

Standard Commercial
Prior Authorization Guidelines

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

Formulary Agents

Drug products that are listed in the Formulary as Prior Authorization (PA) require evaluation, per MedImpact Pharmacy and Therapeutics Committee guidelines, when the member presents a prescription to a network pharmacy. Each request will be reviewed on individual patient need. If the request does not meet the criteria established by the P & T Committee, the request will not be approved and alternative therapy will be recommended.

Non-Formulary Agents

Any product not found in the Formulary listing, or any Formulary updates published by MedImpact**,** shall be considered a Non-Formulary drug. Coverage for non-formulary agents may be applied for in advance. When a member gives a prescription order for a non-formulary drug to a pharmacist, the pharmacist will evaluate the patient's drug history and contact the physician to determine if there is a legitimate medical need for a non-formulary drug. Each request will be reviewed on individual patient need. The following basic criteria are used:

The use of Formulary Drug Products is contraindicated in the patient.
The patient has failed an appropriate trial of Formulary or related agents.
The choices available in the Drug Formulary are not suited for the present patient care need, and the drug selected is required for patient safety.
The use of a Formulary drug may provoke an underlying condition, which would be detrimental to patient care.

If the request does not meet the criteria established by the P & T Committee, the request will not be approved and alternative therapy will be recommended.

Obtaining Coverage

Coverage may be obtained by:

Faxing a completed **Medication Request Form** to MedImpact at (858) 790-7100.
Contacting MedImpact at (800) 788-2949 and providing all necessary information requested.

MedImpact will provide an authorization number, specific for the medical need, for all approved requests. Non-approved requests may be appealed. The prescriber must provide information to support the appeal on the basis of medical necessity.

ABALOPARATIDE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ABALOPARATIDE	TYMLOS	44231		GPI-10 (3004400500)	

GUIDELINES FOR USE

Does the patient have a diagnosis of postmenopausal osteoporosis (ICD-10 M81.0, Group M80.0)?

If yes, continue to #2.
If no, continue to #4.

Is the patient at high risk for fractures defined as **ONE** of the following?
- History of osteoporotic (i.e., fragility, low trauma) fracture(s)
- Two or more risk factors for fracture (e.g., history of multiple recent low trauma fractures, BMD T-score less than or equal to -2.5, corticosteroid use, or use of GnRH analogs such as Synarel [nafarelin])
- No prior treatment for osteoporosis, AND a FRAX score of at least 20% for any major fracture OR at least 3% for hip fracture

If yes, continue to #6.
If no, continue to #3.

Does the patient meet **ONE** of the following criteria?
- The patient is unable to use oral therapy (i.e., upper gastrointestinal [GI] problems - unable to tolerate oral medication, lower GI problems - unable to absorb oral medications, trouble remembering to take oral medications or coordinating an oral bisphosphonate with other oral medications or their daily routine)
- The patient had a trial of, intolerance to, or a contraindication to a bisphosphonate (e.g., Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate])

If yes, continue to #6.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the request to increase bone density in a male patient with osteoporosis (ICD-10 M81.0, Group M80.0)?

If yes, continue to #5.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

ABALOPARATIDE

GUIDELINES FOR USE (CONTINUED)

Is the patient at high risk for fractures defined as **ONE** of the following?
- History of osteoporotic fracture (e.g., fragility, low trauma)
- Multiple risk factors for fracture (e.g., history of multiple recent low trauma fractures, BMD T-score less than or equal to -2.5, corticosteroid use, use of GnRH analogs such as Synarel [nafarelin])
- The patient has failed or is intolerant to other available osteoporosis therapy (e.g., Forteo [teriparatide], Prolia [denosumab], Fosamax [alendronate], Actonel [risedronate])

If yes, continue to #6.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Has the patient received a total of 24 months cumulative treatment with any parathyroid hormone therapy (e.g., Tymlos [abaloparatide], Forteo [teriparatide])?

If yes, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

If no, **approve up to 24 months cumulative lifetime treatment by HICL or GPI-10 with a quantity limit of #1.56mL per 30 days.**

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ABALOPARATIDE (Tymlos)** requires the following rule(s) be met for approval:
The request is for ONE of the following:
- Postmenopausal osteoporosis (a type of bone condition)
- To increase bone density in a male patient with osteoporosis (a type of bone condition)

If you have postmenopausal osteoporosis, approval also requires:
- You have NOT received a total of 24 months or more of treatment with any parathyroid hormone therapy (such as Tymlos [abaloparatide], Forteo [teriparatide])

(Denial text continued on next page)

ABALOPARATIDE

GUIDELINES FOR USE (CONTINUED)

You meet ONE of the following (a, b, or c):
- You are at high risk for fractures defined as ONE of the following:
  - You have a history of osteoporotic (fragility [weakness], low trauma [injury]) fracture(s) (a type of complete or partial break in a bone)
  - You have TWO or more risk factors for a fracture such as a history of multiple recent low trauma fractures, bone mineral density (BMD) T-score (a type of lab test) less than or equal to -2.5, corticosteroid use, or use of GnRH (gonadotropin-releasing hormone) analogs such as Synarel (nafarelin)
  - You have had no prior treatment for osteoporosis, AND you have a FRAX (Fracture Risk Assessment Tool: a type of test) score of at least 20% for any major fracture OR at least 3% for a hip fracture
- You are unable to use oral therapy due to upper gastrointestinal (GI: stomach and intestine) problems (unable to tolerate oral medication), lower GI problems (unable to absorb oral medications), or trouble remembering to take oral medications or cannot plan to use an oral bisphosphonate (such as Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate]) with other oral medications or in your daily routine
- You have tried, have an intolerance to (side effect), or have a contraindication to (harmful for you to use) a bisphosphonate (such as Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate])

If the request is to increase bone density in a male patient with osteoporosis, approval also requires:
- You have NOT received a total of 24 months or more of treatment with any parathyroid hormone therapy (such as Tymlos [abaloparatide], Forteo [teriparatide])
- You meet ONE of the following (a or b):
  - You are at high risk for fractures defined as ONE of the following:
    - You have a history of osteoporotic fracture (a type of complete or partial break in a bone, such as fragility [weakness] fracture, low trauma [injury] fracture)
    - You have multiple risk factors for fracture (such as a history of multiple recent low trauma fractures, bone mineral density [BMD] T-score [a type of lab test] less than or equal to -2.5, corticosteroid use, use of GnRH [gonadotropin-releasing hormone] analogs such as Synarel [nafarelin])
  - You have failed or are intolerant (side effect) to other available osteoporosis therapy (such as Forteo [teriparatide], Prolia [denosumab], Fosamax [alendronate], Actonel [risedronate])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ABATACEPT - IV

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ABATACEPT/ MALTOSE	ORENCIA		26306	GPI-14 (66400010002120)	

NOTE: For requests for the SQ dosage form of Orencia, please see the ABATACEPT - SQ PA guideline.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
- The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying antirheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine

If yes, continue to #2.
If no, continue to #3.

ABATACEPT - IV

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?

The patient had a trial of or contraindication to TWO of the following preferred agents:

- Enbrel (etanercept)
- Adalimumab-ryvk/adalimumab-aaty
- Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])

The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
[**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for a total of 6 months by GPID or GPI-14. Please enter two authorizations as follows:**
FIRST APPROVAL: Approve for 1 month with a quantity limit of #8 per 28 days.
SECOND APPROVAL: Approve for 5 months with a quantity limit of #4 per 28 days (start date is 3 days before the end date of the first approval).

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ABATACEPT - IV

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (PJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient is 6 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PJIA
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz IR (tofacitinib IR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for a total of 6 months by GPID or GPI-14. Please enter two authorizations as follows:**
  FIRST APPROVAL: Approve for 1 month with a quantity limit of #8 per 28 days.
  SECOND APPROVAL: Approve for 5 months with a quantity limit of #4 per 28 days (start date is 3 days before the end date of the first approval).

  If no, continue to #4.

ABATACEPT - IV

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Otezla (apremilast)
  - Tremfya (guselkumab)
  - Skyrizi (risankizumab-rzaa)
  - Taltz (ixekizumab)
  - Bimzelx (bimekizumab-bkzx)
  - Sotyktu (deucravacitinib)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for a total of 6 months by GPID or GPI-14. Please enter two authorizations as follows:**
FIRST APPROVAL: Approve for 1 month with a quantity limit of #8 per 28 days.
SECOND APPROVAL: Approve for 5 months with a quantity limit of #4 per 28 days (start date is 3 days before the end date of the first approval).

If no, continue to #5.

ABATACEPT - IV

INITIAL CRITERIA (CONTINUED)

Is the request for prophylaxis of acute graft versus host disease (aGVHD) and the patient meets **ALL** of the following?
- The patient is 2 years of age or older
- The patient is undergoing hematopoietic stem cell transplantation (HSCT) from a matched or one allele-mismatched unrelated-donor
- Orencia will be used in combination with a calcineurin inhibitor (e.g., cyclosporine, tacrolimus) and methotrexate
- Orencia will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of aGVHD prophylaxis

If yes, **approve for 1 month by GPID or GPI-14 with a quantity limit of #16.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ABATACEPT - IV (Orencia intravenous)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Prophylaxis (prevention) of acute graft versus host disease (aGVHD: a short-term type of immune disorder)

If you have moderate to severe rheumatoid arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Orencia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a conventional synthetic DMARD (disease-modifying antirheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine

(Initial denial text continued on next page)

ABATACEPT - IV

INITIAL CRITERIA (CONTINUED)

You meet ONE of the following:
- You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
- You have tried a tumor necrosis factor (TNF) inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated you cannot use a JAK inhibitor (Janus kinase inhibitor such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

If you have moderate to severe polyarticular juvenile idiopathic arthritis, approval also requires:
- You are 6 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Orencia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz IR (tofacitinib immediate-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

ABATACEPT - IV

RENEWAL CRITERIA

NOTE: For the diagnosis of acute graft versus host disease (aGVHD), please refer to the Initial Criteria section.

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

If yes, continue to #2.
If no, continue to #3.

Does the patient meet **ONE** of the following criteria?
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #4 per 28 days.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

ABATACEPT - IV

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?

The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy

Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

The patient had a trial of or contraindication to TWO of the following preferred agents:

Enbrel (etanercept)
Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
Otezla (apremilast)
Tremfya (guselkumab)
Skyrizi (risankizumab-rzaa)
Taltz (ixekizumab)
Bimzelx (bimekizumab-bkzx)
Sotyktu (deucravacitinib)
Adalimumab-ryvk/adalimumab-aaty
Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
[**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #4 per 28 days.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

ABATACEPT - IV

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ABATACEPT - IV (Orencia intravenous)** requires the following rule(s) be met for renewal:

You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)

If you have moderate to severe rheumatoid arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Orencia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You meet ONE of the following:
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Adalimumab-ryvk/adalimumab-aaty
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - You have tried a tumor necrosis factor (TNF) inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated you cannot use a JAK inhibitor (Janus kinase inhibitor such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

(Renewal denial text continued on next page)

ABATACEPT - IV

RENEWAL CRITERIA (CONTINUED)

If you have moderate to severe polyarticular juvenile idiopathic arthritis, renewal also requires:

You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy

You will NOT use Orencia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)

You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:

Enbrel (etanercept)

Adalimumab-ryvk/adalimumab-aaty

Xeljanz IR (tofacitinib immediate-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

(Renewal denial text continued on next page)

ABATACEPT - IV

RENEWAL CRITERIA (CONTINUED)

If you have psoriatic arthritis, renewal also requires:

- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Orencia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)
- You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
  - Enbrel (etanercept)
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Otezla (apremilast)
  - Tremfya (guselkumab)
  - Skyrizi (risankizumab-rzaa)
  - Taltz (ixekizumab)
  - Bimzelx (bimekizumab-bkzx)
  - Sotyktu (deucravacitinib)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

RATIONALE

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
- The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying antirheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine

If yes, continue to #2.
If no, continue to #3.

ABATACEPT - SQ

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?

The patient had a trial of or contraindication to TWO of the following preferred agents:

Enbrel (etanercept)
Adalimumab-ryvk/adalimumab-aaty
Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])

The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
[**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve all formulations of the 125mg/mL strength for 6 months by GPID or GPI-14 with a quantity limit of #4mL per 28 days.**

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ABATACEPT - SQ

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (PJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PJIA
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz IR (tofacitinib IR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve all strengths and formulations for 6 months by GPID or GPI-14 as follows:**
  50mg/0.4mL: #1.6mL per 28 days.
  87.5mg/0.7mL: #2.8mL per 28 days.
  125mg/mL: #4mL per 28 days.

  If no, continue to #4.

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

  If yes, continue to #5.
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

ABATACEPT - SQ

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?

The patient is 2 to 5 years of age AND had a trial of or contraindication to ONE of the following preferred agents:
- Enbrel (etanercept)
- Xeljanz IR (tofacitinib IR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., Enbrel])
- Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., Enbrel])

The patient is 6 to 17 years of age AND had a trial of or contraindication to TWO of the following preferred agents:
- Enbrel (etanercept)
- Otezla (apremilast)
- Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
- Tremfya (guselkumab)
- Skyrizi (risankizumab-rzaa)
- Xeljanz IR (tofacitinib IR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., Enbrel])
- Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., Enbrel])

The patient is 18 years of age or older AND had a trial of or contraindication to TWO of the following preferred agents:
- Enbrel (etanercept)
- Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
- Otezla (apremilast)
- Tremfya (guselkumab)
- Skyrizi (risankizumab-rzaa)
- Taltz (ixekizumab)
- Bimzelx (bimekizumab-bkzx)
- Sotyktu (deucravacitinib)
- Adalimumab-ryvk/adalimumab-aaty
- Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])

[**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve all strengths and formulations for 6 months by GPID or GPI-14 as follows:**
50mg/0.4mL: #1.6mL per 28 days.
87.5mg/0.7mL: #2.8mL per 28 days.
125mg/mL: #4mL per 28 days.
If no, do not approve.

ABATACEPT - SQ

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: Our guideline named **ABATACEPT - SQ (Orencia subcutaneous)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)

If you have moderate to severe rheumatoid arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Orencia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard-of-care medication: a conventional synthetic DMARD (disease-modifying antirheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- You meet ONE of the following:
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Adalimumab-ryvk/adalimumab-aaty
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - You have tried a tumor necrosis factor (TNF) inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated you cannot use a JAK inhibitor (Janus kinase inhibitor such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

ABATACEPT - SQ

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Orencia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

If yes, continue to #2.
If no, continue to #3.

Does the patient meet **ONE** of the following criteria?
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve all formulations of the 125mg/mL strength for 12 months by GPID or GPI-14 with a quantity limit of #4mL per 28 days.**

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

The patient is 6 to 17 years of age AND had a trial of or contraindication to TWO of the following preferred agents:
- Enbrel (etanercept)
- Otezla (apremilast)
- Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
- Tremfya (guselkumab)
- Skyrizi (risankizumab-rzaa)
- Xeljanz IR (tofacitinib IR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., Enbrel])
- Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., Enbrel])

The patient is 18 years of age or older AND had a trial of or contraindication to TWO of the following preferred agents:
- Enbrel (etanercept)
- Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
- Otezla (apremilast)
- Tremfya (guselkumab)
- Skyrizi (risankizumab-rzaa)
- Taltz (ixekizumab)
- Bimzelx (bimekizumab-bkzx)
- Sotyktu (deucravacitinib)
- Adalimumab-ryvk/adalimumab-aaty
- Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])

[**NOTE**: Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve all strengths & formulations for 12 months by GPID or GPI-14 as follows:**
50mg/0.4mL: #1.6mL per 28 days.
87.5mg/0.7mL: #2.8mL per 28 days.
125mg/mL: #4mL per 28 days.
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

ABATACEPT - SQ

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: Our guideline named **ABATACEPT - SQ (Orencia subcutaneous)** requires the following rule(s) be met for renewal:

You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)

If you have moderate to severe rheumatoid arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Orencia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You meet ONE of the following:
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    Enbrel (etanercept)
    Adalimumab-ryvk/adalimumab-aaty
    Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - You have tried a tumor necrosis factor (TNF) inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated you cannot use a JAK inhibitor (Janus kinase inhibitor such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

PRIOR AUTHORIZATION GUIDELINES

ABEMACICLIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ABEMACICLIB	VERZENIO	44537		GPI-10 (2153101000)	

GUIDELINES FOR USE

Does the patient have a diagnosis of breast cancer (ICD-10 Group C50)?

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the patient's cancer in early stage and the patient meets **ALL** of the following criteria?
- The patient's cancer is hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, node-positive
- Verzenio will be used in combination with endocrine therapy (tamoxifen or an aromatase inhibitor [e.g., anastrozole, letrozole, exemestane]) for adjuvant treatment
- The patient is at high risk of recurrence

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
If no, continue to #3.

Is the patient's cancer advanced or metastatic **AND** the patient meets the following criterion?
- The patient's cancer is hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- Verzenio will be used in combination with an aromatase inhibitor (e.g., anastrozole, letrozole, exemestane) as initial endocrine-based therapy
- Verzenio will be used in combination with fulvestrant (Faslodex) AND the patient has experienced disease progression following endocrine therapy (e.g., anastrozole, letrozole, tamoxifen)
- Verzenio will be used as monotherapy AND the patient has experienced disease progression following endocrine therapy (e.g., anastrozole, letrozole, tamoxifen) and prior chemotherapy in the metastatic setting

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

ABEMACICLIB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ABEMACICLIB (Verzenio)** requires the following rule(s) be met for approval:
You have breast cancer
If you have early breast cancer, approval also requires:
- Your cancer is hormone receptor (HR: a type of protein)-positive, human epidermal growth factor receptor 2 (HER2: a type of protein)-negative, node-positive (cancer that has spread to the lymph nodes)
- Verzenio will be used in combination with endocrine therapy (tamoxifen or an aromatase inhibitor [such as letrozole, anastrozole, exemestane]) for adjuvant (add-on) treatment
- You are at high risk of recurrence (disease returning)

If you have advanced or metastatic breast cancer, approval also requires:
- Your cancer is hormone receptor (HR: a type of protein)-positive, human epidermal growth factor receptor 2 (HER2: a type of protein)-negative
- You meet ONE of the following:
  - Verzenio will be used in combination with an aromatase inhibitor (such as letrozole, anastrozole, exemestane) as initial endocrine (hormone)-based therapy
  - Verzenio will be used in combination with fulvestrant (Faslodex); AND you have experienced disease progression following endocrine therapy (such as letrozole, anastrozole, tamoxifen)
  - Verzenio will be used as monotherapy (one medication treatment); AND you have experienced disease progression following endocrine therapy (such as letrozole, anastrozole, tamoxifen) as well as prior chemotherapy (drugs used to treat cancer) in the metastatic setting (cancer that has spread to other parts of the body)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE
For further information, please refer to the Prescribing Information and/or Drug Monograph for Verzenio.

PRIOR AUTHORIZATION GUIDELINES

ABIRATERONE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ABIRATERONE ACETATE	ZYTIGA, ABIRTEGA, ABIRATERONE ACETATE	37571		GPI-10 (2140601020)	

GUIDELINES FOR USE

Does the patient have **ONE** of the following diagnoses?
Metastatic castration-resistant prostate cancer (mCRPC) (ICD-10 Z19.2, C61)
Metastatic high-risk castration-sensitive prostate cancer (mCSPC) (ICD-10 Z19.1, C61)

If yes, continue to #2.
If no, continue to #5.

Will the requested medication be used in combination with an oral corticosteroid (e.g., prednisone, prednisolone, methylprednisolone)?

If yes, continue to #3.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
The patient had a bilateral orchiectomy
The patient has a castrate level of testosterone (less than 50 ng/dL)
The requested medication will be used concurrently with a gonadotropin-releasing hormone (GnRH) analog (e.g., Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the patient concomitantly using a strong CYP3A4 inducer (e.g., phenytoin, carbamazepine, rifampin, rifabutin, rifapentine, phenobarbital)?

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
250mg: #8 per day.
500mg: #4 per day.

If no, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
250mg: #4 per day.
500mg: #2 per day.

ABIRATERONE

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of metastatic androgen pathway modulation-naive or -sensitive (mAPMN/S) prostate cancer (ICD-10 C61, Z19.1) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- The requested medication will be used in combination with Truqap (capivasertib) and prednisone
- The cancer is PTEN-deficient as detected by an FDA-authorized test

If yes, continue to #6.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient had a bilateral orchiectomy
- The patient has a castrate level of testosterone (less than 50 ng/dL)
- The requested medication will be used concurrently with a gonadotropin-releasing hormone (GnRH) analog (e.g., Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
250 mg: #4 per day.
500 mg: #2 per day.

If no, do not approve.

DENIAL TEXT: Our guideline named **ABIRATERONE (Zytiga, Abirtega)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Metastatic castration-resistant prostate cancer (mCRPC: prostate cancer that has spread to other parts of the body and no longer responds to testosterone lowering treatment)
- Metastatic high-risk castration-sensitive prostate cancer (mCSPC: prostate cancer that has spread to other parts of the body and may respond to testosterone lowering treatment)
- Metastatic androgen pathway modulation-naive or -sensitive (mAPMN/S) prostate cancer (cancer that has spread to other parts of the body and has not been treated with, or may respond to, testosterone-lowering treatment)

ABIRATERONE

GUIDELINES FOR USE (CONTINUED)

If you have metastatic castration-resistant prostate cancer or metastatic high-risk castration-sensitive prostate cancer, approval also requires:
- The requested medication will be used in combination with an oral corticosteroid (such as prednisone, prednisolone, methylprednisolone)
- You meet ONE of the following:
  - You had a bilateral orchiectomy (both testicles have been surgically removed)
  - You have a castrate level of testosterone (your blood testosterone levels are less than 50 ng/dL)
  - The requested medication will be used together with a gonadotropin-releasing hormone (GnRH) analog (such as Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

If you have metastatic androgen pathway modulation-naive or -sensitive prostate cancer, approval also requires:
- You are 18 years of age or older
- The requested medication will be used in combination with Truqap (capivasertib) and prednisone
- Your prostate cancer is PTEN-deficient (loss of a type of gene) as detected by a Food and Drug Administration (FDA)-authorized test
- You meet ONE of the following:
  - You had a bilateral orchiectomy (both testicles have been surgically removed)
  - You have a castrate level of testosterone (your blood testosterone levels are less than 50 ng/dL)
  - The requested medication will be used together with a gonadotropin-releasing hormone (GnRH) analog (such as Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

ABROCITINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ABROCITINIB	CIBINQO	47767		GPI-10 (9027200500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of refractory, moderate to severe atopic dermatitis (AD) (ICD-10 Group L20) and meet **ALL** of the following criteria?

The patient is 12 years of age or older

Therapy is prescribed by or in consultation with a dermatologist, allergist, or immunologist

The patient has atopic dermatitis involving at least 10% of body surface area (BSA) OR atopic dermatitis affecting the face, head, neck, hands, feet, groin, or intertriginous areas

The patient had a trial of or contraindication to THREE of the following preferred agents: Dupixent (dupilumab), Rinvoq (upadacitinib), Adbry (tralokinumab-ldrm), Ebglyss (lebrikizumab- lbkz), Nemluvio (nemolizumab-ilto)

Cibinqo will NOT be used concurrently with another systemic biologic (e.g., Dupixent [dupilumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Eucrisa (crisaborole)]) for the treatment of AD
[**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ABROCITINIB

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: Our guideline named **ABROCITINIB (Cibinqo)** requires the following rule(s) be met for approval:

You have refractory (did not respond to treatment), moderate to severe atopic dermatitis (AD: a type of skin condition)

You are 12 years of age or older

Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor), allergist (a type of allergy doctor), or immunologist (a type of immune system doctor)

You have atopic dermatitis (a type of skin condition) involving at least 10 percent of body surface area (BSA) OR atopic dermatitis affecting the face, head, neck, hands, feet, groin, or intertriginous areas (areas between skin folds)

You have tried or have a contraindication to (harmful for you to use) THREE of the following preferred medications: Dupixent (dupilumab), Rinvoq (upadacitinib), Adbry (tralokinumab-ldrm), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto)

You will NOT use Cibinqo concurrently (at the same time) with another systemic biologic (such as Dupixent [dupilumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Eucrisa (crisaborole)]) for the treatment of atopic dermatitis (a type of skin condition)

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

PRIOR AUTHORIZATION GUIDELINES

ABROCITINIB

RENEWAL CRITERIA

Does the patient have a diagnosis of refractory, moderate to severe atopic dermatitis (AD) (ICD-10 Group L20) and meet **ALL** of the following criteria?

The patient has shown improvement while on Cibinqo

The patient had a trial of or contraindication to THREE of the following preferred agents: Dupixent (dupilumab), Rinvoq (upadacitinib), Adbry (tralokinumab-ldrm), Ebglyss (lebrikizumab- lbkz), Nemluvio (nemolizumab-ilto)

Cibinqo will NOT be used concurrently with another systemic biologic (e.g., Dupixent [dupilumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Eucrisa (crisaborole)]) for the treatment of AD

[**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: Our guideline named **ABROCITINIB (Cibinqo)** requires the following rule(s) be met for renewal:

You have refractory (did not respond to treatment), moderate to severe atopic dermatitis (AD: a type of skin condition)

You have shown improvement while on Cibinqo

You have tried or have a contraindication to (harmful for you to use) THREE of the following preferred medications: Dupixent (dupilumab), Rinvoq (upadacitinib), Adbry (tralokinumab-ldrm), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto)

You will NOT use Cibinqo concurrently (at the same time) with another systemic biologic (such as Dupixent [dupilumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Eucrisa (crisaborole)]) for the treatment of atopic dermatitis (a type of skin condition)

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Cibinqo.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ACALABRUTINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ACALABRUTINIB	CALQUENCE	44607		GPI-10 (2153210300)	
ACALABRUTINIB MALEATE	CALQUENCE	48182		GPI-10 (2153210350)	

GUIDELINES FOR USE

Does the patient have a diagnosis of mantle cell lymphoma (MCL) (ICD-10 Group C83.1) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, continue to #2.
If no, continue to #4.

Is the patient previously untreated and meets **ALL** of the following criteria?
Calquence is being used in combination with bendamustine and rituximab
The patient is ineligible for autologous hematopoietic stem cell transplantation (HSCT)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
If no, continue to #3.

Has the patient received at least one prior therapy (e.g., rituximab, cyclophosphamide, doxorubicin, vincristine, prednisone [R-CHOP])?

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient have a diagnosis of chronic lymphocytic leukemia (CLL) (ICD-10 Group C91.1) or small lymphocytic lymphoma (SLL) (ICD-10 Group C83.0) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
If no, continue to #5.

Is the request for a currently approved US Food and Drug Administration (FDA) indication as listed in the recent manufacturer prescribing information document? (see FDA website for approved drugs indications: https://www.accessdata.fda.gov/scripts/cder/daf/index.cfm)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

ACALABRUTINIB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ACALABRUTINIB (Calquence)** requires the following rules be met for approval:
You have ONE of the following:
- Mantle cell lymphoma (MCL: a type of blood cancer)
- Chronic lymphocytic leukemia (CLL: a type of blood cancer)
- Small lymphocytic lymphoma (SLL: a type of blood cancer)
- A currently approved US Food and Drug Administration (FDA) indication as listed in the recent manufacturer prescribing information document

If you have untreated mantle cell lymphoma, approval also requires:
- You are 18 years of age or older
- Calquence will be used in combination with bendamustine and rituximab
- You are NOT eligible for autologous hematopoietic stem cell transplantation (HSCT: a type of procedure to replace damaged bone marrow with your own healthy blood-forming cells)

If you have previously treated mantle cell lymphoma, approval also requires:
- You are 18 years of age or older
- You have received at least one prior therapy (such as R-CHOP [rituximab, cyclophosphamide, doxorubicin, vincristine, prednisone])

If you have chronic lymphocytic leukemia or small lymphocytic lymphoma, approval also requires:
- You are 18 years of age or older

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Calquence.

GUIDELINES FOR USE

Is the claim denying for an age limit, as noted in the POS reject message?

If yes, continue to #2.
If no, guideline does not apply.

Is the request for a cosmetic indication (e.g., melasma, photoaging, or wrinkles)?

If yes, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.
If no, continue to #3.

Has the patient had a trial of **TWO** low cost, clinical standard of care generic agents (e.g., adapalene cream or gel, tretinoin cream or gel, adapalene/benzoyl peroxide gel)?

If yes, **approve the requested agent for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ACNE AGE RESTRICTION OVERRIDE** requires the following rule(s) be met for approval:
Your request is NOT for a cosmetic indication (not for improving appearance, such as for melasma [freckle-like spots on the skin], photoaging [sun-damaged skin], wrinkles)
You had a trial of TWO low cost, clinical standard of care generic medications (such as adapalene lotion, cream or gel, tretinoin cream or gel, adapalene/benzoyl peroxide gel)

PRIOR AUTHORIZATION GUIDELINES

ACORAMIDIS

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ACORAMIDIS HCL	ATTRUBY	50022		GPI-10 (4055001030)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of cardiomyopathy of wild-type transthyretin-mediated amyloidosis (ICD-10 E85.82) or variant transthyretin-mediated amyloidosis (ATTR-CM) (ICD-10 E85.4) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a cardiologist, transthyretin amyloidosis (ATTR) specialist, or medical geneticist
- The patient has New York Heart Association (NYHA) Class I, II, or III heart failure
- Attruby will NOT be used concurrently with a transthyretin stabilizer (tafamidis [Vyndamax], tafamidis meglumine [Vyndaqel]) or transthyretin silencer (vutrisiran [Amvuttra]) for the treatment of ATTR-CM

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's diagnosis confirmed by **ONE** of the following?
- A bone scan (scintigraphy) strongly positive for myocardial uptake of TC-99m-PYP *(**Note:** Strongly positive defined as Grade 2 or 3 uptake using the Perugini Grade 1-3 scoring system)*
- A biopsy of tissue of affected organ(s) (cardiac and possibly non-cardiac sites) to confirm amyloid presence AND chemical typing to confirm presence of transthyretin (TTR) protein

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per day.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ACORAMIDIS

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ACORAMIDIS (Attruby)** requires the following rule(s) be met for approval:
You have cardiomyopathy of wild-type or variant transthyretin-mediated amyloidosis (ATTR-CM: heart disease caused by a build-up of a type of protein)
You are 18 years of age or older
Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor), transthyretin amyloidosis (ATTR) specialist, or medical geneticist (doctor who treats gene disorders)
You have New York Heart Association (NYHA) Class I, II, or III heart failure (classification of heart failure symptoms)
You will NOT use Attruby concurrently (at the same time) with a transthyretin stabilizer (tafamidis [Vyndamax], tafamidis meglumine [Vyndaqel]) or transthyretin silencer (vutrisiran [Amvuttra]) for the treatment of cardiomyopathy of wild-type or variant transthyretin-mediated amyloidosis (heart disease caused by a build-up of a type of protein)
Your diagnosis is confirmed by ONE of the following:
- A bone scan (scintigraphy) strongly positive for myocardial uptake of TC-99m-PYP (a type of imaging test) (Note: Strongly positive defined as Grade 2 or 3 uptake using the Perugini Grade 1-3 scoring system)
- A biopsy of tissue of the affected organ(s) (removal of cells or tissue from the body for examination) (can be heart or non-heart related organs) to confirm amyloid (type of protein) presence AND chemical typing to confirm presence of transthyretin (TTR) protein

ACORAMIDIS

RENEWAL CRITERIA

Does the patient have a diagnosis of cardiomyopathy of wild-type transthyretin-mediated amyloidosis (ICD-10 E85.82) or variant transthyretin-mediated amyloidosis (ATTR-CM) (ICD-10 E85.4) **AND** meet the following criterion?
Attruby will NOT be used concurrently with a transthyretin stabilizer (tafamidis [Vyndamax], tafamidis meglumine [Vyndaqel]) or transthyretin silencer (vutrisiran [Amvuttra]) for the treatment of ATTR-CM

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ACORAMIDIS (Attruby)** requires the following rule(s) be met for renewal:
You have cardiomyopathy of wild-type or variant transthyretin-mediated amyloidosis (ATTR-CM: heart disease caused by a build-up of a type of protein)
You will NOT use Attruby concurrently (at the same time) with a transthyretin stabilizer (tafamidis [Vyndamax], tafamidis meglumine [Vyndaqel]) or transthyretin silencer (vutrisiran [Amvuttra]) for the treatment of cardiomyopathy of wild-type or variant transthyretin- mediated amyloidosis (heart disease caused by a build-up of a type of protein)

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Attruby.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ADAGRASIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ADAGRASIB	KRAZATI	48522		GPI-10 (2153241000)	

GUIDELINES FOR USE

Does the patient have a diagnosis of locally advanced or metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's cancer has a KRAS G12C mutation as determined by an FDA-approved test
The patient has received at least one prior systemic therapy

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #6 per day.**
If no, continue to #2.

Does the patient have a diagnosis of locally advanced or metastatic colorectal cancer (CRC) (ICD- 10 C19) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's cancer has a KRAS G12C mutation as determined by an FDA-approved test
Krazati will be used in combination with Erbitux (cetuximab)
The patient has received prior treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #6 per day.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADAGRASIB (Krazati)** requires the following rule(s) be met for approval:
You have ONE of the following:
Locally advanced or metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread to nearby tissue or lymph nodes or to other parts of the body)
Locally advanced or metastatic colorectal cancer (CRC: a type of digestive tract cancer that has spread to nearby tissue or lymph nodes or to other parts of the body)
If you have locally advanced or metastatic non-small cell lung cancer, approval also requires:
You are 18 years of age or older
Your cancer has a KRAS G12C mutation (a type of abnormal gene) as determined by a Food and Drug Administration (FDA)-approved test
You have received at least one prior systemic therapy
(Denial text continued on next page)

ADALIMUMAB-AATY

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ADALIMUMAB-AATY	ADALIMUMAB-AATY	48955		GPI-10 (6627001503)	GENERIC ONLY

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-ryvk for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #2.

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (pJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Enbrel [etanercept]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of pJIA

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-ryvk for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #3.

ADALIMUMAB-AATY

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-ryvk for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #4.

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS
- The patient had a trial of or contraindication to the clinical standard of care agent: an NSAID (e.g., ibuprofen, naproxen, meloxicam)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-ryvk for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #5.

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

If yes, continue to #6.
If no, continue to #8.

CONTINUED ON NEXT PAGE

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient has had at least a 3-month trial of one clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy) for the treatment of PsO
- The patient has a contraindication or intolerance to both clinical standard of care therapies: an immunosuppressant and PUVA (phototherapy) for the treatment of PsO
- The patient is switching from a different biologic (e.g., Remicade [infliximab]), PDE-4 inhibitor (e.g., Otezla [apremilast]), or JAK inhibitor for the same indication

If yes, continue to #7.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient was previously stable on another biologic and is switching to adalimumab-aaty
- The patient has psoriasis covering 3 percent or more of body surface area (BSA)
- The patient has psoriatic lesions affecting the hands, feet, genital area, face, or scalp

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #4 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-ryvk.)

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ADALIMUMAB-AATY

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe Crohn's disease (CD) (ICD-10 Group K50) and meet **ALL** of the following criteria?
The patient is 6 years of age or older
Therapy is prescribed by or in consultation with a gastroenterologist
Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of CD

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #3 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-ryvk.)

If no, continue to #9.

Does the patient have a diagnosis of moderate to severe ulcerative colitis (UC) (ICD-10 Group K51) and meet **ALL** of the following criteria?
The patient is 5 years of age or older
Therapy is prescribed by or in consultation with a gastroenterologist
Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of UC

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #4 per 28 days. (PAC NOTE: Enter a proactive PA for adalimumab-ryvk for 6 months by HICL or GPI-10 with a quantity limit of #4 per 28 days).**

If no, continue to #10.

ADALIMUMAB-AATY

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe hidradenitis suppurativa (HS) (ICD-10 L73.2) and meet **ALL** of the following criteria?
The patient is 12 years of age or older
Therapy is prescribed by or in consultation with a dermatologist
Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Cosentyx [secukinumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HS

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #4 per 28 days. (PAC NOTE: Enter a proactive PA for adalimumab-ryvk for 4 months by HICL or GPI-10 with a quantity limit of #4 per 28 days).**

If no, continue to #11.

Does the patient have a diagnosis of non-infectious intermediate uveitis or panuveitis (ICD-10 Group H44.11) and meet **ALL** of the following criteria?
The patient is 2 years of age or older
Therapy is prescribed by or in consultation with an ophthalmologist
The patient does NOT have isolated anterior uveitis
Adalimumab-aaty will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #4 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-ryvk.)

If no, continue to #12.

ADALIMUMAB-AATY

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of non-infectious posterior uveitis and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist
- The patient does NOT have isolated anterior uveitis
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis
- The patient had a trial of or contraindication to ONE of the following clinical standard of care agents: a glucocorticoid (e.g., methylprednisolone, prednisone), a systemic antimetabolite (e.g., methotrexate, cyclosporine, azathioprine, tacrolimus, mycophenolate mofetil)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #4 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-ryvk.)

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADALIMUMAB-AATY (Yuflyma)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (pJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Moderate to severe Crohn's disease (CD: a type of bowel disorder)
- Moderate to severe ulcerative colitis (UC: a type of digestive disorder)
- Moderate to severe hidradenitis suppurativa (HS: a type of skin condition)
- Non-infectious intermediate, posterior, or panuveitis (a type of eye condition)

(Initial denial text continued on next page)

ADALIMUMAB-AATY

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe rheumatoid arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)

If you have moderate to severe polyarticular juvenile idiopathic arthritis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Enbrel [etanercept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)

If you have psoriatic arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or dermatologist (a type of skin doctor)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)

(Initial denial text continued on next page)

ADALIMUMAB-AATY

INITIAL CRITERIA (CONTINUED)

If you have ankylosing spondylitis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: an NSAID (non-steroidal anti-inflammatory drug, such as ibuprofen, naproxen, meloxicam)

If you have moderate to severe plaque psoriasis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)
- You meet ONE of the following:
  - You have had at least a 3-month trial of one clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis
  - You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of drug that decreases the body's immune response) and PUVA (phototherapy) for the treatment of plaque psoriasis
  - You are switching from a different biologic (such as Remicade [infliximab]), PDE-4 (phosphodiesterase-4) inhibitor (such as Otezla [apremilast]), or JAK (Janus kinase) inhibitor for the same indication
- You meet ONE of the following:
  - You were previously stable on another biologic and are switching to adalimumab-aaty
  - You have psoriasis covering 3 percent or more of body surface area (BSA)
  - You have psoriatic lesions (rashes) affecting the hands, feet, genital area, face, or scalp

(Initial denial text continued on next page)

ADALIMUMAB-AATY

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe Crohn's disease, approval also requires:
- You are 6 years of age or older
- Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of Crohn's disease (a type of bowel disorder)

If you have moderate to severe ulcerative colitis, approval also requires:
- You are 5 years of age or older
- Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ulcerative colitis (a type of digestive disorder)

If you have moderate to severe hidradenitis suppurativa, approval also requires:
- You are 12 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Cosentyx [secukinumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of hidradenitis suppurativa (a type of skin disorder)

If you have non-infectious intermediate, posterior, or panuveitis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor)
- You do NOT have isolated anterior uveitis (a different type of eye inflammation)
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of uveitis (a type of eye condition)
- If you have non-infectious posterior uveitis (a type of eye condition), approval also requires you have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medications: a glucocorticoid (such as methylprednisolone, prednisone), a systemic antimetabolite (such as methotrexate, cyclosporine, azathioprine, tacrolimus, mycophenolate mofetil)

ADALIMUMAB-AATY

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per 28 days**.
If no, continue to #2.

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (pJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Enbrel [etanercept]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of pJIA

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #3.

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #4.

ADALIMUMAB-AATY

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient has experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) while on therapy
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #5.

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient has achieved or maintained clear or minimal disease or a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more while on therapy
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #6.

Does the patient have a diagnosis of moderate to severe Crohn's disease (CD) (ICD-10 Group K50) **AND** meet the following criterion?
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of CD

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #7.

Does the patient have a diagnosis of moderate to severe ulcerative colitis (UC) (ICD-10 Group K51) **AND** meet the following criterion?
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of UC

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per 28 days.**
If no, continue to #8.

ADALIMUMAB-AATY

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe hidradenitis suppurativa (HS) (ICD-10 L73.2) and meet **ALL** of the following criteria?
- The patient has shown improvement in HS symptoms
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic (e.g., Cosentyx [secukinumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HS

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per 28 days.**
If no, continue to #9.

Does the patient have a diagnosis of non-infectious intermediate, posterior, or panuveitis (ICD-10 Group H44.11) and meet **ALL** of the following criteria?
- Adalimumab-aaty will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis
- The patient has maintained quiescence OR has improved or maintained symptomatic improvement (e.g., eye redness, pain, photophobia, floaters, blurred vision)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

ADALIMUMAB-AATY

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADALIMUMAB-AATY (Yuflyma)** requires the following rule(s) be met for renewal:

You have ONE of the following:

- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (pJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Moderate to severe Crohn's disease (CD: a type of bowel disorder)
- Moderate to severe ulcerative colitis (UC: a type of digestive disorder)
- Moderate to severe hidradenitis suppurativa (HS: a type of skin condition)
- Non-infectious intermediate, posterior, or panuveitis (a type of eye condition)

If you have moderate to severe rheumatoid arthritis, renewal also requires:

- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy

If you have moderate to severe polyarticular juvenile idiopathic arthritis, renewal also requires:

- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Enbrel [etanercept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)

(Renewal denial text continued on next page)

ADALIMUMAB-AATY

RENEWAL CRITERIA (CONTINUED)

If you have psoriatic arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)

If you have ankylosing spondylitis, renewal also requires:
- You have experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI: diagnostic test which allows a physician to determine the effectiveness of a current medication) while on therapy
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)

If you have moderate to severe plaque psoriasis, renewal also requires:
- You have achieved or maintained clear or minimal disease or a decrease in PASI (Psoriasis Area and Severity Index: used to measure the severity and extent of psoriasis) of at least 50 percent or more while on therapy
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)

If you have moderate to severe Crohn's disease, renewal also requires:
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of Crohn's disease (a type of bowel disorder)

If you have moderate to severe ulcerative colitis, renewal also requires:
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ulcerative colitis (a type of digestive disorder)

(Renewal denial text continued on next page)

ADALIMUMAB-AATY

RENEWAL CRITERIA (CONTINUED)

If you have moderate to severe hidradenitis suppurativa, renewal also requires:
- You have shown improvement in your hidradenitis suppurativa symptoms
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic (such as Cosentyx [secukinumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of hidradenitis suppurativa (a type of skin condition)

If you have non-infectious intermediate, posterior, and panuveitis, renewal also requires:
- You will NOT use adalimumab-aaty concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of uveitis (a type of eye condition)
- You have maintained quiescence (inactive disease) OR have improved or maintained symptomatic improvement (such as eye redness, pain, photophobia [sensitivity to light], floaters, blurred vision)

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (PJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- The requested medication will NOT be used concurrently with another systemic biologic (e.g., Enbrel [etanercept]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PJIA

If yes, **approve for 6 months by GPID or GPI-14 with a quantity limit of #0.2mL per 28 days.**
If no, continue to #2.

Does the patient have a diagnosis of non-infectious intermediate uveitis or panuveitis (ICD-10 Group H44.11) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist
- The patient does NOT have isolated anterior uveitis
- The requested medication will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis

If yes, **approve for 6 months by GPID or GPI-14 with a quantity limit of #0.2mL per 28 days.**
If no, continue to #3.

Does the patient have a diagnosis of non-infectious posterior uveitis and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist
- The patient does NOT have isolated anterior uveitis
- The requested medication will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis
- The patient had a trial of or contraindication to ONE of the following clinical standard of care agents: a glucocorticoid (e.g., methylprednisolone, prednisone), a systemic antimetabolite (e.g., methotrexate, cyclosporine, azathioprine, tacrolimus, mycophenolate mofetil)

If yes, **approve for 6 months by GPID or GPI-14 with a quantity limit of #0.2mL per 28 days.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ADALIMUMAB-ADAZ

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADALIMUMAB-ADAZ** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
- Non-infectious intermediate, posterior, or panuveitis (a type of eye condition)

If you have moderate to severe polyarticular juvenile idiopathic arthritis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic (such as Enbrel [etanercept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)

If you have non-infectious intermediate, posterior, or panuveitis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor)
- You do NOT have isolated anterior uveitis (a different type of eye inflammation)
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of uveitis (a type of eye condition)
- If you have non-infectious posterior uveitis (a type of eye condition), approval also requires you have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medications: a glucocorticoid (such as methylprednisolone, prednisone), a systemic antimetabolite (such as methotrexate, cyclosporine, azathioprine, tacrolimus, mycophenolate mofetil)

ADALIMUMAB-ADAZ

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (PJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- The requested medication will NOT be used concurrently with another systemic biologic (e.g., Enbrel [etanercept]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PJIA

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #0.2mL per 28 days.**
If no, continue to #2.

Does the patient have a diagnosis of non-infectious intermediate, posterior, or panuveitis (ICD-10 Group H44.11) and meet **ALL** of the following criteria?
- The requested medication will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis
- The patient has maintained quiescence OR has improved or maintained symptomatic improvement (e.g., eye redness, pain, photophobia, floaters, blurred vision)

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #0.2mL per 28 days.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

ADALIMUMAB-ADAZ

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADALIMUMAB-ADAZ** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
- Non-infectious intermediate, posterior, or panuveitis (a type of eye condition)

If you have moderate to severe polyarticular juvenile idiopathic arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic (such as Enbrel [etanercept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)

If you have non-infectious intermediate, posterior, or panuveitis, renewal also requires:
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of uveitis (a type of eye condition)
- You have maintained quiescence (inactive disease) OR have improved or maintained symptomatic improvement (such as eye redness, pain, photophobia [sensitivity to light], floaters, blurred vision)

ADALIMUMAB-RYVK	ADALIMUMAB-RYVK	49415		GPI-10 (6627001540)	GENERIC ONLY

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-aaty for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #2.

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (pJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Enbrel [etanercept]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of pJIA

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-aaty for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #3.

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-aaty for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #4.

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS
- The patient had a trial of or contraindication to the clinical standard of care agent: an NSAID (e.g., ibuprofen, naproxen, meloxicam)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (NOTE: Enter a proactive PA for adalimumab-aaty for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days).**

If no, continue to #5.

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

If yes, continue to #6.
If no, continue to #8.

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient has had at least a 3-month trial of one clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy) for the treatment of PsO
- The patient has a contraindication or intolerance to both clinical standard of care therapies: an immunosuppressant and PUVA (phototherapy) for the treatment of PsO
- The patient is switching from a different biologic (e.g., Remicade [infliximab]), PDE-4 inhibitor (e.g., Otezla [apremilast]), or JAK inhibitor for the same indication

If yes, continue to #7.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient was previously stable on another biologic and is switching to adalimumab-ryvk
- The patient has psoriasis covering 3 percent or more of body surface area (BSA)
- The patient has psoriatic lesions affecting the hands, feet, genital area, face, or scalp

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #4 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-aaty.)

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe Crohn's disease (CD) (ICD-10 Group K50) and meet **ALL** of the following criteria?
The patient is 6 years of age or older
Therapy is prescribed by or in consultation with a gastroenterologist
Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of CD

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #3 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-aaty.)

If no, continue to #9.

Does the patient have a diagnosis of moderate to severe ulcerative colitis (UC) (ICD-10 Group K51) and meet **ALL** of the following criteria?
The patient is 5 years of age or older
Therapy is prescribed by or in consultation with a gastroenterologist
Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of UC

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #4 per 28 days. (PAC NOTE: Enter a proactive PA for adalimumab-aaty for 6 months by HICL or GPI-10 with a quantity limit of #4 per 28 days.)**

If no, continue to #10.

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe hidradenitis suppurativa (HS) (ICD-10 L73.2) and meet **ALL** of the following criteria?
- The patient is 12 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Cosentyx [secukinumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HS

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #4 per 28 days. (PAC NOTE: Enter a proactive PA for adalimumab-aaty for 4 months by HICL or GPI-10 with a quantity limit of #4 per 28 days)**

If no, continue to #11.

Does the patient have a diagnosis of non-infectious intermediate uveitis or panuveitis (ICD-10 Group H44.11) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist
- The patient does NOT have isolated anterior uveitis
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #4 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-aaty.)

If no, continue to #12.

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of non-infectious posterior uveitis and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist
- The patient does NOT have isolated anterior uveitis
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis
- The patient had a trial of or contraindication to ONE of the following clinical standard of care agents: a glucocorticoid (e.g., methylprednisolone, prednisone), a systemic antimetabolite (e.g., methotrexate, cyclosporine, azathioprine, tacrolimus, mycophenolate mofetil)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #4 per 28 days.)**
(NOTE: Enter a proactive PA for 6 months by HICL or GPI-10 as stated above for adalimumab-aaty.)

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADALIMUMAB-RYVK (Simlandi)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (pJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Moderate to severe Crohn's disease (CD: a type of bowel disorder)
- Moderate to severe ulcerative colitis (UC: a type of digestive disorder)
- Moderate to severe hidradenitis suppurativa (HS: a type of skin condition)
- Non-infectious intermediate, posterior, or panuveitis (a type of eye condition)

(Initial denial text continued on next page)

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe rheumatoid arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)

If you have moderate to severe polyarticular juvenile idiopathic arthritis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Enbrel [etanercept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)

If you have psoriatic arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or dermatologist (a type of skin doctor)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

If you have ankylosing spondylitis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: an NSAID (non-steroidal anti-inflammatory drug, such as ibuprofen, naproxen, meloxicam)

If you have moderate to severe plaque psoriasis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)
- You meet ONE of the following:
  - You have had at least a 3-month trial of one clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis
  - You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of drug that decreases the body's immune response) and PUVA (phototherapy) for the treatment of plaque psoriasis
  - You are switching from a different biologic (such as Remicade [infliximab]), PDE-4 (phosphodiesterase-4) inhibitor (such as Otezla [apremilast]), or JAK (Janus kinase) inhibitor for the same indication
- You meet ONE of the following:
  - You were previously stable on another biologic and are switching to adalimumab-ryvk
  - You have psoriasis covering 3 percent or more of body surface area (BSA)
  - You have psoriatic lesions (rashes) affecting the hands, feet, genital area, face, or scalp

ADALIMUMAB-RYVK

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe Crohn's disease, approval also requires:
- You are 6 years of age or older
- Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of Crohn's disease (a type of bowel disorder)

If you have moderate to severe ulcerative colitis, approval also requires:
- You are 5 years of age or older
- Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ulcerative colitis (a type of digestive disorder)

If you have moderate to severe hidradenitis suppurativa, approval also requires:
- You are 12 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Cosentyx [secukinumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of hidradenitis suppurativa (a type of skin condition)

If you have non-infectious intermediate, posterior, or panuveitis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor)
- You do NOT have isolated anterior uveitis (a different type of eye inflammation)
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of uveitis (a type of eye condition)
- If you have non-infectious posterior uveitis (a type of eye condition), approval also requires you have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medications: a glucocorticoid (such as methylprednisolone, prednisone), a systemic antimetabolite (such as methotrexate, cyclosporine, azathioprine, tacrolimus, mycophenolate mofetil)

ADALIMUMAB-RYVK

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per 28 days**.
If no, continue to #2.

Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (pJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Enbrel [etanercept]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of pJIA

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #3.

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #4.

ADALIMUMAB-RYVK

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient has experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) while on therapy
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #5.

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient has achieved or maintained clear or minimal disease or a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more while on therapy
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #6.

Does the patient have a diagnosis of moderate to severe Crohn's disease (CD) (ICD-10 Group K50) **AND** meet the following criterion?
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of CD

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, continue to #7.

Does the patient have a diagnosis of moderate to severe ulcerative colitis (UC) (ICD-10 Group K51) **AND** meet the following criterion?
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Remicade [infliximab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of UC

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per 28 days.**
If no, continue to #8.

ADALIMUMAB-RYVK

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of moderate to severe hidradenitis suppurativa (HS) (ICD-10 L73.2) and meet **ALL** of the following criteria?
- The patient has shown improvement in HS symptoms
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic (e.g., Cosentyx [secukinumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HS

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per 28 days.**
If no, continue to #9.

Does the patient have a diagnosis of non-infectious intermediate, posterior, or panuveitis (ICD-10 Group H44.11) and meet **ALL** of the following criteria?
- Adalimumab-ryvk will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of uveitis
- The patient has maintained quiescence OR has improved or maintained symptomatic improvement (e.g., eye redness, pain, photophobia, floaters, blurred vision)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per 28 days.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

ADALIMUMAB-RYVK

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADALIMUMAB-RYVK (Simlandi)** requires the following rule(s) be met for renewal:

You have ONE of the following:

- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Moderate to severe polyarticular juvenile idiopathic arthritis (pJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Moderate to severe Crohn's disease (CD: a type of bowel disorder)
- Moderate to severe ulcerative colitis (UC: a type of digestive disorder)
- Moderate to severe hidradenitis suppurativa (HS: a type of skin condition)
- Non-infectious intermediate, posterior, or panuveitis (a type of eye condition)

If you have moderate to severe rheumatoid arthritis, renewal also requires:

- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy

If you have moderate to severe polyarticular juvenile idiopathic arthritis, renewal also requires:

- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Enbrel [etanercept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)

(Renewal denial text continued on next page)

ADALIMUMAB-RYVK

RENEWAL CRITERIA (CONTINUED)

If you have psoriatic arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)

If you have ankylosing spondylitis, renewal also requires:
- You have experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI: diagnostic test which allows a physician to determine the effectiveness of a current medication) while on therapy
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)

If you have moderate to severe plaque psoriasis, renewal also requires:
- You have achieved or maintained clear or minimal disease or a decrease in PASI (Psoriasis Area and Severity Index: used to measure the severity and extent of psoriasis) of at least 50 percent or more while on therapy
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)

If you have moderate to severe Crohn's disease, renewal also requires:
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of Crohn's disease (a type of bowel disorder)

If you have moderate to severe ulcerative colitis, renewal also requires:
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Remicade [infliximab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of ulcerative colitis (a type of digestive disorder)

(Renewal denial text continued on next page)

ADALIMUMAB-RYVK

RENEWAL CRITERIA (CONTINUED)

If you have moderate to severe hidradenitis suppurativa, renewal also requires:
- You have shown improvement in your hidradenitis suppurativa symptoms
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic (such as Cosentyx [secukinumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of hidradenitis suppurativa (a type of skin condition)

If you have non-infectious intermediate, posterior, or panuveitis, renewal also requires:
- You will NOT use adalimumab-ryvk concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of uveitis (a type of eye condition)
- You have maintained quiescence (inactive disease) OR have improved or maintained symptomatic improvement (such as eye redness, pain, photophobia [sensitivity to light], floaters, blurred vision)

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ADAMTS13 RECOMBINANT-KRHN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ADAMTS13, RECOMBINANT-KRHN	ADZYNMA	49300		GPI-10 (8518200530)	

GUIDELINES FOR USE

Does the patient have a diagnosis of congenital thrombotic thrombocytopenic purpura (cTTP) (ICD- 10 D69.42)?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADAMTS13 RECOMBINANT-KRHN (Adzynma)** requires the following rule(s) be met for approval:
You have congenital thrombotic thrombocytopenic purpura (cTTP: a type of blood disorder)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Adzynma.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ADAPALENE-BENZOYL-CLINDAMYCIN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ADAPALENE/BENZOYL/ CLINDAMYCIN	CABTREO	46076		GPI-10 (9005990302)	BRAND = CABTREO

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of acne vulgaris (ICD-10 L70.0) and meet **ALL** of the following criteria?

The patient is 12 years of age or older

Cabtreo will NOT be used concurrently with other single source brand acne agents (e.g., Aklief, Winlevi)

The patient had a trial of or contraindication to ONE clinical standard of care agent in EACH of the following categories: a benzoyl peroxide product, a topical retinoid (e.g., adapalene, tretinoin), a topical antibiotic (e.g., clindamycin, erythromycin)

If yes, **approve for 12 weeks by HICL or GPI-10.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADAPALENE-BENZOYL-CLINDAMYCIN (Cabtreo)** requires the following rule(s) be met for approval:

You have acne vulgaris (a type of skin condition usually called pimples)

You are 12 years of age or older

Cabtreo will NOT be used at the same time with other acne therapies that are only available as brand name (such as Aklief, Winlevi)

You have tried or have a contraindication to (harmful for you to use) ONE clinical standard of care medication in EACH of the following categories:
- Benzoyl peroxide product
- Topical retinoid (such as adapalene, tretinoin)
- Topical antibiotic (such as clindamycin, erythromycin)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ADO-TRASTUZUMAB EMTANSINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ADO-TRASTUZUMAB EMTANSINE	KADCYLA	40046		GPI-10 (2135507030)	

GUIDELINES FOR USE

Does the patient have a diagnosis of breast cancer (ICD-10 Group C50)?

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the patient's cancer metastatic and the patient meets **ALL** of the following criteria?
The patient's cancer is HER2-positive
The patient has previously received trastuzumab and a taxane (e.g., docetaxel, paclitaxel)
The patient has received prior therapy for metastatic disease OR has developed disease recurrence during or within 6 months of completing adjuvant therapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Is the patient's cancer in early stage and the patient meets **ALL** of the following criteria?
The patient's cancer is HER2-positive
The patient has residual invasive disease after neoadjuvant taxane (e.g., docetaxel, paclitaxel) and trastuzumab-based treatment

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

ADO-TRASTUZUMAB EMTANSINE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADO-TRASTUZUMAB EMTANSINE (Kadcyla)** requires the following rule(s) be met for approval:
You have breast cancer
If you have metastatic breast cancer (cancer that has spread to other parts of the body), approval also requires:
- Your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-positive
- You have previously received trastuzumab and a taxane (such as docetaxel, paclitaxel)
- You have received prior therapy for metastatic disease OR have developed disease recurrence (disease has returned) during or within 6 months of completing adjuvant (add-on) therapy

If you have early breast cancer (cancer has not spread to other parts of the body), approval also requires:
- Your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-positive
- You have residual (remaining) invasive disease after neoadjuvant (given before main treatment) taxane and trastuzumab-based treatment (types of cancer treatment)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE
For further information, please refer to the Prescribing Information and/or Drug Monograph for Kadcyla.

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ADUCANUMAB-AVWA	ADUHELM	47421		GPI-10 (6205051010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of Alzheimer's disease (ICD-10 Group G30) and meet **ALL** of the following criteria?
- The patient has mild cognitive impairment or mild dementia
- Therapy is prescribed by or in consultation with a neurologist, geriatrician, or psychiatrist
- The patient has the presence of amyloid-beta plaques
- The patient has a Clinical Dementia Rating (CDR) global score of 0.5 or 1.0, OR a Mini Mental Status Exam (MMSE) score of 24-30
- The patient had a baseline brain MRI within one year prior to treatment
- The patient does NOT have a history of a clotting disorder
- The patient is participating in an FDA/NIH approved clinical trial
- The patient is NOT concurrently using any anticoagulant or antiplatelet therapy (e.g., Xarelto [rivaroxaban], Pradaxa [dabigatran], Plavix [clopidogrel], Effient [prasugrel]), except for aspirin at 81mg daily or less

If yes, **approve for 6 months by HICL or GPI-10 for #1 fill per 21 days.**
If no, do not approve.
INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ADUCANUMAB-AVWA (Aduhelm)** requires the following rule(s) be met for approval:
- You have Alzheimer's disease (a progressive brain disorder that slowly destroys memory and thinking skills)
- You have mild cognitive impairment (decreased ability to process, understand, store and remember information) or mild dementia (a type of memory disorder) due to Alzheimer's disease
- Therapy is prescribed by or in consultation with a neurologist (a type of brain doctor), geriatrician (a doctor who specializes in the health care of elderly individuals), or psychiatrist (a type of mental health doctor)
- You have the presence of amyloid-beta plaques (an indicator of Alzheimer's disease)
- You have a Clinical Dementia Rating (CDR: a tool for evaluating memory loss) global score of 0.5 or 1.0, OR a Mini Mental Status Exam (MMSE: a test used to evaluate memory, thinking, and understanding) score of 24 to 30

(Initial denial text continued on next page)

AFATINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AFATINIB DIMALEATE	GILOTRIF	40478		GPI-10 (2136000610)	

GUIDELINES FOR USE

Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
- The patient's tumor has a non-resistant epidermal growth factor receptor (EGFR) mutation as detected by an FDA-approved test
- Gilotrif will NOT be used concurrently with an epidermal growth factor receptor (EGFR) tyrosine kinase-inhibitor (e.g., Tarceva [erlotinib], Tagrisso [osimertinib], Iressa [gefitinib])

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, continue to #2.

Does the patient have a diagnosis of metastatic squamous non-small cell lung cancer (NSCLC) (ICD-10 Group C34) **AND** meet the following criterion?
- The patient's disease has progressed after platinum-based chemotherapy (i.e., cisplatin, carboplatin, oxaliplatin)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AFATINIB (Gilotrif)** requires the following rule(s) be met for approval:
You have non-small cell lung cancer (NSCLC: type of lung cancer)

If you have metastatic non-small cell lung cancer (cancer that has spread to other parts of the body), approval also requires:
- Your tumor has a non-resistant epidermal growth factor receptor (EGFR: type of protein) mutation as shown by an FDA (Food and Drug Administration)-approved test
- You will NOT use Gilotrif concurrently (at the same time) with an epidermal growth factor receptor (EGFR) tyrosine kinase-inhibitor (such as Tarceva [erlotinib], Tagrisso [osimertinib], Iressa [gefitinib])

If you have metastatic squamous non-small cell lung cancer (cancer began in the squamous cells of the lung and has spread to other parts of the body), approval also requires:
- Your disease has progressed (worsened) after using platinum-based chemotherapy (cisplatin, carboplatin, oxaliplatin)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

AFICAMTEN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AFICAMTEN	MYQORZO	51071		GPI-10 (4019000500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of symptomatic obstructive hypertrophic cardiomyopathy (HCM) (ICD-10 I42.1) and meet **ALL** of the following criteria?

- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a cardiologist
- The patient has New York Heart Association (NYHA) functional class II or III
- The patient has a peak left ventricular outflow tract (LVOT) gradient of at least 50 mmHg at rest or with provocation
- Myqorzo will NOT be used concurrently with another myosin inhibitor (e.g., Camzyos [mavacamten]) for the treatment of hypertrophic cardiomyopathy
- The patient had a trial of or contraindication to ONE of the following clinical standard of care agents: a beta-blocker (e.g., metoprolol, carvedilol), a non-dihydropyridine calcium channel blocker (e.g., verapamil, diltiazem)
- The patient had a trial of or contraindication to the preferred agent: Camzyos (mavacamten)

If yes, **approve for 6 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

AFICAMTEN

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AFICAMTEN (Myqorzo)** requires the following rule(s) be met for approval:
You have symptomatic obstructive hypertrophic cardiomyopathy (HCM: a type of heart condition)
You are 18 years of age or older
Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor)
You have New York Heart Association (NYHA) functional class II or III (a way to classify the severity of symptoms)
You have a peak left ventricular outflow tract (LVOT) gradient (evaluates the severity of disease) of at least 50 mmHg at rest or with provocation (a type of technique to evaluate how the heart performs under stress)
You will NOT use Myqorzo concurrently (at the same time) with another myosin inhibitor (such as Camzyos [mavacamten]) for the treatment of hypertrophic cardiomyopathy (a type of heart condition)
You have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medications: a beta-blocker (such as metoprolol, carvedilol), a non- dihydropyridine calcium channel blocker (such as verapamil, diltiazem)
You have tried or have a contraindication to (harmful for you to use) the preferred medication: Camzyos (mavacamten)

AFICAMTEN

RENEWAL CRITERIA

Does the patient have a diagnosis of symptomatic obstructive hypertrophic cardiomyopathy (HCM) (ICD-10 I42.1) and meet **ALL** of the following criteria?
- The patient has experienced continued clinical benefit (e.g., reduction of symptoms, NYHA classification improvement)
- Myqorzo will NOT be used concurrently with another myosin inhibitor (e.g., Camzyos [mavacamten]) for the treatment of hypertrophic cardiomyopathy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AFICAMTEN (Myqorzo)** requires the following rule(s) be met for renewal:
- You have symptomatic obstructive hypertrophic cardiomyopathy (HCM: a type of heart condition)
- You have experienced continued clinical benefit (such as reduction of symptoms, New York Heart Association [NYHA] classification [a way to classify severity of symptoms] improvement)
- You will NOT use Myqorzo concurrently (at the same time) with another myosin inhibitor (such as Camzyos [mavacamten]) for the treatment of hypertrophic cardiomyopathy (a type of heart condition)

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Myqorzo.

AFLIBERCEPT-AYYH	PAVBLU	49830		GPI-10 (8665501014)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of neovascular (wet) age-related macular degeneration (nAMD) (ICD-10 Group H35.32) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
- Pavblu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Susvimo [ranibizumab], Beovu [brolucizumab-dbll], Eylea [aflibercept])

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #0.1mL per 28 days for 3 fills.**

If no, continue to #2.

Does the patient have a diagnosis of macular edema following retinal vein occlusion (RVO) (ICD-10 H34.9; Groups H34.81, H34.83) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
- Pavblu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Vabysmo [faricimab-svoa], Eylea [aflibercept])
- The patient had a trial of or contraindication to ONE of the following preferred agents: Cimerli (ranibizumab-eqrn), Byooviz (ranibizumab-nuna)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #0.1mL per 28 days.**

If no, continue to #3.

Does the patient have a diagnosis of diabetic macular edema (DME) (ICD-10 E08.311, E08.321, E08.331, E08.341, E08.351, E08.37, E09.311, E09.321, E09.331, E09.341, E09.351, E09.37, E10.311, E10.321, E10.331, E10.341, E10.351, E10.37, E11.311, E11.321, E11.331, E11.341, E11.351, E11.37, E13.311, E13.321, E13.331, E13.341, E13.351, E13.37) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
- Pavblu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Vabysmo [faricimab-svoa], Eylea [aflibercept])

If yes, **approve for 5 months by HICL or GPI-10 with a quantity limit of #0.1mL per 28 days.**

If no, continue to #4.

AFLIBERCEPT-AYYH

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of diabetic retinopathy (DR) (ICD-10 Group E08.3 except E08.36, E08.37, and E08.39; Group E09.3 except E09.36, E09.37, and E09.39; Group E10.3 except E10.36, E10.37, and E10.39; Group E11.3 except E11.36, E11.37, and E11.39) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
Pavblu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Susvimo [ranibizumab], Eylea [aflibercept])
The patient had a trial of or contraindication to ONE of the following preferred agents: Cimerli (ranibizumab-eqrn), Byooviz (ranibizumab-nuna)

If yes, **approve for 5 months by HICL or GPI-10 with a quantity limit of #0.1mL per 28 days.**

If no, continue to #5.

Does the patient have a diagnosis of retinopathy of prematurity (ROP) (ICD-10 Group H35.1)?

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #0.3mL per 30 days.**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AFLIBERCEPT-AYYH (Pavblu)** requires the following rule(s) be met for approval:
You have ONE of the following:
Neovascular (wet) age-related macular degeneration (nAMD: a type of eye condition)
Macular edema following retinal vein occlusion (RVO: a type of eye condition)
Diabetic macular edema (DME: a type of eye condition caused by high blood sugar)
Diabetic retinopathy (DR: a type of eye condition caused by high blood sugar)
Retinopathy of prematurity (ROP: a type of eye condition in babies that are born early)
(Initial denial text continued on next page)

AFLIBERCEPT-AYYH

INITIAL CRITERIA (CONTINUED)

If you have neovascular (wet) age-related macular degeneration, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
- You will NOT use Pavblu concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Susvimo [ranibizumab], Beovu [brolucizumab-dbll], Eylea [aflibercept])

If you have macular edema following retinal vein occlusion, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
- You will NOT use Pavblu concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Vabysmo [faricimab-svoa], Eylea [aflibercept])
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Cimerli (ranibizumab-eqrn), Byooviz (ranibizumab-nuna)

If you have diabetic macular edema, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
- You will NOT use Pavblu concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Vabysmo [faricimab-svoa], Eylea [aflibercept])

If you have diabetic retinopathy, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
- You will NOT use Pavblu concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Susvimo [ranibizumab], Eylea [aflibercept])
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Cimerli (ranibizumab-eqrn), Byooviz (ranibizumab-nuna)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

AFLIBERCEPT-AYYH

RENEWAL CRITERIA

NOTE: For the diagnosis of retinopathy of prematurity (ROP), please refer to the Initial Criteria section.

Does the patient have a diagnosis of neovascular (wet) age-related macular degeneration (nAMD) (ICD-10 Group H35.32) and meet **ALL** of the following criteria?
The patient has maintenance or improvement of visual acuity
Pavblu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Susvimo [ranibizumab], Beovu [brolucizumab-dbll], Eylea [aflibercept])

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #0.1mL per 56 days.**

If no, continue to #2.

Does the patient have a diagnosis of macular edema following retinal vein occlusion (RVO) (ICD-10 H34.9; Groups H34.81, H34.83) and meet **ALL** of the following criteria?
The patient has maintenance or improvement of visual acuity
Pavblu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Vabysmo [faricimab-svoa], Eylea [aflibercept])

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #0.1mL per 56 days.**

If no, continue to #3.

Does the patient have a diagnosis of diabetic macular edema (DME) (ICD-10 E08.311, E08.321, E08.331, E08.341, E08.351, E08.37, E09.311, E09.321, E09.331, E09.341, E09.351, E09.37, E10.311, E10.321, E10.331, E10.341, E10.351, E10.37, E11.311, E11.321, E11.331, E11.341, E11.351, E11.37, E13.311, E13.321, E13.331, E13.341, E13.351, E13.37) and meet **ALL** of the following criteria?
The patient has maintenance or improvement of visual acuity
Pavblu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Vabysmo [faricimab-svoa], Eylea [aflibercept])

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #0.1mL per 56 days.**

If no, continue to #4.

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #0.1mL per 56 days.**

If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AFLIBERCEPT-EYLEA** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Macular edema following retinal vein occlusion (RVO: a type of eye condition)
- Diabetic retinopathy (DR: a type of eye condition caused by high blood sugar)
- Diabetic macular edema (DME: a type of eye condition caused by high blood sugar)
- Neovascular (wet) age-related macular degeneration (nAMD: a type of eye condition)

If you have macular edema following retinal vein occlusion, renewal also requires:
- You have maintenance or improvement of visual acuity (vision clarity or sharpness)
- You will NOT use Eylea concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Vabysmo [faricimab-svoa])

If you have diabetic retinopathy, renewal also requires:
- You have maintenance or improvement of visual acuity (vision clarity or sharpness)
- You will NOT use Eylea concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Susvimo [ranibizumab])

If you have diabetic macular edema, renewal also requires:
- You have maintenance or improvement of visual acuity (vision clarity or sharpness)
- You will NOT use Eylea concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Vabysmo [faricimab-svoa])

(Renewal denial text continued on next page)

AFLIBERCEPT-EYLEA

RENEWAL CRITERIA (CONTINUED)

If you have neovascular (wet) age-related macular degeneration, renewal also requires:

You have maintenance or improvement of visual acuity (vision clarity or sharpness)

You will NOT use Eylea concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Lucentis [ranibizumab], Susvimo [ranibizumab], Beovu [brolucizumab-dbll])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Eylea.

AFLIBERCEPT-EYLEA HD

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AFLIBERCEPT	EYLEA HD		54599	GPI-14 (86655010002080)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of diabetic retinopathy (DR) (ICD-10 Group E08.3 except E08.36, E08.37, and E08.39; Group E09.3 except E09.36, E09.37, and E09.39; Group E10.3 except E10.36, E10.37, and E10.39; Group E11.3 except E11.36, E11.37, and E11.39) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
Eylea HD will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Susvimo [ranibizumab])
The patient had a trial of or contraindication to ONE of the following preferred agents: Cimerli (ranibizumab-eqrn), Byooviz (ranibizumab-nuna)

If yes, **approve for 3 months by GPID or GPI-14 with a quantity limit of #0.14mL per 21 days for 3 fills.**

If no, continue to #2.

Does the patient have a diagnosis of diabetic macular edema (DME) (ICD-10 E08.311, E08.321, E08.331, E08.341, E08.351, E08.37, E09.311, E09.321, E09.331, E09.341, E09.351, E09.37, E10.311, E10.321, E10.331, E10.341, E10.351, E10.37, E11.311, E11.321, E11.331, E11.341, E11.351, E11.37, E13.311, E13.321, E13.331, E13.341, E13.351, E13.37) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
Eylea HD will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Vabysmo [faricimab-svoa])

If yes, **approve for 4 months by GPID or GPI-14 with a quantity limit of #0.14mL per 21 days for 3 fills.**

If no, continue to #3.

AFLIBERCEPT-EYLEA HD

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of neovascular (wet) age-related macular degeneration (nAMD) (ICD-10 Group H35.32) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
- Eylea HD will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Susvimo [ranibizumab], Beovu [brolucizumab-dbll])

If yes, **approve for 4 months by GPID or GPI-14 with a quantity limit of #0.14mL per 21 days for 3 fills.**

If no, continue to #4.

Does the patient have a diagnosis of macular edema following retinal vein occlusion (RVO) (ICD-10 H34.9; Groups H34.81, H34.83) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
- Eylea HD will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Lucentis [ranibizumab], Vabysmo [faricimab-svoa])
- The patient had a trial of or contraindication to ONE of the following preferred agents: Cimerli (ranibizumab-eqrn), Byooviz (ranibizumab-nuna)

If yes, **approve for 5 months by GPID or GPI-14 with a quantity limit of #0.14mL per 21 days for 3 fills.**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

AGALSIDASE BETA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AGALSIDASE BETA	FABRAZYME	24861		GPI-10 (3090361010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of Fabry disease (ICD-10 E75.21) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with a nephrologist, cardiologist, or specialist physician in genetics or inherited metabolic disorders
- Fabrazyme will NOT be used concurrently with another Fabry disease therapy (e.g., Elfabrio [pegunigalsidase alfa-iwxj], Galafold [migalastat])
- The patient is symptomatic OR has evidence of injury from GL-3 to the kidney, heart, or central nervous system recognized by laboratory, histological, or imaging findings (e.g., decreased GFR for age, persistent albuminuria, cerebral white matter lesions on brain MRI, cardiac fibrosis on contrast cardiac MRI)

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the request for a female **AND** the patient meets the following criterion?
- The patient has a galactosidase alpha (GLA) gene mutation via genetic testing

If yes, **approve for 6 months by HICL or GPI-10.**
If no, continue to #3.

Is the request for a male and the patient meets **ONE** of the following criteria?
- The patient has an alpha galactosidase A (a-Gal-A) deficiency as indicated by an enzyme assay
- The patient has a galactosidase alpha (GLA) gene mutation via genetic testing

If yes, **approve for 6 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

AGALSIDASE BETA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AGALSIDASE BETA (Fabrazyme)** requires the following rule(s) be met for approval:
You have Fabry disease (a rare genetic disease)
You are 2 years of age or older
Therapy is prescribed by or in consultation with a nephrologist (a type of kidney doctor), cardiologist (a type of heart doctor), or a doctor specializing in genetics or inherited metabolic disorders
You will NOT use Fabrazyme concurrently (at the same time) with another Fabry disease medication (such as Elfabrio [pegunigalsidase alfa-iwxj], Galafold [migalastat])
You are symptomatic OR have evidence of injury from GL-3 (globotriaosylceramide: a type of fat) to the kidney, heart, or central nervous system recognized by laboratory, histological (viewed by microscope), or imaging findings. Evidence of injury may include decreased glomerular filtration rate (GFR: a tool for evaluating kidney function) for age, persistent albuminuria (protein in urine), cerebral white matter lesions on brain MRI (magnetic resonance imaging: type of imaging lab), cardiac fibrosis (abnormal thickening of heart valves) on contrast cardiac MRI
If you are a female, approval also requires:
You have a galactosidase alpha (GLA) gene mutation (abnormal change in a type of gene) as shown by genetic testing
If you are a male, approval also requires ONE of the following:
You do NOT have enough alpha galactosidase A (a-Gal-A: a type of protein) as indicated by an enzyme assay (a type of lab test)
You have a galactosidase alpha (GLA) gene mutation (abnormal change in a type of gene) as shown by genetic testing

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

AGALSIDASE BETA

RENEWAL CRITERIA

Does the patient have a diagnosis of Fabry disease (ICD-10 E75.21) **AND** meet the following criterion?
Fabrazyme will NOT be used concurrently with another Fabry disease therapy (e.g., Elfabrio [pegunigalsidase alfa-iwxj], Galafold [migalastat])

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Has the patient demonstrated improvement, maintenance, or stabilization in **ONE** of the following while on therapy?
Symptoms (e.g., pain, hypohidrosis/anhidrosis, exercise intolerance, GI symptoms, angiokeratomas, abnormal cornea, tinnitus/hearing loss)
Imaging (e.g., brain/cardiac MRI, DEXA, renal ultrasound)
Laboratory or histological testing (e.g., GL-3 in plasma/urine, renal biopsy)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AGALSIDASE BETA (Fabrazyme)** requires the following rule(s) be met for renewal:
You have Fabry disease (a rare genetic disease)
You will NOT use Fabrazyme concurrently (at the same time) with another Fabry disease medication (such as Elfabrio [pegunigalsidase alfa-iwxj], Galafold [migalastat])
You have demonstrated improvement, maintenance, or stabilization in ONE of the following while on therapy:
Symptoms (such as pain, hypohidrosis [less sweating]/anhidrosis [no sweating], exercise intolerance, GI [gastrointestinal] symptoms, angiokeratomas [dark red-blue raised spots on the skin], abnormal cornea [a part of the eye], tinnitus [ringing in the ears]/hearing loss)
Imaging (such as brain/cardiac MRI [magnetic resonance imaging: type of imaging lab], DEXA [a type of bone scan], renal [kidney] ultrasound)
Laboratory or histological (viewed by microscope) testing (such as GL-3 [globotriaosylceramide: a type of fat] in plasma/urine, renal biopsy [removal of cells or tissue from the body for examination])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ALECTINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ALECTINIB HCL	ALECENSA	42895		GPI-10 (2153050710)	

GUIDELINES FOR USE

Does the patient have a diagnosis of non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's cancer is anaplastic lymphoma kinase (ALK)-positive, as detected by an FDA-approved test

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the patient's cancer node positive or the tumor is at least 4 cm **AND** the patient meets the following criterion?
Alecensa will be used as adjuvant treatment following tumor resection

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #8 per day.**
If no, continue to #3.

Is the patient's cancer metastatic?

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #8 per day.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ALECTINIB (Alecensa)** requires the following rules be met for approval:
You have non-small cell lung cancer (NSCLC: a type of lung cancer)
You are 18 years of age or older
Your cancer is anaplastic lymphoma kinase (ALK)-positive (a type of abnormal gene change), as detected by a Food and Drug Administration (FDA)-approved test
You meet ONE of the following:
- Your cancer is node positive (cancer has spread to the lymph nodes) or your tumor is at least 4 cm, and Alecensa will be used as adjuvant (additional) treatment following tumor resection (surgical removal of a tumor)
- Your cancer is metastatic (has spread to other parts of the body)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ALLERGEN EXTRACT-HOUSE DUST MITE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
MITE,D.FARINAE-D.PTERONYSSINUS	ODACTRA		42527	GPI-14 (20109902220740)	ROUTE = SUBLINGUAL

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of house dust mite (HDM)-induced allergic rhinitis (ICD-10 J30.89) and meet **ALL** of the following criteria?

- The patient is 5 to 65 years of age
- The patient's diagnosis is confirmed by in vitro testing for IgE antibodies to *Dermatophagoides farinae* or *Dermatophagoides pteronyssinus* house dust mites, OR by skin testing to licensed house dust mite allergen extracts
- Therapy is prescribed by or in consultation with an allergist, immunologist, or other physician experienced in the diagnosis and treatment of allergic diseases
- The patient has persistent symptoms of allergic rhinitis (defined as symptoms presenting for at least 4 days a week or for at least 4 weeks)
- The patient has moderate to severe symptoms of allergic rhinitis (including one or more of the following: troublesome symptoms, sleep disturbance, impairment of daily activities, or impairment of school or work)
- The patient has a current claim or prescription for an auto-injectable epinephrine within the past 365 days

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #1 per day.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
GR POL-ORC/SW VER/RYE/KENT/TIM	ORALAIR	39918		GPI-10 (2010990520)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of grass pollen-induced allergic rhinitis (ICD-10 J30.1) and meet **ALL** of the following criteria?

- The diagnosis is confirmed by a positive skin test or in vitro testing for pollen-specific IgE antibodies for any of the five grass species (sweet vernal, orchard, perennial rye, timothy, and Kentucky blue grass mixed pollens) contained in Oralair
- Therapy is prescribed by or in consultation with an allergist, immunologist, or other physician experienced in the diagnosis and treatment of allergic diseases
- The patient has persistent symptoms of allergic rhinitis (defined as symptoms presenting for at least 4 days a week or for at least 4 weeks)
- The patient has moderate to severe symptoms of allergic rhinitis (including one or more of the following: troublesome symptoms, sleep disturbance, impairment of daily activities, or impairment of school or work)
- The patient has a current claim or prescription for auto-injectable epinephrine

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient 5 to 17 years of age?

If yes, **approve for 12 months by GPID or GPI-14 for all of the following:**
100 IR: Approve #3 for 1 fill.
300 IR: Approve #1 per day.

If no, continue to #3.

Is the patient between 18 and 65 years of age?

If yes, **approve the 300 IR strength for 12 months by GPID or GPI-10 with a quantity limit of #1 per day.**

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ALPHA-1-PROTEINASE INHIBITOR	GLASSIA, PROLASTIN C, ARALAST NP, ZEMAIRA	04529		GPI-10 (4510001010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of clinically evident emphysema (ICD-10 Group J43) due to severe hereditary deficiency of Alpha1-PI (alpha1-antitrypsin [AAT] deficiency) (ICD-10 E88.01) and meet **ALL** of the following criteria?

The patient is 18 years of age or older

The requested medication will be used as chronic augmentation or maintenance therapy

Therapy is prescribed by or in consultation with a pulmonologist, allergist, or immunologist

The patient's alpha-1 antitrypsin deficiency genotype does NOT include a normal M gene (e.g., MZ)

The patient has an FEV1 of less than or equal to 65%

The patient is not currently smoking

The patient has a documented pre-treatment alpha1-antitrypsin (AAT) level of less than or equal to 57mg/dL or 11micromol/L

The patient does not have an IgA deficiency

The requested medication will NOT be used concurrently with another alpha-1-proteinase inhibitor (e.g., Glassia, Prolastin C, Aralast NP, Zemaira)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ALPHA-1-PROTEINASE INHIBITOR

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ALPHA-1-PROTEINASE INHIBITOR (Glassia, Prolastin C, Aralast NP, Zemaira)** requires the following rule(s) be met for approval:

- You have clinically evident emphysema (a type of lung disease) due to severe hereditary deficiency of Alpha1-PI (alpha1-antitrypsin [AAT] deficiency) (a type of genetic condition)
- You are 18 years of age or older
- The requested medication will be used as chronic augmentation therapy (long-term replacement treatment) or maintenance therapy (taken on a regular basis)
- Therapy is prescribed by or in consultation with a pulmonologist (lung/breathing doctor), allergist (a type of allergy doctor), or immunologist (a type of immune system doctor)
- Your alpha-1 antitrypsin deficiency genotype (a set of genes) does NOT include a normal M gene (such as MZ [a type of gene])
- You have a forced expiratory volume (FEV1: amount of air exhaled in one second) of less than or equal to 65 percent
- You are not currently smoking
- You have a documented pre-treatment alpha1-antitrypsin (AAT: a type of protein) level of less than or equal to 57mg/dL or 11micromol/L
- You do not have an IgA deficiency (a type of condition where the immune system does not make enough of a type of antibody)
- You will NOT use the requested medication concurrently (at the same time) with another alpha-1-proteinase inhibitor (such as Glassia, Prolastin C, Aralast NP, Zemaira)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ALPHA-1-PROTEINASE INHIBITOR

RENEWAL CRITERIA

Does the patient have a diagnosis of clinically evident emphysema (ICD-10 Group J43) due to severe hereditary deficiency of Alpha1-PI (alpha1-antitrypsin [AAT] deficiency) (ICD-10 E88.01) and meet **ALL** of the following criteria?
The patient has shown clinical benefit (maintained or slowed progression of emphysema)
The patient is not currently smoking
The requested medication will NOT be used concurrently with another alpha-1-proteinase inhibitor (e.g., Glassia, Prolastin C, Aralast NP, Zemaira)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ALPHA-1-PROTEINASE INHIBITOR (Glassia, Prolastin C, Aralast NP, Zemaira)** requires the following rule(s) be met for renewal:
You have clinically evident emphysema (a type of lung disease) due to severe hereditary deficiency of Alpha1-PI (alpha1-antitrypsin [AAT] deficiency) (a type of genetic condition)
You have shown clinical benefit (improvement) (maintained or slowed progression of emphysema [a type of lung disease])
You are not currently smoking
You will NOT use the requested medication concurrently (at the same time) with another alpha-1-proteinase inhibitor (such as Glassia, Prolastin C, Aralast NP, Zemaira)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Aralast NP, Glassia, Prolastin C, and Zemaira.

GUIDELINES FOR USE

GOCOVRI

Does the patient have a diagnosis of Parkinson's disease (ICD-10 Group G20)?

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient have dyskinesia and meet **ALL** of the following criteria?
The patient is receiving levodopa-based therapy
The patient had a trial of generic amantadine capsules, tablets, or solution

If yes, **approve for 12 months by GPID or GPI-14 for all strengths with the following quantity limits:**
68.5mg: #1 per day.
137mg: #2 per day.

If no, continue to #3.

Is the patient experiencing 'off' episodes and meets **ALL** of the following criteria?
Gocovri will be used as an adjunctive treatment to levodopa/carbidopa therapy
The patient had a trial of generic amantadine capsules, tablets, or solution

If yes, **approve for 12 months by GPID or GPI-14 for all strengths with the following quantity limits:**
68.5mg: #1 per day.
137mg: #2 per day.

If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

AMANTADINE EXTENDED RELEASE

GUIDELINES FOR USE - GOCOVRI (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AMANTADINE EXTENDED RELEASE (Gocovri)** requires the following rule(s) be met for approval:
You have Parkinson's disease (type of movement disorder)
If you have dyskinesia (uncontrolled involuntary muscle movements), approval also requires:
You are receiving levodopa-based therapy
You have tried generic amantadine capsules, tablets, or solution
If you are experiencing 'off' episodes (period of symptoms in between doses), approval also requires:
Gocovri will be used as adjunctive (add-on) treatment to levodopa-carbidopa therapy
You have tried generic amantadine capsules, tablets, or solution

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

AMANTADINE EXTENDED RELEASE

GUIDELINES FOR USE (CONTINUED)

OSMOLEX ER

Does the patient have a diagnosis of Parkinson's disease (ICD-10 Group G20) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with a psychiatrist, neurologist, or geriatrician
The patient had a trial of generic amantadine IR capsules, tablets, or solution

If yes, **approve for 12 months by GPID or GPI-14 for all strengths with a quantity limit of #1 per day.**
If no, continue to #2.

Is the request for the treatment of drug-induced extrapyramidal symptoms (EPS) and the patient meets **ALL** of the following criteria?
The patient is 18 years of age or older
Therapy is prescribed by or in consultation with a psychiatrist, neurologist, or geriatrician
The patient had a trial of generic amantadine IR capsules, tablets, or solution

If yes, **approve for 12 months by GPID or GPI-14 for all strengths with a quantity limit of #1 per day.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AMANTADINE EXTENDED RELEASE (Osmolex ER)** requires the following rule(s) be met for approval:
You have one of the following:
- Parkinson's disease (type of movement disorder)
- Drug-induced extrapyramidal symptoms (group of movement disorders)

If you have Parkinson's disease, approval also requires:
- Therapy is prescribed by or in consultation with a psychiatrist (mental disorder doctor), neurologist (nerve doctor), or geriatrician (doctor who specializes in treating older adults)
- You have tried generic amantadine immediate-release capsules, tablets or solution

If you have drug-induced extrapyramidal symptoms, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a psychiatrist (mental disorder doctor), neurologist (nerve doctor), or geriatrician (doctor who specializes in treating older adults)
- You have tried generic amantadine immediate-release capsules, tablets or solution

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

AMBRISENTAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AMBRISENTAN	LETAIRIS, AMBRISENTAN	34849		GPI-10 (4016000700)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of pulmonary arterial hypertension (PAH) (WHO Group 1) (ICD- 10 I27.0, Group I27.2) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with a cardiologist or pulmonologist
The patient does NOT have idiopathic pulmonary fibrosis (IPF)

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's PAH diagnosis confirmed by right heart catheterization with **ALL** of the following parameters?
Mean pulmonary artery pressure (PAP) of greater than 20 mmHg
Pulmonary capillary wedge pressure (PCWP) of less than or equal to 15 mmHg
Pulmonary vascular resistance (PVR) of greater than 2 Wood units (WU)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AMBRISENTAN (Letairis)** requires the following rule(s) be met for approval:
You have pulmonary arterial hypertension (PAH: a type of heart and lung condition) (World Health Organization [WHO] Group 1)
Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor) or pulmonologist (lung/breathing doctor)
You do NOT have idiopathic pulmonary fibrosis (scarring of the lungs due to an unknown cause)
(Initial denial text continued on next page)

AMIVANTAMAB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AMIVANTAMAB (Rybrevant, Rybrevant Faspro)** requires the following rule(s) be met for approval:

You have locally advanced or metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread to nearby tissue, lymph nodes, or other parts of the body)

You are 18 years of age or older

If you have epidermal growth factor receptor (EGFR: type of protein) exon 19 deletions or exon 21 L858R substitution mutations (abnormal changes in a type of gene), approval also requires ONE of the following:

Your mutation is detected by a Food and Drug Administration (FDA)-approved test AND the requested medication will be used in combination with lazertinib (Lazcluze)

The requested medication will be used in combination with carboplatin and pemetrexed AND your disease has progressed while on or after epidermal growth factor receptor (EGFR) tyrosine kinase-inhibitor therapy (such as Tagrisso [osimertinib], Tarceva [erlotinib], Iressa [gefitinib], Gilotrif [afatinib])

If you have epidermal growth factor receptor (EGFR: type of protein) exon 20 insertion mutations (abnormal changes in a type of gene), as detected by a Food and Drug Administration (FDA)-approved test, approval also requires you meet ONE of the following:

The requested medication will be used in combination with carboplatin and pemetrexed

The requested medication will be used as a single agent AND your disease has progressed on or after platinum-based chemotherapy (such as cisplatin, carboplatin)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

AMLODIPINE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AMLODIPINE (Norliqva)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Hypertension (high blood pressure)
- Chronic stable angina (a type of heart condition)
- Confirmed or suspected vasospastic angina (Prinzmetal's or variant angina) (a type of heart condition)
- Angiographically documented coronary artery disease (a type of heart condition that has been confirmed by a type of imaging test)

If you have hypertension, approval also requires:
- You have a contraindication to (harmful for you to use) or are unable to swallow amlodipine tablets

If you have chronic stable angina, approval also requires:
- You have a contraindication to (harmful for you to use) or are unable to swallow amlodipine tablets

If you have confirmed or suspected vasospastic angina (Prinzmetal's or variant angina), approval also requires:
- You have a contraindication to (harmful for you to use) or are unable to swallow amlodipine tablets

If you have angiographically documented coronary artery disease (CAD), approval also requires:
- You do not have heart failure (a type of heart condition) OR an ejection fraction (evaluates heart function) of less than 40 percent
- You have a contraindication to (harmful for you to use) or are unable to swallow amlodipine tablets

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

ANADROL-50

Does the patient have a diagnosis of anemia caused by acquired aplastic anemia, congenital aplastic anemia, myelofibrosis, hypoplastic anemias, or Fanconi's anemia (ICD-10 Group D61) **AND** meet the following criterion?
The patient will be monitored for peliosis hepatis, liver cell tumors and blood lipid changes

If yes, continue to #2.
If no, continue to #3.

Does the patient have **ANY** of the following contraindications to anabolic steroid therapy?
Known or suspected carcinoma of the prostate or breast in male patients
Known or suspected carcinoma of the breast in females with hypercalcemia
Known or suspected nephrosis (the nephrotic phase of nephritis)
Known or suspected hypercalcemia
Severe hepatic dysfunction

If yes, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

If no, **approve for 6 months by HICL or GPI-10.**

CONTINUED ON NEXT PAGE

INITIAL CRITERIA - ANADROL-50 (CONTINUED)

Does the patient have a diagnosis of cachexia associated with AIDS (ICD-10 R64) and meet **ALL** of the following criteria?
- The patient is on anti-retroviral therapy
- The patient has a viral load of less than 200 copies per mL within the past 3 months
- Therapy is prescribed by or in consultation with a gastroenterologist, nutritional support specialist (SBS) or infectious disease specialist
- The patient will be monitored for peliosis hepatis, liver cell tumors and blood lipid changes

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient has 10% unintentional weight loss over 12 months
- The patient has 7.5% unintentional weight loss over 6 months
- The patient has 5% body cell mass (BCM) loss within 6 months
- The patient has a body cell mass (BCM) of less than 35% (men) and a body mass index (BMI) of less than 27 kg per meter squared
- The patient has a body cell mass (BCM) of less than 23% (women) of total body weight and a body mass index (BMI) of less than 27 kg per meter squared
- The patient has a BMI of less than 18.5 kg per meter squared

If yes, continue to #5.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have **ANY** of the following contraindications to anabolic steroid therapy?
- Known or suspected carcinoma of the prostate or breast in male patients
- Known or suspected carcinoma of the breast in females with hypercalcemia
- Known or suspected nephrosis (the nephrotic phase of nephritis)
- Known or suspected hypercalcemia
- Severe hepatic dysfunction

If yes, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

If no, **approve for 12 weeks by HICL or GPI-10.**

ANABOLIC STEROIDS

INITIAL CRITERIA - ANADROL-50 (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ANABOLIC STEROIDS (Anadrol-50)** requires the following rule(s) be met for approval:

You have ONE of the following:
- Anemia (lack of healthy red blood cells) caused by acquired aplastic anemia, congenital aplastic anemia, myelofibrosis, hypoplastic anemias, or Fanconi's anemia
- Cachexia (severe weight and muscle loss) associated with AIDS (acquired immune deficiency syndrome: a type of immune system disorder caused by a virus infection)

You will be monitored for peliosis hepatis (blood-filled spaces in the liver), liver cell tumors and blood lipid (fats) changes

You do not have ANY of the following contraindications to (harmful for you to use) anabolic steroid therapy:
- Known or suspected prostate or breast cancer in male patients
- Known or suspected breast cancer in females with hypercalcemia (high calcium levels)
- Known or suspected nephrosis (type of kidney disorder)
- Known or suspected hypercalcemia (high calcium levels)
- Severe hepatic (liver) dysfunction

If you have cachexia associated with AIDS, approval also requires:
- You are on anti-retroviral therapy (therapy that treats a type of viral infection)
- You have a viral load (amount of virus in your blood) of less than 200 copies per mL within the past 3 months
- Therapy is prescribed by or in consultation with a gastroenterologist (doctor who treats digestive conditions), nutritional support specialist (SBS), or infectious disease specialist
- You meet ONE of the following:
  - You have 10% unintentional weight loss over 12 months
  - You have 7.5% unintentional weight loss over 6 months
  - You have 5% body cell mass (BCM) loss within 6 months
  - You have a BCM of less than 35% (men) and a body mass index (BMI) of less than 27 kg per meter squared
  - You have a BCM of less than 23% (women) of total body weight and a body mass index (BMI) of less than 27 kg per meter squared
  - You have a BMI of less than 18.5 kg per meter squared

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ANABOLIC STEROIDS

INITIAL CRITERIA (CONTINUED)

OXANDRIN

Is the request for adjunctive therapy to promote weight gain and the patient meets **ALL** of the following criteria?
The patient's weight loss is caused by extensive surgery, chronic infections, or severe trauma
The patient will be monitored for peliosis hepatis, liver cell tumors and blood lipid changes

If yes, continue to #2.
If no, continue to #3.

Does the patient have **ANY** of the following contraindications to anabolic steroid therapy?
Known or suspected carcinoma of the prostate or breast in male patients
Known or suspected carcinoma of the breast in females with hypercalcemia
Known or suspected nephrosis (the nephrotic phase of nephritis)
Known or suspected hypercalcemia
Severe hepatic dysfunction

If yes, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

If no, **approve for 12 weeks by HICL or GPI-10.**

Is the request for adjunctive therapy to offset the protein catabolism associated with prolonged administration of corticosteroids?

If yes, continue to #6.
If no, continue to #4.

Is the request for the relief of thebone pain accompanying osteoporosis (ICD-10 Groups M80, M81)?

If yes, continue to #6.
If no, continue to #5.

Does the patient have a diagnosis of Turner's syndrome (ICD-10 Group Q96)?

If yes, continue to #6.
If no, continue to #8.

ANABOLIC STEROIDS

INITIAL CRITERIA - OXANDRIN (CONTINUED)

Will the patient be monitored for peliosis hepatis, liver cell tumors and blood lipid changes?

If yes, continue to #7.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have **ANY** of the following contraindications to anabolic steroid therapy?
Known or suspected carcinoma of the prostate or breast in male patients
Known or suspected carcinoma of the breast in females with hypercalcemia
Known or suspected nephrosis (the nephrotic phase of nephritis)
Known or suspected hypercalcemia
Severe hepatic dysfunction

If yes, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

If no, **approve for 6 months by HICL or GPI-10.**

Does the patient have a diagnosis of cachexia associated with AIDS (ICD-10 R64) and meet **ALL** of the following criteria?
The patient is on anti-retroviral therapy
The patient has a viral load of less than 200 copies per mL within the past 3 months
Therapy is prescribed by or in consultation with a gastroenterologist, nutritional support specialist (SBS) or infectious disease specialist
The patient will be monitored for peliosis hepatis, liver cell tumors and blood lipid changes

If yes, continue to #9.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ANABOLIC STEROIDS

INITIAL CRITERIA - OXANDRIN (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient has 10% unintentional weight loss over 12 months,
- The patient has 7.5% unintentional weight loss over 6 months
- The patient has 5% body cell mass (BCM) loss within 6 months
- The patient has a body cell mass (BCM) of less than 35% (men) and a body mass index (BMI) of less than 27 kg per meter squared
- The patient has a body cell mass (BCM) of less than 23% (women) of total body weight and a body mass index (BMI) of less than 27 kg per meter squared
- The patient has a BMI of less than 18.5 kg per meter squared

If yes, continue to #10.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have **ANY** of the following contraindications to anabolic steroid therapy?
- Known or suspected carcinoma of the prostate or breast in male patients
- Known or suspected carcinoma of the breast in females with hypercalcemia
- Known or suspected nephrosis (the nephrotic phase of nephritis)
- Known or suspected hypercalcemia
- Severe hepatic dysfunction

If yes, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

If no, **approve for 12 weeks by HICL or GPI-10.**

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ANABOLIC STEROIDS (Oxandrin, oxandrolone)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Weight loss
- Protein catabolism (breakdown) caused by long-term use of corticosteroids
- Bone pain accompanying osteoporosis (type of bone condition)
- Turner's syndrome (type of genetic disorder)
- Cachexia (severe weight and muscle loss) associated with AIDS (acquired immune deficiency syndrome: a type of immune system disorder caused by a virus infection)

ANABOLIC STEROIDS

INITIAL CRITERIA - OXANDRIN (CONTINUED)

You will be monitored for peliosis hepatis (blood-filled spaces in the liver), liver cell tumors and blood lipid (fats) changes
You do not have ANY of the following contraindications to (harmful for you to use) anabolic steroid therapy:
- Known or suspected prostate or breast cancer in male patients
- Known or suspected breast cancer in females with hypercalcemia (high calcium levels)
- Known or suspected nephrosis (type of kidney disorder)
- Known or suspected hypercalcemia (high calcium levels)
- Severe hepatic (liver) dysfunction

If you have weight loss, approval also requires:
- Your weight loss is caused by extensive surgery, chronic infections, or severe trauma
- The medication is being used as add-on therapy to help weight gain

If you have cachexia associated with AIDS, approval also requires:
- You are on anti-retroviral therapy (treatment for a type of viral infection)
- You have a viral load (amount of virus in the blood) of less than 200 copies per mL within the past 3 months
- Therapy is prescribed by or in consultation with a gastroenterologist (doctor who treats digestive conditions), nutritional support specialist (SBS) or infectious disease specialist
- You meet ONE of the following:
  - You have 10% unintentional weight loss over 12 months
  - You have 7.5% unintentional weight loss over 6 months
  - You have 5% body cell mass (BCM) loss within 6 months
  - You have a BCM of less than 35% (men) and a body mass index (BMI) of less than 27 kg per meter squared
  - You have a BCM of less than 23% (women) of total body weight and a body mass index (BMI) of less than 27 kg per meter squared
  - You have a BMI of less than 18.5 kg per meter squared

ANABOLIC STEROIDS

RENEWAL CRITERIA

NOTE: For the diagnoses of anemia, weight loss, protein catabolism associated with prolonged administration of corticosteroids, bone pain accompanying osteoporosis, or Turner's syndrome, please refer to the Initial Criteria section.

OXANDRIN and ANADROL-50

Does the patient have a diagnosis of cachexia associated with AIDS (ICD-10 R64) and the patient meet **ALL** of the following criteria?
- The patient is on anti-retroviral therapy
- The patient's viral load is less than 200 copies per mL within the past 3 months
- The patient has responded to therapy as measured by at least a 10% increase in weight from baseline (current weight must have been measured within the last 4 weeks)
- The patient has not received more than 24 weeks of therapy in a calendar year

If yes, **approve for 12 weeks by HICL or GPI-10.** (**Note**: therapy is limited to 24 weeks per calendar year.)

If no, do not approve.

RENEWAL DENIAL TEXT: ***Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.**

Our guideline named **ANABOLIC STEROIDS (Oxandrin, oxandrolone, Anadrol-50)** requires the following rule(s) be met for renewal:
- You have cachexia (severe weight and muscle loss) associated with AIDS (acquired immune deficiency syndrome: a type of immune system disorder caused by a virus infection)
- You are on anti-retroviral therapy (treatment for a type of viral infection)
- Your viral load (amount of virus in the blood) is less than 200 copies per mL within the past 3 months
- You have had a 10% increase in weight from baseline (before treatment) (current weight must have been measured within the last 4 weeks)
- You have not received more than 24 weeks of therapy in a calendar year

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ANAKINRA	KINERET	22953		GPI-10 (6626001000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Is the request for the treatment of coronavirus disease 2019 (COVID-19) in a hospitalized adult?

If yes, **do not approve**. [NOTE: This indication is for hospital use only.]
DENIAL TEXT: See initial denial text at the end of the guideline.

If no, continue to #2.

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
Therapy is prescribed by or in consultation with a rheumatologist
Kineret will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine

If yes, continue to #3.
If no, continue to #4.

ANAKINRA

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #0.67 mL per day.**
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of cryopyrin-associated periodic syndromes (CAPS), including neonatal-onset multisystem inflammatory disease (NOMID) (ICD-10 M04.2) and meet **ALL** of the following criteria?
- The patient has genetic testing for gain-of-function mutations in the *NLRP3* gene OR has inflammatory markers (i.e., elevated CRP, ESR, serum amyloid A protein [SAA] or S100 proteins)
- The patient has TWO of the following: urticarial-like rash (neutrophilic dermatitis), cold-triggered episodes, sensorineural hearing loss, musculoskeletal symptoms, chronic aseptic meningitis, skeletal abnormalities
- Kineret will NOT be used concurrently with another systemic biologic (e.g., Arcalyst [rilonacept]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of CAPS, including NOMID

  If yes, **approve for lifetime by HICL or GPI-10.**
  If no, continue to #5.

CONTINUED ON NEXT PAGE

Copyright © 2026 MedImpact Healthcare Systems, Inc. All rights reserved. This document is proprietary to MedImpact. MedImpact maintains the sole and exclusive ownership, right, title, and interest in and to this document.

ANAKINRA

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of deficiency of interleukin-1 receptor antagonist (DIRA) (ICD-10 M04.8) and meet **ALL** of the following criteria?
- The patient has genetic testing for gain-of-function mutations in the *IL1RN* gene OR has inflammatory markers (i.e., elevated CRP, ESR)
- The patient has ONE of the following: pustular psoriasis-like rashes, osteomyelitis, absence of bacterial osteomyelitis, nail changes (i.e., onychomadesis)
- Kineret will NOT be used concurrently with another systemic biologic (e.g., Arcalyst [rilonacept]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of DIRA

If yes, **approve for lifetime by HICL or GPI-10.**
If no, continue to #6.

Does the patient have a diagnosis of Active Still's Disease/Adult-Onset Still's Disease (AOSD) (ICD- 10 M06.1) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with a rheumatologist, dermatologist, or immunologist
- Kineret will NOT be used concurrently with another systemic biologic (e.g., Ilaris [canakinumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of Active Still's Disease/AOSD

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1.34 mL per day.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

CONTINUED ON NEXT PAGE

ANAKINRA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ANAKINRA (Kineret)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Cryopyrin-associated periodic syndromes (CAPS: a type of immune disorder) including neonatal-onset multisystem inflammatory disease (NOMID: a type of immune system disorder)
- Deficiency of interleukin-1 receptor antagonist (DIRA: a type of immune system disorder)
- Active Still's Disease/Adult-Onset Still's Disease (AOSD) (an autoinflammatory disease)

If you have moderate to severe rheumatoid arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Kineret concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- You meet ONE of the following:
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Adalimumab-ryvk/adalimumab-aaty
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor (TNF) blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - You have tried a TNF inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated you cannot use a JAK inhibitor (such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

(Initial denial text continued on next page)

ANAKINRA

INITIAL CRITERIA (CONTINUED)

If you have cryopyrin-associated periodic syndromes, including neonatal-onset multisystem inflammatory disease, approval also requires:
- You had genetic testing for gain-of-function mutations (abnormal change in gene) in the *NLRP3* gene (a type of gene) OR you have inflammatory markers (elevated C-reactive protein [CRP: a measure of how much inflammation is in the body], erythrocyte sedimentation rate [ESR: a measure of how much inflammation is in the body], serum amyloid A protein [SAA: a type of protein] or S100 proteins [a type of protein])
- You have TWO of the following: urticarial-like rash (neutrophilic dermatitis: a type of skin condition), cold-triggered episodes, sensorineural hearing loss (SNHL: a type of hearing loss), musculoskeletal symptoms (symptoms related to the skin and bones), chronic aseptic meningitis (inflammation of the brain and spinal cord), skeletal (bone) abnormalities
- You will NOT use Kineret concurrently (at the same time) with another systemic biologic (such as Arcalyst [rilonacept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Cryopyrin-Associated Periodic Syndromes, including Neonatal-Onset Multisystem Inflammatory Disease (types of immune system disorder)

If you have deficiency of interleukin-1 receptor antagonist, approval also requires:
- You had genetic testing for gain-of-function mutations (abnormal change in gene) in the *IL1RN gene* (a type of gene) OR you have inflammatory markers (elevated C-reactive protein [CRP: a measure of how much inflammation is in the body], erythrocyte sedimentation rate [ESR: a measure of how much inflammation is in the body])
- You have ONE of the following: pustular psoriasis-like rashes (a type of skin condition), osteomyelitis (bone infection), absence of bacterial osteomyelitis, nail changes (onychomadesis: nail shedding)
- You will NOT use Kineret concurrently (at the same time) with another systemic biologic (such as Arcalyst [rilonacept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Deficiency of Interleukin-1 Receptor Antagonist (a type of immune system disorder)

(Initial denial text continued on next page)

ANAKINRA

INITIAL CRITERIA (CONTINUED)

If you have Active Still's Disease/Adult-Onset Still's Disease, approval also requires:

Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor), dermatologist (a type of skin doctor), or immunologist (a type of immune system doctor)

You will NOT use Kineret concurrently (at the same time) with another systemic biologic (such as Ilaris [canakinumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Active Still's Disease/Adult-Onset Still's Disease (an autoinflammatory disease)

E. NOTE: Kineret will not be approved for the treatment of coronavirus disease 2019 (COVID-19) in hospitalized adults

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

ANAKINRA

RENEWAL CRITERIA

NOTE: For the diagnoses of cryopyrin-associated periodic syndromes (CAPS), including neonatal-onset multisystem inflammatory disease (NOMID), and deficiency of interleukin-1 receptor antagonist (DIRA), please refer to the Initial Criteria section.

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Kineret will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

If yes, continue to #2.
If no, continue to #3.

Does the patient meet **ONE** of the following criteria?
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #0.67 mL per day.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

ANAKINRA

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of Active Still's Disease/Adult-Onset Still's Disease (AOSD) (ICD- 10 M06.1) and meet **ALL** of following criteria?

Kineret will NOT be used concurrently with another systemic biologic (e.g., Ilaris [canakinumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of Active Still's Disease/AOSD

The patient has maintained or improved systemic inflammatory disease (e.g., fevers, pain, rash, arthritis) or the patient has achieved a reduction in corticosteroid (e.g., prednisone) dose

The patient's disease is still clinically active (remission has not been attained) OR discontinuing therapy will result in harm to the patient

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1.34 mL per day.** If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ANAKINRA (Kineret)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Active Still's Disease/Adult-Onset Still's Disease (AOSD) (an autoinflammatory disease)

If you have moderate to severe rheumatoid arthritis, renewal also requires:
You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
You will NOT use Kineret concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
You meet ONE of the following:
- You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor (TNF) blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

(Renewal denial text continued on next page)

ANAKINRA

RENEWAL CRITERIA (CONTINUED)

You have tried a TNF inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated you cannot use a JAK inhibitor (such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

If you have Active Still's Disease/Adult-Onset Still's Disease, renewal also requires:

- You will NOT use Kineret concurrently (at the same time) with another systemic biologic (such as Ilaris [canakinumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Active Still's Disease/Adult-Onset Still's Disease (an autoinflammatory disease)
- You have maintained or improved systemic inflammatory disease (such as fevers, pain, rash, arthritis [a type of joint condition]) or you have achieved a reduction (decrease) in corticosteroid (such as prednisone) dose
- Your disease is still clinically active (remission [reduction or disappearance of the signs and symptoms of a disease] has not been attained) OR discontinuing therapy will be harmful for you

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

RATIONALE

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe systemic lupus erythematosus (SLE) (ICD-10 Group M32) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- The patient is receiving standard SLE therapy (e.g., oral corticosteroids, antimalarials, or immunosuppressants)
- Saphnelo will NOT be used concurrently with another systemic biologic (e.g., Benlysta [belimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of SLE

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ANIFROLUMAB-FNIA (Saphnelo)** requires the following rule(s) be met for approval:
- You have moderate to severe systemic lupus erythematosus (SLE: a type of immune condition)
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You are receiving standard SLE therapy (such as oral corticosteroids, antimalarials, or immunosuppressants)
- You will NOT use Saphnelo concurrently (at the same time) with another systemic biologic (such as Benlysta [belimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of systemic lupus erythematosus

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

APALUTAMIDE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
APALUTAMIDE	ERLEADA	44773		GPI-10 (2140241000)	

GUIDELINES FOR USE

Does the patient have **ONE** of the following diagnoses?
Metastatic castration-sensitive prostate cancer (mCSPC) (ICD-10 Z19.1, C61)
Non-metastatic castration-resistant prostate cancer (nmCRPC) (ICD-10 Z19.2, C61)

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
The patient has received a bilateral orchiectomy
The patient has a castrate level of testosterone (i.e., less than 50 ng/dL)
Erleada will be used concurrently with a gonadotropin releasing hormone (GnRH) analog (e.g., Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

If yes, **approve for 12 months by GPID or GPI-14 with the following quantity limits:**
60 mg: #4 per day.
240 mg: #1 per day.

If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **APALUTAMIDE (Erleada)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Metastatic castration-sensitive prostate cancer (mCSPC: prostate cancer that has spread to other parts of the body and responds to hormone therapy)
- Non-metastatic castration-resistant prostate cancer (nmCRPC: prostate cancer that has not spread to other parts of the body and does not respond to hormone therapy)

You meet ONE of the following:
- You have received a bilateral orchiectomy (both testicles have been surgically removed)
- You have a castrate level of testosterone (blood testosterone levels are less than 50 ng/dL)
- Erleada will be used together with a gonadotropin releasing hormone analog (such as Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

APOMORPHINE HCL	APOKYN, APOMORPHINE HCL		42078	GPI-14 (7320301010E220)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of advanced Parkinson's disease (PD) (ICD-10 Group G20) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with a neurologist
- The requested medication will be used for the acute, intermittent treatment of hypomobility, 'OFF' episodes associated with advanced Parkinson's disease
- The patient is experiencing at least 3 hours of “off” time on current Parkinson’s disease drug treatment
- The patient has demonstrated a clear responsiveness to treatment with levodopa

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient is unable to swallow extended-release tablets or administer extended-release capsules via a feeding tube
- The patient has failed to adhere to an oral carbidopa/levodopa regimen or tolerate carbidopa/levodopa regimen via a feeding tube

If yes, continue to #3.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Has the physician optimized the patient's medication therapy as evidenced by **ALL** of the following?
- The patient had a change in levodopa/carbidopa dosing strategy or formulation
- The patient had a trial of or contraindication to TWO Parkinson disease agents from two different classes: dopamine agonist (ropinirole, pramipexole, rotigotine), monoamine oxidase-inhibitors (MAO-I) (selegiline, rasagiline), catechol-O-methyl transferase (COMT) inhibitors (entacapone, tolcapone), adenosine receptor antagonist A2A (Nourianz [istradefylline])

If yes, **approve for 6 months by GPID or GPI-14 with a quantity limit of #60mL per 30 days.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

APOMORPHINE - APOKYN

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **APOMORPHINE - APOKYN** requires the following rule(s) be met for approval:
You have advanced Parkinson's disease (PD: a type of movement disorder)
Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
The requested medication will be used for acute, intermittent treatment of hypomobility, 'OFF' episodes (period of symptoms in between doses) associated with advanced Parkinson's disease (a type of movement disorder)
You are experiencing at least 3 hours of 'off' time (period of symptoms in between doses) on your current Parkinson's disease drug treatment (medication for a type of movement disorder)
You have shown a clear responsiveness to treatment with levodopa
You meet ONE of the following:
- You are unable to swallow extended-release tablets or administer extended-release capsules through a feeding tube
- You have failed to adhere to (keep up with) an oral carbidopa/levodopa regimen or tolerate a carbidopa/levodopa regimen through a feeding tube

Your doctor has optimized your medication therapy as shown by ALL of the following:
- You had a change in levodopa/carbidopa dosing strategy or formulation
- You have tried or have a contraindication to (harmful for you to use) TWO Parkinson disease medications from two different classes: dopamine agonist (ropinirole, pramipexole, rotigotine), monoamine oxidase-inhibitors (MAO-I) (selegiline, rasagiline), catechol-O-methyl transferase (COMT) inhibitors (entacapone, tolcapone), adenosine receptor antagonist A2A (Nourianz [istradefylline])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

APOMORPHINE - APOKYN

RENEWAL CRITERIA

Does the patient have a diagnosis of advanced Parkinson's disease (PD) (ICD-10 Group G20) **AND** meet the following criterion?

The patient has experienced improvement with motor fluctuations during 'OFF' episodes while on the requested medication (e.g., improvement in speech, facial expression, tremor at rest, action or postural tremor of hands, rigidity, finger taps, hand movements, rapid alternating movements of hands, posture, leg agility, arising from chair)

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #60mL per 30 days.**

If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **APOMORPHINE - APOKYN** requires the following rule(s) be met for renewal:

You have advanced Parkinson's disease (PD: a type of movement disorder)

You have experienced improvement with motor fluctuations (changes in the ability to move) during 'OFF' episodes with the use of the requested medication (such as improvement in speech, facial expression, tremor [shaking] at rest, action or postural tremor of hands, rigidity, finger taps, hand movements, rapid alternating movements of hands, posture, leg agility, arising from chair)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Apokyn.

APOMORPHINE - ONAPGO

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
APOMORPHINE HCL	ONAPGO	01934		GPI-10 (7320301010)	BRAND = ONAPGO

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of advanced Parkinson's disease (PD) (ICD-10 Group G20) and meet **ALL** of the following criteria?

Onapgo will be used for the treatment of motor fluctuations associated with Parkinson's disease

Therapy is prescribed by or in consultation with a neurologist

The patient's disease is responsive to treatment with levodopa

The patient's current medication regimen, including levodopa, has been at a stable dose for at least 28 days

The patient has motor symptoms that are currently uncontrolled (defined as an average 'off' time of at least 3 hours per day, with a minimum of 2 hours each day)

The patient does not have any of the following: orthostatic hypotension, history of prolonged QTc (greater than 450 msec for male or greater than 470 msec for female), active or uncontrolled psychosis, active or uncontrolled depression

If yes, **approve for 3 months by GPID or GPI-14 with a quantity limit of #20mL per day.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
The patient is 6 years of age or older
Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
The requested medication will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PsA

If yes, **enter approval(s) by GPID or GPI-14 as follows:**
If the starter pack is requested for dosage titration, approve for #1 fill for the requested starter pack as follows:
10-20-30-75mg: #41 tablets per 28 days.
10-20-30mg Two Week Starter Pack: #27 tablets per 14 days.
10-20-30mg 28-day Starter Pack: #55 tablets per 28 days.
10-20mg 28-day Starter Pack: #55 tablets per 28 days.
Approve the requested strength for 6 months as follows:
75mg XR: #1 per day.
30mg: #2 per day.
20mg: #2 per day.

If no, continue to #2.

Does the patient have a diagnosis of plaque psoriasis (PsO) (ICD-10 L40.0)?

If yes, continue to #3.
If no, continue to #8.

APREMILAST

INITIAL CRITERIA (CONTINUED)

Is the patient's disease mild and the patient meets **ALL** of the following criteria?
- The patient is 18 years of age or older
- The patient had a trial of or contraindication to ONE clinical standard of care agent: a conventional systemic agent (e.g., methotrexate, acitretin, cyclosporine) OR a conventional topical agent (e.g., topical corticosteroids [e.g., betamethasone dipropionate, clobetasol propionate])
- The requested medication will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Zoryve (roflumilast)]) for the treatment of mild PsO

If yes, continue to #4.
If no, continue to #5.

Does the patient meet **ONE** of the following criteria?
- The patient was previously stable on another biologic and is switching to the requested medication
- The patient has a static Physician Global Assessment (sPGA) score of 2
- The patient has a Psoriasis Area and Severity Index (PASI) score of 2 to 9

If yes, **enter approval(s) by GPID or GPI-14 as follows:**
If the starter pack is requested for dosage titration, approve for #1 fill for the requested starter pack as follows:
10-20-30-75mg: #41 tablets per 28 days.
10-20-30mg Two Week Starter Pack: #27 tablets per 14 days.
10-20-30mg 28-day Starter Pack: #55 tablets per 28 days.
Approve the requested strength for 6 months as follows:
75mg XR: #1 per day.
30mg: #2 per day.

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's disease moderate to severe and the patient meets **ALL** of the following criteria?
- The patient is 6 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- The requested medication will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Zoryve (roflumilast)]) for the treatment of moderate to severe PsO

If yes, continue to #6.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

APREMILAST

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient has had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) OR PUVA (phototherapy) for the treatment of PsO
- The patient has a contraindication or intolerance to BOTH clinical standard of care therapies: an immunosuppressant AND PUVA (phototherapy) for the treatment of PsO
- The patient is switching from a different biologic (e.g., Humira [adalimumab]), PDE-4 inhibitor, or JAK inhibitor for the same indication

If yes, continue to #7.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient was previously stable on another biologic and is switching to the requested medication
- The patient has psoriasis covering 3 percent or more of body surface area (BSA)
- The patient has psoriatic lesions affecting the hands, feet, face, genital area, or scalp

If yes, **enter approval(s) by GPID or GPI-14 as follows:**
If the starter pack is requested for dosage titration, approve for #1 fill for the requested starter pack as follows:
10-20-30-75mg: #41 tablets per 28 days.
10-20-30mg Two Week Starter Pack: #27 tablets per 14 days.
10-20-30mg 28-day Starter Pack: #55 tablets per 28 days.
10-20mg 28-day Starter Pack: #55 tablets per 28 days.
Approve the requested strength for 6 months as follows:
75mg XR: #1 per day.
30mg: #2 per day.
20mg: #2 per day.

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

APREMILAST

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of Behcet's disease (ICD-10 M35.2) with oral ulcers or history of recurrent oral ulcers based on clinical symptoms and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- The patient had a trial of or contraindication to ONE or more conservative clinical standard of care treatments (e.g., colchicine, topical corticosteroid [e.g., triamcinolone], oral corticosteroid [e.g., prednisolone])
- The requested medication will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of Behcet's disease

If yes, **enter approval(s) by GPID or GPI-14 as follows:**
If the starter pack is requested for dosage titration, approve for #1 fill for the requested starter pack as follows:
10-20-30-75mg: #41 tablets per 28 days.
10-20-30mg Two Week Starter Pack: #27 tablets per 14 days.
10-20-30mg 28-day Starter Pack: #55 tablets per 28 days.
Approve the requested strength for 6 months as follows:
75mg XR: #1 per day.
30mg: #2 per day.

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.
Our guideline named **APREMILAST (Otezla, Otezla XR)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Plaque psoriasis (PsO: a type of skin condition)
- Behcet's disease (a type of inflammation disorder) with oral ulcers or history of recurrent oral ulcers based on clinical symptoms

If you have psoriatic arthritis, approval also requires:
- You are 6 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or dermatologist (a type of skin doctor)
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of psoriatic arthritis

(Initial denial text continued on next page)

APREMILAST

INITIAL CRITERIA (CONTINUED)

If you have mild plaque psoriasis, approval also requires:
- You are 18 years of age or older
- You have tried or have a contraindication to (harmful for you to use) one clinical standard of care agent: a conventional (standard) systemic (treatment that targets the entire body) medication (such as methotrexate, acitretin, cyclosporine) OR a conventional topical medication (such as topical corticosteroids [such as betamethasone dipropionate, clobetasol propionate])
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Zoryve (roflumilast)]) for the treatment of mild plaque psoriasis
- You meet ONE of the following:
  - You were previously stable on another biologic and are switching to the requested medication
  - You have a static Physician Global Assessment (sPGA: a measure used to evaluate severity of the disease) score of 2
  - You have a Psoriasis Area and Severity Index (PASI: used to measure the severity and extent of psoriasis) score of 2 to 9

If you have moderate to severe plaque psoriasis, approval also requires:
- You are 6 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Zoryve (roflumilast)]) for the treatment of moderate to severe plaque psoriasis
- You meet ONE of the following:
  - You have had at least a 3-month trial of one clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis
  - You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of medication that decreases the body's immune response) and PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis
  - You are switching from a different biologic (such as Humira [adalimumab]), PDE-4 (phosphodiesterase-4) inhibitor, or JAK (Janus kinase) inhibitor for the same indication

(Initial denial text continued on next page)

APREMILAST

INITIAL CRITERIA (CONTINUED)

You meet ONE of the following:
- You were previously stable on another biologic and are switching to the requested medication
- You have psoriasis covering 3 percent or more of body surface area (BSA)
- You have psoriatic lesions (rashes) affecting your hands, feet, face, genital area, or scalp

If you have Behcet's disease with oral ulcers or history of recurrent oral ulcers based on clinical symptoms, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You have tried or have a contraindication to (harmful for you to use) ONE or more conservative clinical standard of care treatments (such as colchicine, topical corticosteroid [such as triamcinolone], oral corticosteroid [such as prednisolone])
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Behcet's disease

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

APREMILAST

RENEWAL CRITERIA

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- The requested medication will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PsA

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
75mg XR: #1 per day.
30mg: #2 per day.
20mg: #2 per day.

If no, continue to #2.

Does the patient have a diagnosis of plaque psoriasis (PsO) (ICD-10 L40.0)?

If yes, continue to #3.
If no, continue to #5.

Is the patient's disease mild and the patient meets **ALL** of the following criteria?
- The patient has achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more OR a decrease in sPGA (static Physician Global Assessment) by at least a 2-point reduction from baseline
- The requested medication will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Zoryve (roflumilast)]) for the treatment of mild PsO

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
75mg XR: #1 per day.
30mg: #2 per day.

If no, continue to #4.

APREMILAST

RENEWAL CRITERIA (CONTINUED)

Is the patient's disease moderate to severe and the patient meets **ALL** of the following criteria?
- The patient has achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more
- The requested medication will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Zoryve (roflumilast)]) for the treatment of moderate to severe PsO

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
75mg XR: #1 per day.
30mg: #2 per day.
20mg: #2 per day.

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient have a diagnosis of Behcet's disease (ICD-10 M35.2) with oral ulcers or history of recurrent oral ulcers based on clinical symptoms and meet **ALL** of the following criteria?
- The patient has achieved or maintained clinical benefit compared to baseline (e.g., pain scores, number of ulcers)
- The requested medication will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of Behcet's disease

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
75mg XR: #1 per day.
30mg: #2 per day.

If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **APREMILAST (Otezla, Otezla XR)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Plaque psoriasis (PsO: a type of skin condition)
- Behcet's disease (a type of inflammation disorder) with oral ulcers or history of recurrent oral ulcers based on clinical symptoms

(Renewal denial text continued on next page)

APREMILAST

RENEWAL CRITERIA (CONTINUED)

If you have psoriatic arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase- 4] inhibitor) for the treatment of psoriatic arthritis

If you have mild plaque psoriasis, renewal also requires:
- You have achieved or maintained clear or minimal disease OR a decrease in Psoriasis Area and Severity Index (PASI: used to measure the severity and extent of psoriasis) of at least 50 percent or more OR a decrease in static Physician Global Assessment (sPGA: a measure used to evaluate severity of the disease) by at least a 2-point reduction from baseline
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Zoryve (roflumilast)]) for the treatment of mild plaque psoriasis

If you have moderate to severe plaque psoriasis, renewal also requires:
- You have achieved or maintained clear or minimal disease OR a decrease in Psoriasis Area and Severity Index (PASI: used to measure the severity and extent of psoriasis) of at least 50 percent or more
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Zoryve (roflumilast)]) for the treatment of moderate to severe plaque psoriasis

If you have Behcet's disease with oral ulcers or history of recurrent oral ulcers based on clinical symptoms, renewal also requires:
- You have achieved or maintained clinical benefit compared to baseline (such as an improvement in pain scores, number of ulcers)
- You will NOT use the requested medication concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Behcet's disease

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

APROCITENTAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
APROCITENTAN	TRYVIO	49465		GPI-10 (3618001000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of hypertension (ICD-10 I10) and meet **ALL** of the following criteria?

- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a cardiologist, nephrologist, or endocrinologist
- The patient's blood pressure is NOT controlled on at least three anti-hypertensive agents of different pharmacologic classes (e.g., an angiotensin receptor blocker [e.g., valsartan], a calcium channel blocker [e.g., amlodipine]), with at least one being a diuretic (e.g., hydrochlorothiazide), at maximally tolerated doses for at least 4 weeks
- The patient does NOT have resistant hypertension due to white coat effect, medical inertia, or poor therapeutic adherence
- The patient had a trial of or contraindication to ONE of the following clinical standard of care agent: spironolactone, eplerenone

If yes, **approve for 2 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **APROCITENTAN (Tryvio)** requires the following rule(s) be met for approval:

- You have hypertension (high blood pressure)
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor), nephrologist (a type of kidney doctor), or endocrinologist (a type of hormone doctor)
- Your blood pressure is NOT controlled on at least three anti-hypertensive medications (medications used to treat high blood pressure) with different mechanisms of action (such as an angiotensin receptor blocker [such as valsartan], a calcium channel blocker [such as amlodipine]), with at least one being a diuretic (such as hydrochlorothiazide), at maximally tolerated doses for at least 4 weeks
- You do NOT have resistant hypertension (a type of high blood pressure) due to white coat effect (a condition where blood pressure is higher in a medical setting), medical inertia (when healthcare providers do not make changes to treatment even if the medical condition is poorly controlled), or poor therapeutic adherence (not keeping up with therapy)
- You have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medication: spironolactone, eplerenone

ASCIMINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ASCIMINIB HYDROCHLORIDE	SCEMBLIX	47647		GPI-10 (2153180610)	

GUIDELINES FOR USE

Does the patient have a diagnosis of Philadelphia chromosome-positive chronic myeloid leukemia (Ph+ CML) in chronic phase (CP) (ICD-10 Group C92.1) **AND** meets the following criterion?
The patient is 18 years of age or older

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the patient's cancer newly diagnosed (e.g., starting or previously started Scemblix treatment at the time of diagnosis)?

If yes, **approve for 12 months by GPID or GPI-14 for the requested strength with a quantity limit as follows:**
20mg: #2 per day.
40mg: #2 per day.

If no, continue to #3.

Does the patient's cancer have the T315I mutation **AND** meets the following criterion?
The patient had a mutational analysis prior to initiation of therapy; AND Scemblix is appropriate based on the NCCN guideline table for treatment recommendations based on BCR-ABL1 mutation profile *(Please see header CML-5 of the current NCCN guidelines)*

If yes, **approve for 12 months by GPID or GPI-14 for the requested strength with a quantity limit as follows:**
40mg: #8 per day.
100mg: #4 per day.

If no, continue to #4.

ASCIMINIB

GUIDELINES FOR USE (CONTINUED)

Has the patient been previously treated **AND** meets the following criterion?
The patient had a mutational analysis prior to initiation of therapy; AND Scemblix is appropriate based on the NCCN guideline table for treatment recommendations based on BCR-ABL1 mutation profile *(Please see header CML-5 of the current NCCN guidelines)*

If yes, **approve for 12 months by GPID or GPI-14 for the requested strength with a quantity limit as follows:**
20mg: #2 per day.
40mg: #2 per day.

If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ASCIMINIB (Scemblix)** requires the following rule(s) be met for approval:
You have Philadelphia chromosome-positive chronic myeloid leukemia (Ph+ CML: a type of blood cell cancer) in chronic phase (CP)
You are 18 years of age or older
You meet ONE of the following:
- Your cancer is newly diagnosed (such as you are starting or previously started Scemblix treatment at the time your condition was identified)
- Your cancer has the T315I mutation (abnormal change in a type of gene); you had a mutational analysis (a type of lab test) prior to the start of therapy; AND Scemblix is appropriate based on the National Comprehensive Cancer Network (NCCN) guideline table for treatment recommendations based on the profile for the breakpoint cluster region-Abelson murine leukemia 1 (BCR-ABL1: a type of gene) mutation
- You have been previously treated AND you had a mutational analysis prior to the start of therapy and Scemblix is appropriate based on the NCCN guideline table for treatment recommendations based on the profile for the BCR-ABL1 mutation

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

PRIOR AUTHORIZATION GUIDELINES

ASFOTASE ALFA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ASFOTASE ALFA	STRENSIQ	42649		GPI-10 (3090561000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of perinatal/infantile-onset hypophosphatasia (HPP) (ICD-10 E83.39) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an endocrinologist
- The patient was 6 months of age or younger at hypophosphatasia (HPP) onset

If yes, continue to #2.
If no, continue to #4.

Is the patient positive for a tissue non-specific alkaline phosphatase (TNSALP) (ALPL) gene mutation as confirmed by genetic testing?

If yes, continue to #7.
If no, continue to #3.

Does the patient meet at least **TWO** of the following criteria?
- The patient has a serum alkaline phosphatase (ALP) level below the normal range for patient age
- The patient has an elevated serum pyridoxal-5'-phosphate (PLP) level AND has not received vitamin B6 supplementation in the previous week
- The patient has a urine phosphoethanolamine (PEA) level above the normal range for patient age
- The patient has radiographic evidence of hypophosphatasia (HPP) (e.g., flared and frayed metaphyses, osteopenia, widened growth plates, areas of radiolucency or sclerosis)
- The patient has at least TWO of the following:
  - Rachitic chest deformity
  - Craniosynostosis (premature closure of skull bones)
  - Delay in skeletal growth resulting in delay of motor development
  - History of vitamin B6 dependent seizures
  - Nephrocalcinosis or history of elevated serum calcium
  - History or presence of non-traumatic postnatal fracture and delayed fracture healing

If yes, continue to #7.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ASFOTASE ALFA

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of juvenile-onset hypophosphatasia (HPP) (ICD-10 E83.39) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an endocrinologist
The patient was 18 years of age or younger at hypophosphatasia (HPP) onset

If yes, continue to #5.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient positive for a tissue non-specific alkaline phosphatase (TNSALP) (ALPL) gene mutation as confirmed by genetic testing?

If yes, continue to #7.
If no, continue to #6.

Does the patient meet at least **TWO** of the following criteria?
The patient has a serum alkaline phosphatase (ALP) level below the normal range for patient age
The patient has an elevated serum pyridoxal-5'-phosphate (PLP) level AND has not received vitamin B6 supplementation in the previous week
The patient has a urine phosphoethanolamine (PEA) level above the normal range for patient age
The patient has a radiographic evidence of hypophosphatasia (HPP) (e.g., flared and frayed metaphyses, osteopenia, osteomalacia, widened growth plates, areas of radiolucency or sclerosis)
The patient has at least TWO of the following:
Rachitic deformities (rachitic chest, bowed legs, knock-knees)
Premature loss of primary teeth prior to 5 years of age
Delay in skeletal growth resulting in delay of motor development
History or presence of non-traumatic fractures or delayed fracture healing

If yes, continue to #7.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ASFOTASE ALFA

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ANY** of the following criteria?
- The patient is currently receiving treatment with a bisphosphonate (e.g., Boniva [ibandronate], Fosamax [alendronate], Actonel [risedronate])
- The patient's serum calcium or phosphate level is below the normal range
- The patient has a treatable form of rickets

If yes, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline

If no, **approve for 6 months by HICL or GPI-10.**

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ASFOTASE ALFA (Strensiq)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Perinatal/infantile-onset hypophosphatasia (HPP: a type of genetic condition)
- Juvenile-onset hypophosphatasia (HPP: a type of genetic condition)

If you have perinatal/infantile-onset hypophosphatasia, approval also requires:
- You were 6 months of age or younger at the onset of hypophosphatasia
- Therapy is prescribed by or in consultation with an endocrinologist (hormone doctor)
- You will NOT use Strensiq with a bisphosphonate (such as Boniva [ibandronate], Fosamax [alendronate], Actonel [risedronate])
- Your serum (blood) calcium and phosphate levels are NOT below the normal range
- You do NOT have a treatable form of rickets (type of bone condition in children)

(Initial denial text continued on next page)

ASFOTASE ALFA

INITIAL CRITERIA (CONTINUED)

You meet ONE of the following:
- You are positive for a tissue non-specific alkaline phosphatase (TNSALP: a type of enzyme) (ALPL) gene mutation as confirmed by genetic testing
- You meet at least TWO of the following:
  - Your serum alkaline phosphatase (type of enzyme) level is below the normal range for your age
  - Your serum pyridoxal-5'-phosphate (PLP: type of lab test) level is elevated AND you have not received vitamin B6 supplementation in the previous week
  - Your urine phosphoethanolamine (PEA: type of lab) level is above the normal range for your age
  - You have radiographic evidence of hypophosphatasia [such as flared and frayed metaphyses (narrow part of long bone), osteopenia (bone loss), widened growth plates, areas of radiolucency (appearing dark/black on x-ray image) or sclerosis (hardening of an area)]
  - You have TWO or more of the following:
    - Rachitic chest deformity (chest bones are not normal)
    - Craniosynostosis (premature closure of skull bones)
    - Delay in skeletal growth resulting in delay of motor development
    - History of vitamin B6 dependent seizures
    - Nephrocalcinosis (high calcium levels in kidney) or history of elevated serum calcium
    - History or presence of fracture after birth not due to injury or delayed fracture healing

(Initial denial text continued on next page)

CONTINUED ON NEXT PAGE

ASFOTASE ALFA

INITIAL CRITERIA (CONTINUED)

If you have juvenile-onset hypophosphatasia, approval also requires:
You were 18 years of age or younger at the onset of hypophosphatasia
Therapy is prescribed by or in consultation with an endocrinologist (hormone doctor)
You will NOT use Strensiq with a bisphosphonate (such as Boniva [ibandronate], Fosamax [alendronate], Actonel [risedronate])
Your serum (blood) calcium and phosphate levels are NOT below the normal range
You do NOT have a treatable form of rickets (softening and weakening of bones in children, usually due to low vitamin D)
You meet ONE of the following:
You are positive for a tissue non-specific alkaline phosphatase (TNSALP: a type of enzyme) (ALPL) gene mutation as confirmed by genetic testing
You meet at least TWO of the following:
Your serum alkaline phosphatase (type of enzyme) level is below the normal range for your age
Your serum pyridoxal-5'-phosphate (PLP: type of lab test) level is elevated AND you have not received vitamin B6 supplementation in the previous week
Your urine phosphoethanolamine (PEA: type of lab test) level is above the normal range for your age
You have radiographic evidence of hypophosphatasia [such as flared and frayed metaphyses (narrow part of long bone), osteopenia (bone loss), osteomalacia (bone softening), widened growth plates, areas of radiolucency (appearing dark/black on x-ray image) or sclerosis (hardening of an area)]
You have TWO or more of the following:
Rachitic deformities (rachitic chest, bowed legs, knock-knees)
Premature loss of primary teeth prior to 5 years of age
Delay in skeletal growth leading to motor development delay
History or presence of fracture after birth not due to injury or delayed fracture healing

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ASFOTASE ALFA

RENEWAL CRITERIA

During the last 6 months of treatment, has the patient experienced an improvement in the skeletal characteristics of hypophosphatasia (HPP) (e.g., improvement of the irregularity of the provisional zone of calcification, physeal widening, metaphyseal flaring, radiolucencies, patchy osteosclerosis, ratio of mid-diaphyseal cortex to bone thickness, gracile bones, bone formation and fractures)?

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Is the patient currently receiving treatment with a bisphosphonate (e.g., Boniva [ibandronate], Fosamax [alendronate], Actonel [risedronate])?

If yes, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

If no, **approve for 12 months by HICL or by GPI-10.**

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ASFOTASE ALFA (Strensiq)** requires that the following rule(s) be met for renewal:
You have experienced an improvement in the skeletal characteristics (bones, teeth) of hypophosphatasia (HPP: type of genetic condition). Characteristics may include irregularity of the provisional zone of calcification (area on long bone for calcium build-up), physeal widening (area of bone that helps length growth), metaphyseal flaring (a narrow part of long bone grows), radiolucencies (appearing dark/black on x-ray image), patchy osteosclerosis (parts of abnormal hardening of bone), ratio of mid-diaphyseal cortex to bone thickness, gracile (slender) bones, bone formation and fractures.
You will NOT use Strensiq with a bisphosphonate (such as Boniva [ibandronate], Fosamax [alendronate], Actonel [risedronate]).

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ASPARAGINASE ERWINIA-RYWN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ASPARAGINASE ERWINIA-RYWN	RYLAZE	47474		GPI-10 (2125001060)	

GUIDELINES FOR USE

Does the patient have a diagnosis of acute lymphoblastic leukemia (ALL) (ICD-10 Group C91.0) or lymphoblastic lymphoma (LBL) (ICD-10 Group C83.5) and meet **ALL** of the following criteria?
The patient is 1 month of age or older
The patient has developed a hypersensitivity to E. coli-derived asparaginase
Rylaze will be used as a component of a multi-agent chemotherapeutic regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ASPARAGINASE ERWINIA-RYWN (Rylaze)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Acute lymphoblastic leukemia (ALL: a type of blood cancer)
- Lymphoblastic lymphoma (LBL: a type of immune system cancer)

You are 1 month of age or older
You have developed a hypersensitivity (allergic reaction) to E.coli-derived asparaginase (an enzyme/protein that is from a type of bacteria)
Rylaze will be used as a component of a multi-agent chemotherapeutic regimen (treatment using multiple drugs)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

ATEZOLIZUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ATEZOLIZUMAB	TECENTRIQ	43408		GPI-10 (2135821500)	

GUIDELINES FOR USE

Does the patient have a diagnosis of non-small cell lung cancer (NSCLC) (ICD-10 Group C34) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, continue to #2.
If no, continue to #6.

Is the patient's cancer stage II to IIIA and the patient meets **ALL** of the following criteria?
Tecentriq will be used as adjuvant treatment following resection and platinum-based chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)
The patient has tumor(s) that express PD-L1 on at least 1% of tumor cells, as determined by an FDA-authorized test

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Is the patient's cancer metastatic without an EGFR or ALK mutation and the patient meets **ONE** of the following criteria?
The patient has experienced disease progression during or following treatment with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)
The patient has tumor(s) that have high PD-L1 expression (PD-L1 stained at least 50% of tumor cells [TC at least 50%] or PD-L1 stained tumor-infiltrating immune cells [IC] covering at least 10% of the tumor area [IC at least 10%]), as determined by an FDA-authorized test

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #4.

Is the patient's cancer metastatic with an ALK mutation **AND** the patient meets the following criterion?
The patient has experienced disease progression during or following treatment with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin) AND ALK-directed therapy (e.g., Xalkori [crizotinib], Zykadia [ceritinib])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #5.

CONTINUED ON NEXT PAGE

ATEZOLIZUMAB

GUIDELINES FOR USE (CONTINUED)

Is the patient's cancer metastatic with an EGFR mutation **AND** the patient meets the following criterion?
The patient has experienced disease progression during or following treatment with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin) AND EGFR-directed therapy (e.g., Tarceva [erlotinib], Iressa [gefitinib], Gilotrif [afatinib])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient have a diagnosis of metastatic non-squamous non-small cell lung cancer (NSq NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's cancer does NOT have EGFR or ALK genomic tumor aberrations
Tecentriq will be used in combination with bevacizumab, paclitaxel, and carboplatin, OR in combination with paclitaxel protein-bound and carboplatin

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient have a diagnosis of extensive-stage small cell lung cancer (ES-SCLC) (ICD-10 Group C34) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, continue to #8.
If no, continue to #9.

Does the patient meet **ONE** of the following criteria?
Tecentriq will be used in combination with carboplatin and etoposide
Tecentriq will be used in combination with Zepzelca (lurbinectedin) AND the patient's disease has not progressed after first-line induction therapy with Tecentriq or Tecentriq Hybreza (atezolizumab and hyaluronidase-tqjs), carboplatin, and etoposide

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

ATEZOLIZUMAB

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of unresectable or metastatic hepatocellular carcinoma (HCC) (ICD-10 C22.0) and meet **ALL** of the following criteria?
The patient has NOT received prior systemic therapy
Tecentriq will be used in combination with bevacizumab

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #10.

Does the patient have a diagnosis of unresectable or metastatic melanoma (ICD-10 Group C43) and meet **ALL** of the following criteria?
Tecentriq will be used in combination with cobimetinib (Cotellic) and vemurafenib (Zelboraf)
The patient's cancer is BRAF V600 mutation-positive

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #11.

Does the patient have a diagnosis of unresectable or metastatic alveolar soft part sarcoma (ASPS) (ICD-10 C49.9) **AND** meet the following criterion?
The patient is 2 years of age or older

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #12.

Does the patient have a diagnosis of muscle invasive bladder cancer (MIBC) (ICD-10 Group C67) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
Tecentriq will be used as adjuvant treatment after a cystectomy
The patient has circulating tumor DNA molecular residual disease (ctDNA MRD), as determined by an FDA-authorized test

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

ATEZOLIZUMAB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ATEZOLIZUMAB (Tecentriq)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Non-small cell lung cancer (NSCLC: a type of lung cancer)
- Metastatic non-squamous non-small cell lung cancer (NSq NSCLC: a type of lung cancer that has spread to other parts of the body)
- Extensive-stage small cell lung cancer (ES-SCLC: a type of lung cancer)
- Unresectable or metastatic hepatocellular carcinoma (HCC: a type of liver cancer that cannot be removed by surgery or has spread to other parts of the body)
- Unresectable or metastatic melanoma (a type of skin cancer that cannot be removed by surgery or has spread to other parts of the body)
- Unresectable or metastatic alveolar soft part sarcoma (ASPS: a type of soft tissue cancer that cannot be removed by surgery or has spread to other parts of the body)
- Muscle invasive bladder cancer (MIBC: a type of bladder cancer that has spread to the muscle)

(Denial text continued on next page)

ATEZOLIZUMAB

GUIDELINES FOR USE (CONTINUED)

If you have non-small cell lung cancer, approval also requires:
- You are 18 years of age or older
- You meet ONE of the following:
  - Your cancer is stage II to IIIA; Tecentriq will be used as adjuvant (add-on) treatment following resection (removal of tissue or organ) and platinum-based chemotherapy (a type of therapy to treat cancer such as cisplatin, carboplatin, oxaliplatin); AND your tumor(s) express programmed death-ligand 1 (PD-L1: type of protein) on at least 1% of tumor cells, as determined by a Food and Drug Administration (FDA)-authorized test
  - Your cancer is metastatic (has spread to other parts of the body) and you meet ONE of the following:
    - Your cancer does NOT have an epidermal growth factor receptor (EGFR: a type of protein) or anaplastic lymphoma kinase (ALK: a type of protein) mutation (abnormal change in a type of gene); AND your disease has gotten worse during or after treatment with a platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin)
    - Your cancer does NOT have an epidermal growth factor receptor (EGFR: a type of protein) or anaplastic lymphoma kinase (ALK: a type of protein) mutation (abnormal change in a type of gene); AND you have tumor(s) that have high programmed death-ligand 1 (PD-L1: type of protein) expression (PD-L1 stained at least 50% of tumor cells OR PD-L1 stained tumor-infiltrating immune cells covering at least 10% of the tumor area), as determined by a Food and Drug Administration (FDA) authorized test
    - Your cancer has an anaplastic lymphoma kinase (ALK: a type of protein) mutation (abnormal change in a type of gene); your disease has gotten worse during or after treatment with a platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin) AND ALK-directed therapy (such as Xalkori [crizotinib], Zykadia [ceritinib])
    - Your cancer has an epidermal growth factor receptor (EGFR: a type of protein) mutation (abnormal change in a type of gene); your disease has gotten worse during or after treatment with a platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin) AND EGFR-directed therapy (such as Tarceva [erlotinib], Iressa [gefitinib], Gilotrif [afatinib])

ATEZOLIZUMAB

GUIDELINES FOR USE (CONTINUED)

If you have metastatic non-squamous non-small cell lung cancer, approval also requires:
- You are 18 years of age or older
- Your cancer does NOT have epidermal growth factor receptor (EGFR: a type of protein) or anaplastic lymphoma kinase (ALK: a type of protein) genomic tumor abnormalities (type of abnormal gene)
- Tecentriq will be used in combination with bevacizumab, paclitaxel, and carboplatin OR in combination with paclitaxel protein-bound and carboplatin

If you have extensive-stage small cell lung cancer, approval also requires:
- You are 18 years of age or older
- You meet ONE of the following:
  - Tecentriq will be used in combination with carboplatin and etoposide
  - Tecentriq will be used in combination with Zepzelca (lurbinectedin) AND your disease has not progressed (worsened) after first-line induction therapy (start of treatment) with Tecentriq or Tecentriq Hybreza (atezolizumab and hyaluronidase-tqjs), carboplatin, and etoposide

If you have unresectable or metastatic hepatocellular carcinoma, approval also requires:
- You have NOT previously been treated with systemic therapy (treatment that targets the entire body)
- Tecentriq will be used in combination with bevacizumab

If you have unresectable or metastatic melanoma, approval also requires:
- Tecentriq will be used in combination with cobimetinib (Cotellic) and vemurafenib (Zelboraf)
- Your cancer is BRAF V600 mutation (abnormal change in a type of gene)-positive

If you have unresectable or metastatic alveolar soft part sarcoma, approval also requires:
- You are 2 years of age or older

If you have muscle invasive bladder cancer, approval also requires:
- You are 18 years of age or older
- Tecentriq will be used as adjuvant (add-on) treatment after a cystectomy (bladder removal surgery)
- You have circulating tumor DNA molecular residual disease (ctDNA MRD: traces of cancer DNA in your body), as determined by a Food and Drug Administration (FDA)-authorized test

ATEZOLIZUMAB-HYALURONIDASE-TQJS

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ATEZOLIZUMAB-HYALURONIDASE-TQJS	TECENTRIQ HYBREZA	49873		GPI-10 (2199000205)	

GUIDELINES FOR USE

Does the patient have a diagnosis of non-small cell lung cancer (NSCLC) (ICD-10 Group C34) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, continue to #2.
If no, continue to #6.

Is the patient's cancer stage II to IIIA and the patient meets **ALL** of the following criteria?
Tecentriq Hybreza will be used as adjuvant treatment following resection and platinum-based chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)
The patient has tumor(s) that express PD-L1 on at least 1% of tumor cells, as determined by an FDA-authorized test

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Is the patient's cancer metastatic without an EGFR or ALK mutation and the patient meets **ONE** of the following criteria?
The patient has experienced disease progression during or following treatment with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)
The patient has tumor(s) that have high PD-L1 expression (PD-L1 stained at least 50% of tumor cells [TC at least 50%] or PD-L1 stained tumor-infiltrating immune cells [IC] covering at least 10% of the tumor area [IC at least 10%]), as determined by an FDA-authorized test

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #4.

Is the patient's cancer metastatic with an ALK mutation **AND** the patient meets the following criterion?
The patient has experienced disease progression during or following treatment with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin) AND ALK-directed therapy (e.g., Xalkori [crizotinib], Zykadia [ceritinib])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #5.

GUIDELINES FOR USE (CONTINUED)

Is the patient's cancer metastatic with an EGFR mutation **AND** the patient meets the following criterion?
The patient has experienced disease progression during or following treatment with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin) AND EGFR-directed therapy (e.g., Tarceva [erlotinib], Iressa [gefitinib], Gilotrif [afatinib])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient have a diagnosis of metastatic non-squamous non-small cell lung cancer (NSq NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's cancer does NOT have EGFR or ALK genomic tumor aberrations
Tecentriq Hybreza will be used in combination with bevacizumab, paclitaxel, and carboplatin, OR in combination with paclitaxel protein-bound and carboplatin

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient have a diagnosis of extensive-stage small cell lung cancer (ES-SCLC) (ICD-10 Group C34) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, continue to #8.
If no, continue to #9.

Does the patient meet **ONE** of the following criteria?
Tecentriq Hybreza will be used in combination with carboplatin and etoposide
Tecentriq Hybreza will be used in combination with Zepzelca (lurbinectedin) AND the patient's disease has not progressed after first-line induction therapy with Tecentriq Hybreza or intravenous Tecentriq (atezolizumab), carboplatin, and etoposide

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of unresectable or metastatic hepatocellular carcinoma (HCC) (ICD-10 C22.0) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has NOT received prior systemic therapy
Tecentriq Hybreza will be used in combination with bevacizumab

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #10.

Does the patient have a diagnosis of unresectable or metastatic melanoma (ICD-10 Group C43) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
Tecentriq Hybreza will be used in combination with cobimetinib (Cotellic) and vemurafenib (Zelboraf)
The patient's cancer is BRAF V600 mutation-positive, as determined by an FDA-approved test

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #11.

Does the patient have a diagnosis of unresectable or metastatic alveolar soft part sarcoma (ASPS) (ICD-10 C49.9) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #12.

Does the patient have a diagnosis of muscle invasive bladder cancer (MIBC) (ICD-10 Group C67) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
Tecentriq Hybreza will be used as adjuvant treatment after a cystectomy
The patient has circulating tumor DNA molecular residual disease (ctDNA MRD), as determined by an FDA-authorized test

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

ATEZOLIZUMAB-HYALURONIDASE-TQJS

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ATEZOLIZUMAB-HYALURONIDASE-TQJS (Tecentriq Hybreza)** requires the following rule(s) be met for approval:
You have ONE of the following:

- Non-small cell lung cancer (NSCLC: a type of lung cancer)
- Metastatic non-squamous non-small cell lung cancer (NSq NSCLC: a type of lung cancer that has spread to other parts of the body)
- Extensive-stage small cell lung cancer (ES-SCLC: a type of lung cancer)
- Unresectable or metastatic hepatocellular carcinoma (HCC: a type of liver cancer that cannot be completely removed by surgery or has spread to other parts of the body)
- Unresectable or metastatic melanoma (a type of skin cancer that cannot be completely removed by surgery or has spread to other parts of the body)
- Unresectable or metastatic alveolar soft part sarcoma (ASPS: a type of soft tissue cancer that cannot be completely removed by surgery or has spread to other parts of the body)
- Muscle invasive bladder cancer (MIBC: a type of bladder cancer that has spread to the muscle)

(Denial text continued on next page)

GUIDELINES FOR USE (CONTINUED)

If you have non-small cell lung cancer, approval also requires:

You are 18 years of age or older

You meet ONE of the following:

Your cancer is Stage II to IIIA; Tecentriq Hybreza will be used as adjuvant treatment (additional treatment) following resection (removal of tissue or organ) and platinum-based chemotherapy (such as cisplatin, carboplatin, oxaliplatin); AND your tumor(s) express programmed death-ligand 1 (PD-L1: type of protein) on at least 1% of tumor cells, as determined by a Food and Drug Administration (FDA)-authorized test

Your cancer is metastatic (has spread to other parts of the body) and you meet ONE of the following:

Your cancer does NOT have an epidermal growth factor receptor (EGFR: a type of protein) or anaplastic lymphoma kinase (ALK: a type of protein) mutation (abnormal change in a type of gene); AND you have experienced disease progression (worsening) during or after treatment with platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin)

Your cancer does NOT have an epidermal growth factor receptor (EGFR: a type of protein) or anaplastic lymphoma kinase (ALK: a type of protein) mutation (abnormal change in a type of gene); AND you have tumors that have high programmed death-ligand 1 (PD-L1: type of protein) expression (PD-L1 stained at least 50% of tumor cells OR PD-L1 stained tumor-infiltrating immune cells covering at least 10% of the tumor area), as determined by a Food and Drug Administration (FDA)- authorized test

Your cancer has an anaplastic lymphoma kinase (ALK: a type of protein) mutation (abnormal change in a type of gene), and your disease has gotten worse during or after treatment with platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin) AND ALK-directed therapy (such as Xalkori [crizotinib], Zykadia [ceritinib])

Your cancer has an epidermal growth factor receptor (EGFR: a type of protein) mutation (abnormal change in a type of gene), and your disease has gotten worse during or after treatment with platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin) AND EGFR-directed therapy (such as Tarceva [erlotinib], Iressa [gefitinib], Gilotrif [afatinib])

ATEZOLIZUMAB-HYALURONIDASE-TQJS

GUIDELINES FOR USE (CONTINUED)

If you have metastatic non-squamous non-small cell lung cancer, approval also requires:
- You are 18 years of age or older
- Your cancer does NOT have epidermal growth factor receptor (EGFR: a type of protein) or anaplastic lymphoma kinase (ALK: a type of protein) genomic tumor abnormalities (type of abnormal gene)
- Tecentriq Hybreza will be used in combination with bevacizumab, paclitaxel, and carboplatin, OR in combination with paclitaxel protein-bound and carboplatin

If you have extensive-stage small cell lung cancer, approval also requires:
- You are 18 years of age or older
- You meet ONE of the following:
  - Tecentriq Hybreza will be used in combination with carboplatin and etoposide
  - Tecentriq Hybreza will be used in combination with Zepzelca (lurbinectedin) AND your disease has not progressed (worsened) after first-line induction therapy (start of treatment) with Tecentriq Hybreza or intravenous (injection into the vein) Tecentriq (atezolizumab), carboplatin, and etoposide

If you have unresectable or metastatic hepatocellular carcinoma, approval also requires:
- You are 18 years of age or older
- You have NOT previously been treated with systemic therapy (treatment that targets the entire body)
- Tecentriq Hybreza will be used in combination with bevacizumab

If you have unresectable or metastatic melanoma, approval also requires:
- You are 18 years of age or older
- Tecentriq Hybreza will be used in combination with cobimetinib (Cotellic) and vemurafenib (Zelboraf)
- Your cancer is BRAF V600 mutation (abnormal change in a type of gene)-positive, as determined by a Food and Drug Administration (FDA)-approved test

If you have unresectable or metastatic alveolar soft part sarcoma, approval also requires:
- You are 18 years of age or older

If you have muscle invasive bladder cancer, approval also requires:
- You are 18 years of age or older
- Tecentriq Hybreza will be used as adjuvant (add-on) treatment after a cystectomy (bladder removal surgery)
- You have circulating tumor DNA molecular residual disease (ctDNA MRD: traces of cancer DNA in your body), as determined by a Food and Drug Administration (FDA)-authorized test

PRIOR AUTHORIZATION GUIDELINES

ATOGEPANT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ATOGEPANT	QULIPTA	47599		GPI-10 (6770101000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of episodic migraines and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Qulipta is prescribed for the preventive treatment of migraines
- Qulipta will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet]) for migraine prevention

If yes, **approve for 6 months by HICL or GPI-10.**
If no, continue to #2.

Does the patient have a diagnosis of chronic migraines (ICD-10 Groups G43.7, G43.E) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Qulipta is prescribed for the preventive treatment of migraines
- Qulipta will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet]) for migraine prevention

If yes, **approve for 6 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ATOGEPANT

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ATOGEPANT (Qulipta)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Episodic migraines (a type of headache)
- Chronic migraines (a type of headache)

If you have episodic migraines (0-14 headache days per month), approval also requires:
- You are 18 years of age or older
- Qulipta is prescribed for the preventive treatment of migraines (a type of headache)
- You will NOT use Qulipta concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet]) for migraine (a type of headache) prevention

If you have chronic migraines (15 or more headache days per month), approval also requires:
- You are 18 years of age or older
- Qulipta is prescribed for the preventive treatment of migraines (a type of headache)
- You will NOT use Qulipta concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet]) for migraine (a type of headache) prevention

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ATOGEPANT

RENEWAL CRITERIA

Is the request for the preventive treatment of migraines **AND** the patient meets the following criterion?
- Qulipta will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet]) for migraine prevention

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient has experienced a reduction in migraine or headache frequency of at least 2 days per month with Qulipta therapy
- The patient has experienced a reduction in migraine severity with Qulipta therapy
- The patient has experienced a reduction in migraine duration with Qulipta therapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ATOGEPANT (Qulipta)** requires the following rule(s) be met for renewal:
The request is for the preventive treatment of migraines (a type of headache)
You will NOT use Qulipta concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet]) for migraine (a type of headache) prevention
You meet ONE of the following:
- You have experienced a decrease in migraine (a type of headache) or headache frequency of at least 2 days per month with Qulipta therapy
- You have experienced a decrease in migraine (a type of headache) severity with Qulipta therapy
- You have experienced a decrease in migraine (a type of headache) duration with Qulipta therapy

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ATORVASTATIN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ATORVASTATIN CALCIUM	ATORVALIQ		53672	GPI-14 (39400010101810)	

GUIDELINES FOR USE

Does the patient have a contraindication to or is unable to swallow atorvastatin oral tablets?

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the patient also requesting a zero-dollar cost share exception (i.e., the plan follows Affordable Care Act [ACA] recommendations and is linked to MedImpact's Essential Health Benefit Tables)?

If yes, continue to #3.
If no, **approve for 12 months by GPID or GPI-14 with a quantity limit of #20 mL per day.**

Does the patient meet **ALL** of the following criteria?
The patient is between 40 to 75 years old
The requested quantity is within the low to moderate intensity daily dosage of 10mg to 20mg
The patient is NOT concurrently taking any of the following secondary prevention medications for cardiovascular disease:
Aspirin/dipyridamole (Aggrenox)
Clopidogrel (Plavix)
Dipyridamole
Nitroglycerin (oral, sublingual, transdermal, translingual dosage forms)
Prasugrel (Effient)
Ticagrelor (Brilinta)
Ticlopidine
Vorapaxar (Zontivity)

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #5 mL per day at zero copay.**

If no, **approve for 12 months by GPID or GPI-14 with a quantity limit of #20 mL per day.**

ATORVASTATIN

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ATORVASTATIN (Atorvaliq)** requires the following rule(s) be met for approval:
You have a contraindication to (harmful for you to use) or are unable to swallow atorvastatin oral tablets
Requests for zero-dollar cost share also requires the following:
You are between 40 to 75 years old
The requested quantity is within the low to moderate intensity daily dosage of 10mg to 20mg
You are NOT concurrently (at the same time) taking any of the following secondary prevention medications for cardiovascular disease (heart disease):
Aspirin/dipyridamole (Aggrenox)
Clopidogrel (Plavix)
Dipyridamole
Nitroglycerin (oral, sublingual, transdermal, translingual dosage forms)
Prasugrel (Effient)
Ticagrelor (Brilinta)
Ticlopidine
Vorapaxar (Zontivity)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Atorvaliq.

This guideline also applies to plans where the pharmacy benefit allows for coverage Atorvaliq at zero copay. The override criteria allow patient a zero copay by waiving the applicable cost-sharing to Atorvaliq, which is included in the MedImpact EHB Zero Dollar Copay List.

PRIOR AUTHORIZATION GUIDELINES

ATRASENTAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ATRASENTAN HYDROCHLORIDE	VANRAFIA	50412		GPI-10 (5648250720)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of primary immunoglobulin A nephropathy (IgAN) (ICD-10 Group N02.B) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient is at risk of rapid disease progression (e.g., urine protein-to-creatinine ratio [UPCR] of at least 1.5 g/g)
Therapy is prescribed by or in consultation with a nephrologist
The patient's diagnosis is confirmed by a biopsy
The patient has proteinuria of at least 0.5 g/day
The patient has an eGFR of at least 30 mL/min/1.73 m(2)
The patient has tried an ACE inhibitor (e.g., benazepril, lisinopril) or an ARB (e.g., losartan, valsartan) for at least 3 months at a maximum tolerated dose and will continue use, OR has a contraindication to both drug classes

If yes, **approve for 9 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ATRASENTAN (Vanrafia)** requires the following rule(s) be met for approval:
You have primary immunoglobulin A nephropathy (IgAN: a type of kidney disease)
You are 18 years of age or older
You are at risk of rapid disease progression (such as a urine protein-to-creatinine ratio [UPCR: a test that measures the amount of protein in urine] of at least 1.5 g/g)
Therapy is prescribed by or in consultation with a nephrologist (a type of kidney doctor)
Your diagnosis is confirmed by a biopsy (removal of cells or tissue for examination)
You have proteinuria (high levels of protein in the urine) of at least 0.5 g/day
You have an estimated glomerular filtration rate (eGFR: a tool for evaluating kidney function) of at least 30 mL/min/1.73 m(2)
(Initial denial text continued on next page)

ATRASENTAN

RENEWAL CRITERIA

Does the patient have a diagnosis of primary immunoglobulin A nephropathy (IgAN) (ICD-10 Group N02.B) and meet **ONE** of the following criteria?
The patient has had a reduction in proteinuria
The patient has improved or stable kidney function compared to baseline

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ATRASENTAN (Vanrafia)** requires the following rule(s) be met for renewal:
You have primary immunoglobulin A nephropathy (IgAN: a type of kidney disease)
You meet ONE of the following:
- You have had a reduction (decrease) in proteinuria (a condition with high levels of protein in the urine)
- You have improved or stable kidney function compared to baseline (before starting Vanrafia)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Vanrafia.

AVACOPAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AVACOPAN	TAVNEOS	47626		GPI-10 (8580551000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of severe active anti-neutrophil cytoplasmic autoantibody (ANCA)-associated vasculitis (granulomatosis with polyangiitis [GPA] or microscopic polyangiitis [MPA]) (ICD-10 I77.82) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
Therapy is prescribed by or in consultation with a rheumatologist or nephrologist
The patient is ANCA seropositive (anti-PR3 or anti-MPO)
Tavneos will be used as adjunctive therapy in combination with standard therapy including glucocorticoids (e.g., methylprednisolone, prednisone)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #6 per day.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AVACOPAN (Tavneos)** requires the following rule(s) be met for approval:
You have severe active anti-neutrophil cytoplasmic autoantibody (ANCA)-associated vasculitis (inflammation of blood vessels) (granulomatosis with polyangiitis [GPA] or microscopic polyangiitis [MPA]: conditions that affect the blood vessels)
You are 18 years of age or older
Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or nephrologist (a type of kidney doctor)
You are ANCA seropositive for anti-PR3 or anti-MPO (a type of lab test)
Tavneos will be used as adjunctive (add-on) therapy in combination with standard therapy including glucocorticoids (such as methylprednisolone, prednisone)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

AVATROMBOPAG

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AVATROMBOPAG MALEATE	DOPTELET, DOPTELET SPRINKLE	44942		GPI-10 (8240501020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of thrombocytopenia in chronic liver disease and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- The patient is scheduled to undergo a procedure 10 to 13 days following the initiation of Doptelet therapy
- The patient has a platelet count of less than 50 x 10^9/L
- Doptelet will NOT be used concurrently with other thrombopoietin receptor agonists (TPO-RAs) (e.g., Nplate [romiplostim], Promacta [eltrombopag])

If yes, **approve by HICL or GPI-10 for 1 fill with a quantity limit of #15.**
If no, continue to #2.

Does the patient have a diagnosis of persistent or chronic immune thrombocytopenia (ITP) (ICD-10 D69.3) and meet **ALL** of the following criteria?
- The patient is 1 year of age or older
- The patient had a trial of or contraindication to ONE of the following clinical standard of care agents: a corticosteroid or IV immunoglobulin, OR had an insufficient response to a splenectomy
- The patient has a platelet count of less than 30 x 10^9/L, OR has a platelet count of less than 50 x 10^9/L and had a prior bleeding event
- The requested medication will NOT be used concurrently with other thrombopoietin receptor agonists (TPO-RAs) (e.g., Nplate [romiplostim], Promacta [eltrombopag], Alvaiz [eltrombopag])

If yes, **approve the requested strength for 2 months by GPID or GPI-14 with a quantity limit of #2 per day.**

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

AVATROMBOPAG

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AVATROMBOPAG (Doptelet, Doptelet Sprinkle)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Thrombocytopenia (a type of blood disorder) in chronic (long-term) liver disease
- Persistent or chronic immune thrombocytopenia (ITP: a type of blood disorder)

If you have thrombocytopenia in chronic liver disease, approval also requires:
- You are 18 years of age or older
- You are scheduled to undergo a procedure 10 to 13 days after starting Doptelet therapy
- You have a platelet (a type of blood cell) count of less than 50 x 10^9/L
- You will NOT use Doptelet concurrently (at the same time) with other thrombopoietin receptor agonists (TPO-RAs, such as Nplate [romiplostim], Promacta [eltrombopag])

If you have persistent or chronic immune thrombocytopenia, approval also requires:
- You are 1 year of age or older
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: a corticosteroid or intravenous (injection into the vein) immunoglobulin, OR you did not have a good enough response to a splenectomy (spleen removal)
- You have a platelet (a type of blood cell) count of less than 30 x 10^9/L, OR you have a platelet (a type of blood cell) count of less than 50 x 10^9/L and had a prior bleeding event
- You will NOT use the requested medication concurrently (at the same time) with other thrombopoietin receptor agonists (TPO-RAs, such as Nplate [romiplostim], Promacta [eltrombopag], Alvaiz [eltrombopag])

AVATROMBOPAG

RENEWAL CRITERIA

NOTE: For the diagnosis of thrombocytopenia in chronic liver disease, please refer to the Initial Criteria section.

Does the patient have a diagnosis of persistent or chronic immune thrombocytopenia (ITP) (ICD-10 D69.3) and meet **ALL** of the following criteria?
- The patient has shown a clinical response to therapy, defined as having an improvement in platelet count from baseline OR a reduction in bleeding events
- The requested medication will NOT be used concurrently with other thrombopoietin receptor agonists (TPO-RAs) (e.g., Nplate [romiplostim], Promacta [eltrombopag], Alvaiz [eltrombopag])

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AVATROMBOPAG (Doptelet, Doptelet Sprinkle)** requires the following rule(s) be met for renewal:
- You have persistent or chronic immune thrombocytopenia (ITP: a type of blood disorder)
- You have shown a clinical response to therapy, defined as having an improvement in platelet (a type of blood cell) count from baseline (before starting Doptelet) OR a decrease in bleeding events
- You will NOT use the requested medication concurrently (at the same time) with other thrombopoietin receptor agonists (TPO-RAs, such as Nplate [romiplostim], Promacta [eltrombopag], Alvaiz [eltrombopag])

RATIONALE

AVELUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AVELUMAB	BAVENCIO	44170		GPI-10 (2135822000)	

GUIDELINES FOR USE

Does the patient have a diagnosis of metastatic Merkel cell carcinoma (MCC) (ICD-10 C7B.1; Group C4A) **AND** meet the following criterion?
The patient is 12 years or older

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #80mL per 28 days.**

If no, continue to #2.

Does the patient have a diagnosis of locally advanced or metastatic urothelial carcinoma (UC) (ICD- 10 Groups C65, C66, C67, C68) and meet **ONE** of the following criteria?
The patient has disease progression during or following platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)
The patient has disease progression within 12 months of neoadjuvant or adjuvant treatment with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)
The patient does not have disease progression with first-line platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin), AND Bavencio will be used as first-line maintenance treatment

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #80mL per 28 days.**

If no, continue to #3.

Does the patient have a diagnosis of advanced renal cell carcinoma (RCC) (ICD-10 Groups C64, C65) **AND** meet the following criterion?
Bavencio will be used in combination with Inlyta (axitinib)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #80mL per 28 days.**

If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

AVELUMAB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it

Our guideline named **AVELUMAB (Bavencio)** requires the following rules be met for approval:
You have ONE of the following:
- Metastatic Merkel cell carcinoma (MCC: a type of skin cancer)
- Locally advanced or metastatic (disease that has spread) urothelial carcinoma (UC: type of urinary system cancer)
- Advanced renal cell carcinoma (RCC: a type of kidney cancer)

If you have metastatic Merkel Cell Carcinoma, approval also requires:
- You are 12 years of age or older

If you have locally advanced or metastatic urothelial carcinoma, approval also requires ONE of the following:
- Your disease has worsened during or after platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin)
- Your disease has worsened within 12 months of neoadjuvant (treatment given before a main treatment) or adjuvant treatment (add-on to a main treatment) with platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin)
- Your disease has not worsened with first-line platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin), AND Bavencio will be used as first-line maintenance treatment

If you have advanced renal cell carcinoma, approval also requires:
- Bavencio will be used in combination with Inlyta (axitinib)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE
For further information, please refer to the Prescribing Information and/or Drug Monograph for Bavencio.

AZELAIC ACID

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
AZELAIC ACID	AZELEX	07471		GPI-10 (9005000510)	FDB: BRAND = AZELEX

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of acne vulgaris (ICD-10 L70.0) and meet **ALL** of the following criteria?
Azelex will NOT be used concurrently with other single source brand acne agents (e.g., Aklief, Cabtreo, Winlevi)
The patient had a trial of or contraindication to THREE preferred generic topical agents for the treatment of acne (e.g., azelaic acid 15% gel, benzoyl peroxide, topical clindamycin)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **AZELAIC ACID (Azelex)** requires the following rule(s) be met for approval:
You have acne vulgaris (a type of skin condition)
Azelex will NOT be used concurrently (at the same time) with other acne therapies that are only available as brand name (such as Aklief, Cabtreo, Winlevi)
You have tried or have a contraindication to (harmful for you to use) THREE preferred generic topical medications for the treatment of acne (such as azelaic acid 15% gel, benzoyl peroxide, topical clindamycin)

BARICITINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BARICITINIB	OLUMIANT	44296		GPI-10 (6660301000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Olumiant will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
- The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**Note:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 per day.**
  If no, continue to #2.

Is the request for the treatment of coronavirus disease 2019 (COVID-19) in a hospitalized adult?

If yes, **do not approve**. [**NOTE:** This indication is for hospital use only.]
DENIAL TEXT: See initial denial text at the end of the guideline.

If no, continue to #3.

BARICITINIB

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of severe alopecia areata (ICD-10 Group L63) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- The patient has had at least 50% scalp hair loss, as measured by the Severity of Alopecia Tool (SALT), for more than 6 months
- Olumiant will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor [e.g., Litfulo (ritlecitinib)], PDE-4 inhibitor) for the treatment of alopecia areata

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BARICITINIB (Olumiant)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Severe alopecia areata (a type of hair loss)

(Initial denial text continued on next page)

CONTINUED ON NEXT PAGE

BARICITINIB

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe rheumatoid arthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Olumiant concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor (TNF) blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

If you have severe alopecia areata, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You have had at least 50 percent scalp hair loss, as measured by the Severity of Alopecia Tool (SALT: a type of disease evaluation tool), for more than 6 months
- You will NOT use Olumiant concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Litfulo (ritlecitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of alopecia areata (a type of hair loss)

NOTE: Olumiant will not be approved for the treatment of coronavirus disease 2019 (COVID-19) in hospitalized adults.

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

BARICITINIB

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Olumiant will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**Note:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
  If no, continue to #2.

Does the patient have a diagnosis of severe alopecia areata (ICD-10 Group L63) and meet **ALL** of the following criteria?
- The patient has had improvement while on therapy (e.g., scalp hair coverage)
- Olumiant will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor [e.g., Litfulo (ritlecitinib)], PDE-4 inhibitor) for the treatment of alopecia areata

  If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
  If no, do not approve.
  DENIAL TEXT: See the renewal denial text at the end of the guideline.

BARICITINIB

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BARICITINIB (Olumiant)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Severe alopecia areata (a type of hair loss)

If you have moderate to severe rheumatoid arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Olumiant concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor (TNF) blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

If you have severe alopecia areata, renewal also requires:
- You have experienced improvement while on therapy (such as scalp hair coverage)
- You will NOT use Olumiant concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Litfulo (ritlecitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of alopecia areata (a type of hair loss)

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

BAXDROSTAT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BAXDROSTAT	BAXFENDY	51327		GPI-10 (3613002000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of hypertension (ICD-10 I10) and meet **ALL** of the following criteria?

The patient is 18 years of age or older

Therapy is prescribed by or in consultation with a cardiologist, nephrologist, or endocrinologist

The patient's blood pressure is NOT controlled on at least three anti-hypertensive agents of different pharmacologic classes (e.g., an angiotensin receptor blocker [e.g., valsartan], a calcium channel blocker [e.g., amlodipine]), with at least one being a diuretic (e.g., hydrochlorothiazide), at maximally tolerated doses for at least 4 weeks

The patient does NOT have resistant hypertension due to white coat effect, medical inertia, poor therapeutic adherence, or secondary causes of hypertension (except primary aldosteronism and sleep apnea)

The patient had a trial of or contraindication to ONE of the following clinical standard of care agents: spironolactone, eplerenone

If yes, **approve for 6 months by HICL or GPI-10.**
If no, do not approve.

INITIAL DENIAL TEXT: Our guideline named **BAXDROSTAT (Baxfendy)** requires the following rule(s) be met for approval:

You have hypertension (high blood pressure)

You are 18 years of age or older

Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor), nephrologist (a type of kidney doctor), or endocrinologist (a type of hormone doctor)

Your blood pressure is NOT controlled on at least three anti-hypertensive medications (medications used to treat high blood pressure) with different mechanisms of action (such as an angiotensin receptor blocker [such as valsartan], a calcium channel blocker [such as amlodipine]), with at least one being a diuretic (such as hydrochlorothiazide), at maximally tolerated doses for at least 4 weeks

You do NOT have resistant hypertension (a type of high blood pressure) due to white coat effect (a condition where blood pressure is higher in a medical setting), medical inertia (when healthcare providers do not make changes to treatment even if the medical condition is poorly controlled), poor therapeutic adherence (not keeping up with therapy), or secondary causes of hypertension (except primary aldosteronism [a type of hormone disorder] and sleep apnea [a type of sleep condition with difficulty breathing])

You have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medications: spironolactone, eplerenone

BAXDROSTAT

RENEWAL CRITERIA

Does the patient have a diagnosis of hypertension (ICD-10 I10) **AND** meet the following criterion?
The patient has had blood pressure reduction or achieved blood pressure goal

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: Our guideline named **BAXDROSTAT (Baxfendy)** requires the following rule(s) be met for renewal:
You have hypertension (high blood pressure)
You have had blood pressure reduction (decrease) or achieved blood pressure goal

RATIONALE

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BEDAQUILINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BEDAQUILINE FUMARATE	SIRTURO	39895		GPI-10 (0900001510)	

GUIDELINES FOR USE

Does the patient have a diagnosis of pulmonary tuberculosis (TB) (ICD-10 Group A15)?

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient have an isolate of *Mycobacterium tuberculosis* that is resistant to rifampin and isoniazid?

If yes, continue to #3.
If no, continue to #5.

Is the patient 2 years of age or older **AND** meets the following criterion?
Sirturo will be used in combination with at least 3 other antibiotics

If yes, **approve for a total of 24 weeks by GPID or GPI-14 as follows:**
FIRST APPROVAL: Approve the requested strength for 4 weeks as follows:
20mg: #340 per 28 days.
100mg: #68 per 28 days.
SECOND APPROVAL: Approve the requested strength for 20 weeks (total fill count 5) as follows (please enter a start date of 3 WEEKS AFTER the START date of the first approval):
20mg: #120 per 28 days.
100mg: #24 per 28 days.

If no, continue to #4.

Is the patient 18 years of age or older **AND** meets the following criterion?
Sirturo will be used in combination with pretomanid and linezolid

If yes, **approve the 100mg strength for a total of 26 weeks by GPID or GPI-14 as follows:**
FIRST APPROVAL: Approve for 4 weeks with a quantity limit of #68 per 28 days.
SECOND APPROVAL: Approve for 22 weeks (total fill count 6) with a quantity limit of #24 per 28 days. (Please enter a start date of 3 WEEKS AFTER the START date of the first approval.)

If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

BEDAQUILINE

GUIDELINES FOR USE (CONTINUED)

Does the patient have an isolate of *Mycobacterium tuberculosis* that is resistant to isoniazid, rifampin, a fluoroquinolone, and an aminoglycoside?

If yes, continue to #6.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient meet **ALL** of the following criteria?
The patient is 18 years of age or older
Sirturo will be used in combination with pretomanid and linezolid

If yes, **approve the 100mg strength for a total of 26 weeks by GPID or GPI-14 as follows:**
FIRST APPROVAL: Approve for 4 weeks with a quantity limit of #68 per 28 days.
SECOND APPROVAL: Approve for 22 weeks (total fill count 6) with a quantity limit of #24 per 28 days. (Please enter a start date of 3 WEEKS AFTER the START date of the first approval.)

If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEDAQUILINE (Sirturo)** requires the following rule(s) be met for approval:
You have pulmonary tuberculosis (TB: a type of lung infection)
You meet ONE of the following:
- You have an isolate of *Mycobacterium tuberculosis* (a type of bacterium) that is resistant to rifampin and isoniazid; you are 2 years of age or older; and you will use Sirturo in combination with at least 3 other antibiotics
- You have an isolate of *Mycobacterium tuberculosis* that is resistant to rifampin and isoniazid; you are 18 years of age or older; and you will use Sirturo in combination with pretomanid and linezolid
- You have an isolate of *Mycobacterium tuberculosis* that is resistant to isoniazid, rifampin, a fluoroquinolone, and an aminoglycoside antibiotic; you are 18 years of age or older; and you will use Sirturo in combination with pretomanid and linezolid

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

The patient is 18 years of age or older
Blenrep will be used in combination with bortezomib and dexamethasone
The patient has received at least two prior lines of therapy, including a proteasome inhibitor (e.g., Ninlaro [ixazomib], Kyprolis [carfilzomib]) and an immunomodulatory agent (e.g., Revlimid [lenalidomide], Pomalyst [pomalidomide])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BELANTAMAB MAFODOTIN-BLMF (Blenrep)** requires the following rule(s) be met for approval:
You have relapsed or refractory multiple myeloma (a type of blood cancer that has returned or did not respond to treatment)
You are 18 years of age or older
Blenrep will be used in combination with bortezomib and dexamethasone
You have received at least two prior lines of therapy, including a proteasome inhibitor (such as Ninlaro [ixazomib], Kyprolis [carfilzomib]) and an immunomodulatory agent (such as Revlimid [lenalidomide], Pomalyst [pomalidomide])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Blenrep.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BELIMUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BELIMUMAB	BENLYSTA	37462		GPI-10 (9942201500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of systemic lupus erythematosus (SLE) (ICD-10 Group M32) and meet **ALL** of the following criteria?
The patient is 5 years of age or older
Therapy is prescribed by or in consultation with a rheumatologist
The patient is currently using corticosteroids, antimalarials, NSAIDs, or immunosuppressives
Benlysta will NOT be used concurrently with another systemic biologic (e.g., Saphnelo [anifrolumab-fnia]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of SLE

If yes, **approve the requested strength for 6 months by GPID or GPI-14 as follows:**
200mg/mL (all formulations): #4mL per 28 days.
120mg, 400mg: no quantity limit.

If no, continue to #2.

Does the patient have a diagnosis of lupus nephritis (ICD-10 M32.14) and meet **ALL** of the following criteria?
The patient is 5 years of age or older
Therapy is prescribed by or in consultation with a rheumatologist or nephrologist
The patient is receiving standard therapy (e.g., steroids, antimalarials, NSAIDs, immunosuppressives)
Benlysta will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of lupus nephritis

If yes, **approve the requested strength for a total of 6 months by GPID or GPI-14 as follows:**
120mg, 400mg: Approve for 6 months by GPID or GPI-14 with no quantity limit.
200mg/mL (all formulations):
<u>FIRST APPROVAL</u>: Approve for 1 month with a quantity limit of #8mL per 28 days.
<u>SECOND APPROVAL</u>: Approve for 5 months with a quantity limit of #4mL per 28 days (Please enter a start date 3 weeks after the start date of the first approval).

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BELIMUMAB

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BELIMUMAB (Benlysta)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Systemic lupus erythematosus (SLE: a type of immune condition)
- Lupus nephritis (LN: a type of immune condition that affects the kidneys)

If you have systemic lupus erythematosus, approval also requires:
- You are 5 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You are currently using corticosteroids, antimalarials, non-steroidal anti-inflammatory drugs (NSAIDS), or immunosuppressives (standard therapy for the treatment of systemic lupus erythematosus [SLE])
- You will NOT use Benlysta concurrently (at the same time) with another systemic biologic (such as Sahnelo [anifrolumab-fnia]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of SLE

If you have lupus nephritis, approval also requires:
- You are 5 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or nephrologist (a type of kidney doctor)
- You are receiving standard treatment (such as steroids, antimalarials, nonsteroidal anti-inflammatory drugs [NSAIDs], or immunosuppressives
- You will NOT use Benlysta concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of lupus nephritis

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BELIMUMAB

RENEWAL CRITERIA

Does the patient have a diagnosis of systemic lupus erythematosus (SLE) (ICD-10 Group M32) and meet **ALL** of the following criteria?
- The patient has shown clinical improvement while on Benlysta
- Benlysta will NOT be used concurrently with another systemic biologic (e.g., Saphnelo [anifrolumab-fnia]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of SLE

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
200mg/mL (all formulations): #4mL per 28 days.
120mg, 400mg: no quantity limit.

If no, continue to #2.

Does the patient have a diagnosis of lupus nephritis (ICD-10 M32.14) and meet **ALL** of the following criteria?
- The patient has shown clinical improvement in renal response as compared to baseline laboratory values (i.e., eGFR or proteinuria) and/or clinical parameters (e.g., fluid retention, use of rescue drugs, glucocorticoid dose)
- Benlysta will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of lupus nephritis

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
200mg/mL (all formulations): #4mL per 28 days.
120mg, 400mg: no quantity limit.

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

BELIMUMAB

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BELIMUMAB (Benlysta)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Systemic lupus erythematosus (SLE: a type of immune condition)
- Lupus nephritis (LN: a type of immune condition that affects the kidneys)

If you have systemic lupus erythematosus, renewal also requires:
- You have shown clinical improvement while on Benlysta
- You will NOT use Benlysta concurrently (at the same time) with another systemic biologic (such as Sahnelo [anifrolumab-fnia]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of systemic lupus erythematosus

If you have lupus nephritis, renewal also requires:
- You have shown clinical improvement in renal (kidney) response as compared to baseline (before starting Benlysta) laboratory values (estimated glomerular filtration rate [eGFR: a tool for evaluating kidney function] or proteinuria [level of protein in the urine]), and/or clinical parameters (such as fluid retention, use of rescue drugs, glucocorticoid dose)
- You will NOT use Benlysta concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of lupus nephritis

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Benlysta.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BELUMOSUDIL

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BELUMOSUDIL MESYLATE	REZUROCK	47503		GPI-10 (9939851050)	

GUIDELINES FOR USE

Does the patient have a diagnosis of chronic graft-versus-host-disease (cGVHD) (ICD-10 D89.811, D89.812) and meet **ALL** of the following criteria?
- The patient is 12 years of age or older
- The patient has failed at least TWO lines of systemic therapy (e.g., prednisone, methotrexate, mycophenolate mofetil), one of which must be a trial of or contraindication to Jakafi (ruxolitinib)
- Rezurock will NOT be used concurrently with Jakafi (ruxolitinib), Niktimvo (axatilimab-csfr), or Imbruvica (ibrutinib)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BELUMOSUDIL (Rezurock)** requires the following rule(s) be met for approval:
- You have chronic graft-versus-host-disease (cGVHD: a type of long-term immune disorder)
- You are 12 years of age or older
- You have failed at least TWO lines of systemic therapy (treatment that targets the entire body, such as prednisone, methotrexate, mycophenolate mofetil), one of which must be a trial of or contraindication to (harmful for you to use) Jakafi (ruxolitinib)
- You will NOT use Rezurock concurrently (at the same time) with Jakafi (ruxolitinib), Niktimvo (axatilimab-csfr), or Imbruvica (ibrutinib)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

BELZUTIFAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BELZUTIFAN	WELIREG	47546		GPI-10 (2142102000)	

GUIDELINES FOR USE

Does the patient have a diagnosis of von Hippel-Lindau (VHL) disease (ICD-10 Q85.83) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- The patient requires therapy for associated renal cell carcinoma (RCC), central nervous system (CNS) hemangioblastomas, or pancreatic neuroendocrine tumors (pNET)
- The patient does NOT require immediate surgery

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #3 per day.**
If no, continue to #2.

Does the patient have a diagnosis of renal cell carcinoma (RCC) (ICD-10 Groups C64, C65) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Welireg will be used for adjuvant treatment
- Welireg will be used in combination with Keytruda (pembrolizumab) or Keytruda Qlex (pembrolizumab and berahyaluronidase alfa-pmph)
- The patient has renal cell carcinoma with a clear cell component (ccRCC)
- The patient is at intermediate-high or high risk of recurrence following a nephrectomy, or following a nephrectomy and resection of metastatic lesions

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #3 per day.**
If no, continue to #3.

Does the patient have a diagnosis of advanced renal cell carcinoma (RCC) (ICD-10 Groups C64, C65) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- The patient has renal cell carcinoma with a clear cell component (ccRCC)
- The patient was previously treated with a programmed death receptor-1 (PD-1) inhibitor (e.g., Keytruda [pembrolizumab]) OR a programmed death-ligand 1 (PD-L1) inhibitor (e.g., Bavencio [avelumab])
- The patient was previously treated with a vascular endothelial growth factor tyrosine kinase inhibitor (VEGF-TKI) (e.g., Nexavar [sorafenib])

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #3 per day.**
If no, continue to #4.

BELZUTIFAN

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of pheochromocytoma (ICD-10 Groups D35.0, C74.1) or paraganglioma (PPGL) (ICD-10 D44.7, C75.5) and meet **ALL** of the following criteria?
The patient is 12 years of age or older
The patient's tumor is locally advanced, unresectable, or metastatic

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #3 per day.**
If no, do not approve.

DENIAL TEXT: Our guideline named **BELZUTIFAN (Welireg)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Von Hippel-Lindau (VHL) disease (a genetic disorder that causes tumors to grow in the body)
- Renal cell carcinoma (RCC: a type of kidney cancer)
- pheochromocytoma (a type of rare tumor) or paraganglioma (a type of nerve condition)

If you have von Hippel-Lindau disease, approval also requires:
- You are 18 years of age or older
- You require therapy for associated renal cell carcinoma (RCC: a type of kidney cancer), central nervous system (CNS) hemangioblastomas (tumor in the brain or spinal cord), or pancreatic neuroendocrine tumors (pNET: tumor in the pancreas)
- You do NOT require immediate surgery

If you have renal cell carcinoma, approval also requires ONE of the following:
- You are 18 years of age or older; AND Welireg will be used in combination with Keytruda (pembrolizumab) or Keytruda Qlex (pembrolizumab and berahyaluronidase alfa-pmph); AND Welireg will be used for adjuvant (add-on) treatment; AND you have renal cell carcinoma with a clear cell component (ccRCC: a type of kidney cancer); AND your cancer is at intermediate-high or high risk of recurrence (returning) following a nephrectomy (surgical removal of the kidney), or following a nephrectomy and resection (surgical removal) of metastatic lesions (abnormal area of tissue)
- You are 18 years of age or older; AND your cancer is advanced; AND you have renal cell carcinoma with a clear cell component (ccRCC: a type of kidney cancer); AND you were previously treated with a programmed death receptor-1 (PD-1) inhibitor (such as Keytruda [pembrolizumab]) OR a programmed death-ligand 1 (PD-L1) inhibitor (such as Bavencio [avelumab]); AND you were previously treated with a vascular endothelial growth factor tyrosine kinase inhibitor (VEGF-TKI) (such as Nexavar [sorafenib])

If you have pheochromocytoma or paraganglioma, approval also requires:
- You are 12 years of age or older
- Your tumor is locally advanced (spread from where it started to nearby tissue or lymph nodes), unresectable (cannot be removed by surgery), or metastatic (has spread to other parts of the body)

STANDARD COMMERCIAL AND NSA DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BENRALIZUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BENRALIZUMAB	FASENRA	44635		GPI-10 (4460402000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of severe asthma with an eosinophilic phenotype (ICD-10 J82.83) and meet **ALL** of the following criteria?
- The patient is 6 years of age or older
- Therapy is prescribed by or in consultation with a physician specializing in pulmonary or allergy medicine
- The patient has a blood eosinophil level of at least 150 cells/mcL within the past 12 months
- Fasenra will be used in combination with a medium, high-dose, or maximally tolerated dose of an inhaled corticosteroid (ICS) (e.g., beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (e.g., a long-acting inhaled beta2-agonist [e.g., formoterol, salmeterol], a long-acting muscarinic antagonist [e.g., Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [e.g., montelukast, zafirlukast], theophylline, or an oral corticosteroid [e.g., prednisone])
- Fasenra will NOT be used concurrently with another systemic biologic (e.g., Dupixent [dupilumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of eosinophilic phenotype asthma

If yes, continue to #2.
If no, continue to #4.

Does the patient meet **ONE** of the following criteria?
- The patient has experienced at least ONE asthma exacerbation requiring systemic corticosteroid burst lasting at least 3 days within the past 12 months
- The patient has experienced at least ONE serious asthma exacerbation requiring hospitalization or an emergency room visit within the past 12 months

If yes, **approve all strengths and formulations for a total of 4 months by GPID or GPI-14. Please enter two authorizations as follows:**
FIRST APPROVAL: Approve for 2 months with the following quantity limits:
10mg/0.5mL: #0.5mL per 28 days.
30mg/mL: #1mL per 28 days.
SECOND APPROVAL: Approve for 2 months with the following quantity limits (please enter a start date of 1 week before the end date of the first approval):
10mg/0.5mL: #0.5mL per 56 days.
30mg/mL: #1mL per 56 days.

If no, continue to #3.

CONTINUED ON NEXT PAGE

Copyright © 2026 MedImpact Healthcare Systems, Inc. All rights reserved. This document is proprietary to MedImpact. MedImpact maintains the sole and exclusive ownership, right, title, and interest in and to this document.

INITIAL CRITERIA (CONTINUED)

Does the patient have poor symptom control despite current therapy as evidenced by at least **THREE** of the following within the past 4 weeks?
- Daytime asthma symptoms more than twice per week
- Any night waking due to asthma
- Use of a short-acting inhaled beta2-agonist (SABA) reliever (e.g., albuterol) for symptoms more than twice per week
- Any activity limitation due to asthma

If yes, **approve all strengths and formulations for a total of 4 months by GPID or GPI-14. Please enter two authorizations as follows:**
FIRST APPROVAL: Approve for 2 months with the following quantity limits:
10mg/0.5mL: #0.5mL per 28 days.
30mg/mL: #1mL per 28 days.
SECOND APPROVAL: Approve for 2 months with the following quantity limits (please enter a start date of 1 week before the end date of the first approval):
10mg/0.5mL: #0.5mL per 56 days.
30mg/mL: #1mL per 56 days.

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of eosinophilic granulomatosis with polyangiitis (EGPA) (ICD-10 M30.1), also known as Churg-Strauss syndrome, and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Fasenra will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of EGPA

If yes, **approve all formulations of the 30mg/mL strength for 12 months by GPID or GPI-14 with a quantity limit of #1mL per 28 days.**

If no, continue to #5.

BENRALIZUMAB

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of hypereosinophilic syndrome (HES) (ICD-10 Group D72.11) and meet **ALL** of the following criteria?
- The patient is 12 years of age or older
- The patient has HES without an identifiable non-hematologic secondary cause
- Therapy is prescribed by or in consultation with an allergist, immunologist, hematologist, or pulmonologist
- The patient has a blood eosinophil count of at least 1000 cell/mcL at initiation of therapy
- The patient has a negative FIP1L1-PDGFRA test
- The patient has been stable on HES therapy (corticosteroid [e.g., prednisone]) for at least 4 weeks
- Fasenra will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HES

If yes, **approve all formulations of the 30mg strength for 6 months by GPID or GPI-14 with a quantity limit of #1mL per 28 days.**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BENRALIZUMAB (Fasenra)** requires the following rule(s) be met for approval:

You have ONE of the following:
- Severe asthma with an eosinophilic phenotype (a type of lung condition with inflammation)
- Eosinophilic granulomatosis with polyangiitis (EGPA), also known as Churg-Strauss syndrome (a type of immune system disorder with inflammation of blood vessels)
- Hypereosinophilic syndrome (HES: a type of blood disorder)

(Initial denial text continued on next page)

CONTINUED ON NEXT PAGE

BENRALIZUMAB

INITIAL CRITERIA (CONTINUED)

If you have severe asthma with an eosinophilic phenotype, approval also requires:
- You are 6 years of age or older
- Therapy is prescribed by or in consultation with a physician specializing in pulmonary (relating to lungs/breathing) medicine or allergy medicine
- You have a blood eosinophil level (a type of lab test) of at least 150 cells/mcL within the past 12 months
- Fasenra will be used in combination with a medium, high-dose, or maximally tolerated dose of an inhaled corticosteroid (such as beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (taken on a regular basis) (such as a long-acting inhaled beta2-agonist [such as formoterol, salmeterol], a long-acting muscarinic antagonist [such as Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [such as montelukast, zafirlukast], theophylline, or an oral corticosteroid [such as prednisone])
- You will NOT use Fasenra concurrently (at the same time) with another systemic biologic (such as Dupixent [dupilumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic phenotype asthma (a type of lung condition with inflammation)
- You meet ONE of the following:
  - You have experienced at least ONE asthma exacerbation (worsening of symptoms) requiring systemic corticosteroid (such as prednisone) burst lasting at least 3 days within the past 12 months
  - You have experienced at least ONE serious asthma exacerbation requiring a hospitalization or an emergency room visit within the past 12 months
  - You have poor symptom control despite current therapy as shown by at least THREE of the following within the past 4 weeks:
    - Daytime asthma symptoms more than twice per week
    - Any night waking due to asthma
    - Use of a short-acting inhaled beta2-agonist reliever (such as albuterol) for symptoms more than twice per week
    - Any activity limitation due to asthma

If you have eosinophilic granulomatosis with polyangiitis, approval also requires:
- You are 18 years of age or older
- You will NOT use Fasenra concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic granulomatosis with polyangiitis (a type of immune system disorder with inflammation of blood vessels)

(Initial denial text continued on next page)

BENRALIZUMAB

INITIAL CRITERIA (CONTINUED)

If you have hypereosinophilic syndrome, approval also requires:

- You are 12 years of age or older
- You have hypereosinophilic syndrome (HES: a type of blood disorder) without an identifiable non-hematologic (not present in the blood) secondary cause (HES is not caused by another condition)
- Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), immunologist (a type of immune system doctor), hematologist (a type of blood doctor), or pulmonologist (lung/breathing doctor)
- You have a blood eosinophil count (a type of lab test) of at least 1000 cells/mcL at the start of therapy
- You have a negative FIP1L1-PDFRA test (a type of lab test that detects a type of gene mutation)
- You have been stable on hypereosinophilic syndrome (HES: a type of blood disorder) therapy (corticosteroid [such as prednisone]) for at least 4 weeks
- You will NOT use Fasenra concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK inhibitor, PDE-4 inhibitor) for the treatment of hypereosinophilic syndrome (a type of blood disorder)

BENRALIZUMAB

RENEWAL CRITERIA

Does the patient have a diagnosis of severe asthma with an eosinophilic phenotype (ICD-10 J82.83) and meet **ALL** of the following criteria?
- The patient will continue to use an inhaled corticosteroid (ICS) (e.g., beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (e.g., a long-acting inhaled beta2-agonist [e.g., formoterol, salmeterol], a long-acting muscarinic antagonist [e.g., Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [e.g., montelukast, zafirlukast], theophylline, or an oral corticosteroid [e.g., prednisone])
- Fasenra will NOT be used concurrently with another systemic biologic (e.g., Dupixent [dupilumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of eosinophilic phenotype asthma

If yes, continue to #2.
If no, continue to #3.

Has the patient shown a clinical response as evidenced by **ONE** of the following criteria?
- Reduction in asthma exacerbations from baseline
- Decreased utilization of rescue medications (e.g., albuterol)
- Increase in percent predicted FEV1 from pre-treatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing)

If yes, **approve all strengths and formulations for 12 months by GPID or GPI-14 with the following quantity limits:**
10mg/0.5mL: #0.5mL per 56 days.
30mg/mL: #1mL per 56 days.

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient have a diagnosis of eosinophilic granulomatosis with polyangiitis (EGPA) (ICD-10 M30.1), also known as Churg-Strauss syndrome, and meet **ALL** of the following criteria?
- The patient has a reduction in EGPA symptoms compared to baseline OR has been able to reduce/eliminate corticosteroid (e.g., prednisone) use
- Fasenra will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of EGPA

If yes, **approve all formulations of the 30mg/mL strength for 12 months by GPID or GPI-14 with a quantity limit of #1mL per 28 days.**

If no, continue to #4.

BENRALIZUMAB

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of hypereosinophilic syndrome (HES) (ICD-10 Group D72.11) and meet **ALL** of the following criteria?
- The patient has a reduction in frequency/severity of HES flares
- The patient has improved symptoms or reduced oral steroid (e.g., prednisone) requirements
- Fasenra will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HES

If yes, **approve all formulations of the 30mg strength for 12 months by GPID or GPI-14 with a quantity limit of #1mL per 28 days.**

If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BENRALIZUMAB (Fasenra)** requires the following rule(s) be met for renewal:

You have ONE of the following:
- Severe asthma with an eosinophilic phenotype (a type of lung condition with inflammation)
- Eosinophilic granulomatosis with polyangiitis (EGPA), also known as Churg-Strauss syndrome (a type of immune system disorder with inflammation of blood vessels)
- Hypereosinophilic syndrome (HES: a type of blood disorder)

If you have severe asthma with an eosinophilic phenotype, renewal also requires:
- You will continue to use an inhaled corticosteroid (such as beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (taken on a regular basis), such as a long-acting inhaled beta2-agonist (such as formoterol, salmeterol), a long-acting muscarinic antagonist (such as Tudorza [aclidinium], Spiriva [tiotropium], Incruse Ellipta [umeclidinium]), a leukotriene receptor antagonist (such as montelukast, zafirlukast), theophylline, or an oral corticosteroid (such as prednisone)
- You will NOT use Fasenra concurrently (at the same time) with another systemic biologic (such as Dupixent [dupilumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic phenotype asthma (a type of lung condition with inflammation)

(Renewal denial text continued on next page)

BENRALIZUMAB

RENEWAL CRITERIA (CONTINUED)

You have shown a clinical response as evidenced by ONE of the following:
- You have experienced a decrease in asthma exacerbations (worsening of symptoms) from baseline (before starting Fasenra)
- You have decreased your use of rescue medications (such as albuterol)
- Your percent predicted FEV1 (a type of lung test) has increased from pre-treatment baseline (before starting Fasenra)
- You have experienced a decrease in the severity or frequency of asthma-related symptoms (such as wheezing, shortness of breath, coughing)

If you have eosinophilic granulomatosis with polyangiitis, renewal also requires:
- You have a reduction in eosinophilic granulomatosis with polyangiitis (a type of immune system disorder with inflammation of blood vessels) symptoms compared to baseline (before starting Fasenra), OR you have been able to decrease or eliminate (stop) corticosteroid (such as prednisone) use
- You will NOT use Fasenra concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of EGPA (a type of immune system disorder with inflammation of blood vessels)

If you have hypereosinophilic syndrome, renewal also requires:
- You have a reduction in frequency/severity of hypereosinophilic syndrome (HES: a type of blood disorder) flares
- You have improved symptoms or reduced oral steroid (such as prednisone) requirements
- You will NOT use Fasenra concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK inhibitor, PDE-4 inhibitor) for the treatment of hypereosinophilic syndrome (a type of blood disorder)

RATIONALE

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BERDAZIMER

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BERDAZIMER SODIUM	ZELSUVMI	49364		GPI-10 (9035001450)	

GUIDELINES FOR USE

Does the patient have a diagnosis of molluscum contagiosum (MC) (ICD-10 B08.1) and meet **ALL** of the following criteria?
The patient is 1 year of age or older
Zelsuvmi will NOT be used concurrently with another topical agent for the treatment of molluscum contagiosum (e.g., Ycanth [cantharidin], Condylox [podofilox])
The patient had a trial of or contraindication to the clinical standard of care agent: podofilox 0.5% topical solution

If yes, **approve for 12 weeks by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BERDAZIMER (Zelsuvmi)** requires the following rule(s) be met for approval:
You have molluscum contagiosum (MC: a viral skin infection)
You are 1 year of age or older
You will NOT use Zelsuvmi concurrently (at the same time) with another topical medication for the treatment of molluscum contagiosum (a viral skin infection) (such as Ycanth [cantharidin], Condylox [podofilox])
You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: podofilox 0.5% topical solution

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Zelsuvmi.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BEROTRALSTAT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BEROTRALSTAT HYDROCHLORIDE	ORLADEYO	47016		GPI-10 (8584001020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Orladeyo will be used for prophylaxis against HAE attacks
- Therapy is prescribed by or in consultation with an allergist, immunologist, hematologist, or pulmonologist
- Orladeyo will NOT be used concurrently with an alternative prophylactic agent for HAE attacks (e.g., Takhzyro [lanadelumab-flyo], Cinryze [C1 esterase inhibitor], Haegarda [C1 esterase inhibitor], danazol, Andembry [garadacimab-gxii], Dawnzera [donidalorsen])

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have Type I or II HAE **AND** meet the following criterion?
- The diagnosis is confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, continue to #3.

Does the patient have HAE-nC1INH (Type III HAE) as confirmed by **ALL** of the following criteria?
- The patient has recurrent, non-urticarial angioedema involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated HAE AND the attacks cannot be explained by histaminergic/urticarial angioedema
- Other causes of angioedema have been excluded, including ACE-inhibitor/ARB-associated angioedema, acquired C1-INH deficiency, and mast-cell/histaminergic angioedema

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BEROTRALSTAT

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEROTRALSTAT (Orladeyo)** requires the following rule(s) be met for approval:

- You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
- You are 2 years of age or older
- Orladeyo will be used for the prevention of hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks
- Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), immunologist (a type of immune system doctor), hematologist (a type of blood doctor), or pulmonologist (lung/breathing doctor)
- You will NOT use Orladeyo concurrently (at the same time) with an alternative preventive medication for hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Takhzyro [lanadelumab-flyo], Cinryze [C1 esterase inhibitor], Haegarda [C1 esterase inhibitor], danazol, Andembry [garadacimab-gxii], Dawnzera [donidalorsen])
- You meet ONE of the following:
  - You have Type I or II hereditary angioedema (a type of gene condition with severe body swelling), as confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q (types of lab tests)
  - You have HAE-nC1INH (hereditary angioedema with normal C1 inhibitor) (Type III hereditary angioedema) (a type of gene condition with severe body swelling) as confirmed by ALL of the following:
    - You have recurrent (condition continues to return), non-urticarial angioedema (a type of swelling without hives) involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated hereditary angioedema (a type of gene condition with severe body swelling) AND the attacks cannot be explained by histaminergic/urticarial angioedema (a type of swelling due to an allergic reaction)
    - Other causes of angioedema (a type of swelling) have been ruled out, including angiotensin-converting enzyme (ACE)-inhibitor/angiotensin receptor blocker (ARB)-associated angioedema (a type of swelling due to types of medications), acquired C1-INH deficiency (a type of condition that causes swelling), and mast-cell/histaminergic angioedema (a type of swelling due to an allergic reaction)

BEROTRALSTAT

RENEWAL CRITERIA

Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
- The patient has experienced an improvement in HAE attacks (reductions in attack frequency or attack severity) compared to baseline
- Orladeyo will NOT be used concurrently with an alternative prophylactic agent for HAE attacks (e.g., Takhzyro [lanadelumab-flyo], Cinryze [C1 esterase inhibitor], Haegarda [C1 esterase inhibitor], danazol, Andembry [garadacimab-gxii], Dawnzera [donidalorsen])

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEROTRALSTAT (Orladeyo)** requires the following rule(s) be met for renewal:
- You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
- You have experienced an improvement in hereditary angioedema (a type of gene condition with severe body swelling) attacks (reductions in attack frequency or attack severity) compared to baseline (before treatment)
- You will NOT use Orladeyo concurrently (at the same time) with an alternative preventive medication for hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Takhzyro [lanadelumab-flyo], Cinryze [C1 esterase inhibitor], Haegarda [C1 esterase inhibitor], danazol, Andembry [garadacimab-gxii], Dawnzera [donidalorsen])

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BEVACIZUMAB (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BEVACIZUMAB	AVASTIN, BEVACIZUMAB	25963		GPI-10 (2133502000, 8665502000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of metastatic colorectal cancer (mCRC) **AND** meet the following criterion?
- The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

  If yes, continue to #2.
  If no, continue to #6.

Does the patient meet **ONE** of the following criteria?
- Avastin will be used in combination with intravenous 5-fluorouracil based chemotherapy for first or second-line treatment
- Avastin will be used in combination with fluoropyrimidine- irinotecan- (i.e., FOLFIRI) OR fluoropyrimidine-oxaliplatin- (i.e., FOLFOX, CapeOx) based chemotherapy as a second-line treatment AND the patient has progressed on a first-line bevacizumab product containing regimen

  If yes, **approve for 12 months by HICL or GPI-10.**
  If no, continue to #3.

Does the patient meet **ALL** of the following criteria?
- Avastin will be used in combination with Lonsurf (trifluridine and tipiracil)
- The patient previously received treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, and an anti-VEGF biological therapy [e.g., Zaltrap (ziv-aflibercept), Cyramza (ramucirumab)]

  If yes, continue to #4.
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's metastatic colorectal cancer RAS wild-type?

  If yes, continue to #5.
  If no, **approve for 12 months by HICL or GPI-10.**

CONTINUED ON NEXT PAGE

BEVACIZUMAB (NSA)

INITIAL CRITERIA (CONTINUED)

Has the patient had treatment with an anti-EGFR agent [e.g., Erbitux (cetuximab), Vectibix (panitumumab)]?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC) and meet **ALL** of the following criteria?
Avastin will be used in combination with carboplatin and paclitaxel for first-line treatment
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient have a diagnosis of recurrent glioblastoma (GBM) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #8.

Does the patient have a diagnosis of metastatic renal cell carcinoma (mRCC) and meet **ALL** of the following criteria?
Avastin will be used in combination with interferon alfa
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #9.

CONTINUED ON NEXT PAGE

BEVACIZUMAB (NSA)

INITIAL CRITERIA (CONTINUED)

Will Avastin be used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
- The patient is not concurrently using other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.**
If no, continue to #10.

Does the patient have a diagnosis of persistent, recurrent, or metastatic cervical cancer and meet **ALL** of the following criteria?
- Avastin will be used in combination with paclitaxel and cisplatin OR paclitaxel and topotecan
- The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #11.

Does the patient have a diagnosis of platinum-resistant recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer and meet **ALL** of the following criteria?
- Avastin will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan
- The patient has received no more than 2 prior chemotherapy regimens
- The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #12.

Does the patient have a diagnosis of platinum-sensitive recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer and meet **ONE** of the following criteria?
- Avastin will be used in combination with carboplatin and paclitaxel
- Avastin will be used in combination with carboplatin and gemcitabine
- Avastin will be used as a single agent after prior use in combination with one of the carboplatin-containing chemotherapy regimens listed above

If yes, continue to #13.
If no continue to #14.

BEVACIZUMAB (NSA)

INITIAL CRITERIA (CONTINUED)

Has the patient had a trial of or contraindication to **ONE** of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of stage III or IV epithelial ovarian, fallopian tube, or primary peritoneal cancer and meet **ALL** of the following criteria?
Avastin will be used following initial surgical resection
Avastin will be used in combination with carboplatin and paclitaxel, OR as a single agent after prior use in combination with carboplatin and paclitaxel
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #15.

Does the patient have a diagnosis of unresectable or metastatic hepatocellular carcinoma (HCC) and meet **ALL** of the following criteria?
Avastin will be used in combination with Tecentriq (atezolizumab)
The patient has not received prior systemic therapy
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BEVACIZUMAB (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB (Avastin)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
- Metastatic colorectal cancer (mCRC: colon cancer that has spread in the body)
- Unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC: type of lung cancer that cannot be completely removed with surgery or has spread/returned)
- Recurrent glioblastoma (GBM: type of brain tumor)
- Metastatic renal cell carcinoma (mRCC: type of kidney cancer)
- An ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendation
- Persistent, recurrent, or metastatic cervical cancer (type of uterus cancer)
- Platinum-resistant recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Platinum-sensitive recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Stage III or IV epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Unresectable or metastatic hepatocellular carcinoma (HCC: type of liver cancer that cannot be completely removed with surgery or has spread to other parts of the body)

If you have metastatic colorectal cancer, approval also requires:
You meet ONE of the following:
- Avastin will be used in combination with intravenous (given into the vein) 5-fluorouracil based chemotherapy for first or second-line treatment
- Your disease has progressed (gotten worse) on a first-line bevacizumab product-containing regimen AND Avastin will be used in combination with fluoropyrimidine-irinotecan- (such as FOLFIRI) or fluoropyrimidine-oxaliplatin- (such as FOLFOX, CapeOx) based chemotherapy as a second-line treatment
- Avastin will be used in combination with Lonsurf (trifluridine and tipiracil), AND you have previously been treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy (drugs used to treat cancer) and an anti-VEGF biological therapy (such as Zaltrap [ziv-aflibercept], Cyramza [ramucirumab]). In addition, if you are RAS wild-type (a type of gene), you were previously treated with an anti-EGFR therapy (such as Erbitux [cetuximab], Vectibix [panitumumab])

You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

(Initial denial text continued on next page)

BEVACIZUMAB (NSA)

INITIAL CRITERIA (CONTINUED)

If you have unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer, approval also requires:
- Avastin will be used in combination with carboplatin and paclitaxel for first-line treatment
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have recurrent glioblastoma, approval also requires:
- You are 18 years of age or older
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have metastatic renal cell carcinoma, approval also requires:
- Avastin will be used in combination with interferon-alfa
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (eye doctor) or retina (a part of the eye) specialist
- You are NOT concurrently (at the same time) using other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If you have persistent, recurrent, or metastatic cervical cancer, **approval also requires:**
- Avastin will be used in combination with paclitaxel and cisplatin OR paclitaxel and topotecan
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have platinum-resistant recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer, approval also requires:
- Avastin will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan
- You have received no more than two prior chemotherapy regimens
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

(Initial denial text continued on next page)

BEVACIZUMAB (NSA)

INITIAL CRITERIA (CONTINUED)

If you have platinum-sensitive recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer, approval also requires:
- You meet ONE of the following:
  - Avastin will be used in combination with carboplatin and paclitaxel, OR with carboplatin and gemcitabine
  - Avastin will be used as a single agent after previous use in combination with one of the carboplatin-containing chemotherapy regimens listed above
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have stage III or IV epithelial ovarian, fallopian tube or primary peritoneal cancer, approval also requires:
- Avastin will be used following initial surgical resection (removal)
- Avastin will be used in combination with carboplatin and paclitaxel OR as a single agent after previous use in combination with carboplatin and paclitaxel
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have unresectable or metastatic hepatocellular carcinoma, approval also requires:
- Avastin will be used in combination with Tecentriq (atezolizumab)
- You have not received prior systemic therapy (treatment that spreads throughout the body)
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BEVACIZUMAB (NSA)

RENEWAL CRITERIA

NOTE: For diagnoses other than an ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, please refer to the initial criteria section.

Is Avastin being used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
The patient has maintenance or improvement of visual acuity
The patient is not concurrently using other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.**
If no, do not approve.
RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB (Avastin)** requires the following rule(s) be met for renewal:
You have an ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendations
You have maintenance or improvement of visual acuity (vision clarity or sharpness)
You are NOT concurrently (at the same time) using other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of metastatic colorectal cancer (mCRC)?

If yes, continue to #2.
If no, continue to #6.

Does the patient meet **ONE** of the following criteria?
- Vegzelma will be used in combination with intravenous 5-fluorouracil based chemotherapy for first or second-line treatment
- Vegzelma will be used in combination with fluoropyrimidine-irinotecan- (i.e., FOLFIRI) or fluoropyrimidine-oxaliplatin- (i.e., FOLFOX, CapeOx) based chemotherapy as a second-line treatment AND the patient has progressed on a first-line bevacizumab product-containing regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Does the patient meet **ALL** of the following criteria?
- Vegzelma will be used in combination with Lonsurf (trifluridine and tipiracil)
- The patient previously received treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, and an anti-VEGF biological therapy [e.g., Zaltrap (ziv-aflibercept), Cyramza (ramucirumab)]

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's metastatic colorectal cancer RAS wild-type?

If yes, continue to #5.
If no, **approve for 12 months by HICL or GPI-10.**

Has the patient had treatment with an anti-EGFR agent [e.g., Erbitux (cetuximab), Vectibix (panitumumab)]?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BEVACIZUMAB-ADCD (NSA)

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC) **AND** meet the following criterion?
Vegzelma will be used in combination with carboplatin and paclitaxel for first-line treatment

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient have a diagnosis of recurrent glioblastoma (GBM) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #8.

Does the patient have a diagnosis of metastatic renal cell carcinoma (mRCC) **AND** meet the following criterion?
Vegzelma will be used in combination with interferon alfa

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #9.

Will Vegzelma be used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
The patient is not concurrently using other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.**
If no, continue to #10.

Does the patient have a diagnosis of persistent, recurrent, or metastatic cervical cancer and meet **ONE** of the following criteria?
Vegzelma will be used in combination with paclitaxel and cisplatin
Vegzelma will be used in combination with paclitaxel and topotecan

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #11.

BEVACIZUMAB-ADCD (NSA)

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of stage III or IV epithelial ovarian, fallopian tube, or primary peritoneal cancer and meet **ALL** of the following criteria?
Vegzelma will be used following initial surgical resection
Vegzelma will be used in combination with carboplatin and paclitaxel OR as a single agent after prior use in combination with carboplatin and paclitaxel

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #12.

Does the patient have a diagnosis of platinum-resistant recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer and meet **ALL** of the following criteria?
Vegzelma will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan
The patient has received no more than two prior chemotherapy regimens

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #13.

Does the patient have a diagnosis of platinum-sensitive recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer and meet **ONE** of the following criteria?
Vegzelma will be used in combination with carboplatin and paclitaxel
Vegzelma will be used in combination with carboplatin and gemcitabine
Vegzelma will be used as a single agent after prior use in combination with one of the carboplatin-containing chemotherapy regimens listed above

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #14.

Does the patient have a diagnosis of unresectable or metastatic hepatocellular carcinoma (HCC) and meet **ALL** of the following criteria?
Vegzelma will be used in combination with Tecentriq (atezolizumab)
The patient has not received prior systemic therapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BEVACIZUMAB-ADCD (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-ADCD (Vegzelma)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
- Metastatic colorectal cancer (mCRC: colon cancer that has spread in the body)
- Unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC: type of lung cancer that cannot be completely removed with surgery or has spread/returned)
- Recurrent glioblastoma (GBM: type of brain tumor)
- Metastatic renal cell carcinoma (mRCC: type of kidney cancer)
- An ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendation
- Persistent, recurrent, or metastatic cervical cancer (type of uterus cancer)
- Stage III or IV epithelial ovarian, fallopian tube (female sex organs), or primary peritoneal (abdomen) cancer
- Platinum-resistant recurrent epithelial ovarian, fallopian tube (female sex organs), or primary peritoneal (abdomen) cancer
- Platinum-sensitive recurrent epithelial ovarian, fallopian tube (female sex organs), or primary peritoneal (abdomen) cancer
- Unresectable or metastatic hepatocellular carcinoma (HCC: a type of liver cancer that cannot be completely removed with surgery or has spread to other parts of the body)

If you have metastatic colorectal cancer, approval also requires ONE of the following:
- Vegzelma will be used in combination with intravenous (given into the vein) 5-fluorouracil based chemotherapy for first or second-line treatment
- Your disease has progressed (gotten worse) on a first-line bevacizumab-containing regimen AND Vegzelma will be used in combination with fluoropyrimidine- irinotecan- (such as FOLFIRI) or fluoropyrimidine-oxaliplatin- (such as FOLFOX, CapeOx) based chemotherapy as a second-line treatment
- Vegzelma will be used in combination with Lonsurf (trifluridine and tipiracil), AND you have previously been treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy (drugs used to treat cancer) and an anti-VEGF biological therapy (such as Zaltrap [ziv-aflibercept], Cyramza [ramucirumab]). In addition, if you are RAS wild-type (a type of gene), you were previously treated with an anti-EGFR therapy (such as Erbitux [cetuximab], Vectibix [panitumumab])

If you have unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer, approval also requires:
- Vegzelma will be used in combination with carboplatin and paclitaxel for first-line treatment

(Initial denial text continued on next page)

BEVACIZUMAB-AWWB (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BEVACIZUMAB-AWWB	MVASI	44500		GPI-10 (2133502020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of metastatic colorectal cancer (mCRC)?

If yes, continue to #2.
If no, continue to #6.

Does the patient meet **ONE** of the following criteria?
Mvasi will be used in combination with intravenous 5-fluorouracil based chemotherapy for first or second-line treatment
Mvasi will be used in combination with fluoropyrimidine-irinotecan (i.e., FOLFIRI) or fluoropyrimidine-oxaliplatin (i.e., FOLFOX, CapeOx) based chemotherapy as a second-line treatment AND the patient has progressed on a first-line bevacizumab product-containing regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue #3.

Does the patient meet **ALL** of the following criteria?
Mvasi will be used in combination with Lonsurf (trifluridine and tipiracil)
The patient previously received treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, and an anti-VEGF biological therapy [e.g., Zaltrap (ziv-aflibercept), Cyramza (ramucirumab)]

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's metastatic colorectal cancer RAS wild-type?

If yes, continue to #5.
If no, **approve for 12 months by HICL or GPI-10.**

Has the patient had treatment with an anti-EGFR agent [e.g., Erbitux (cetuximab), Vectibix (panitumumab)]?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BEVACIZUMAB-AWWB (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-AWWB (Mvasi)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
- Metastatic colorectal cancer (mCRC: colon cancer that has spread in the body)
- Unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC: type of lung cancer that cannot be completely removed with surgery or has spread/returned)
- Recurrent glioblastoma (GBM: type of brain tumor)
- Metastatic renal cell carcinoma (mRCC: type of kidney cancer)
- An ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendation
- Persistent, recurrent, or metastatic cervical cancer (type of uterus cancer)
- Stage III or IV epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Platinum-resistant recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Platinum-sensitive recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Unresectable or metastatic hepatocellular carcinoma (HCC: type of liver cancer that cannot be completely removed with surgery or has spread to other parts of the body)

If you have metastatic colorectal cancer, approval also requires ONE of the following:
- Mvasi will be used in combination with intravenous (given into the vein) 5-fluorouracil based chemotherapy for first or second-line treatment
- Your disease has progressed (gotten worse) on a first-line bevacizumab product-containing regimen AND Mvasi will be used in combination with fluoropyrimidine-irinotecan (such as FOLFIRI) or fluoropyrimidine-oxaliplatin (such as FOLFOX, CAPeOX) based chemotherapy as a second-line treatment
- Mvasi will be used in combination with Lonsurf (trifluridine and tipiracil), AND you have previously been treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy (drugs used to treat cancer) and an anti-VEGF biological therapy (such as Zaltrap [ziv-aflibercept], Cyramza [ramucirumab]). In addition, if you are RAS wild-type (a type of gene), you were previously treated with an anti-EGFR therapy (such as Erbitux [cetuximab], Vectibix [panitumumab])

If you have unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer, approval also requires:
- Mvasi will be used in combination with carboplatin and paclitaxel for first-line treatment

(Initial denial text continued on the next page)

BEVACIZUMAB-AWWB (NSA)

INITIAL CRITERIA (CONTINUED)

If you have recurrent glioblastoma, approval also requires:
- You are 18 years of age or older

If you have metastatic renal cell carcinoma, approval also requires:
- Mvasi will be used in combination with interferon-alfa

If you have any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (eye doctor) or retina (a part of the eye) specialist
- You are NOT concurrently (at the same time) using other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If you have persistent, recurrent, or metastatic cervical cancer, **approval also requires:**
- Mvasi will be used in combination with paclitaxel and cisplatin OR paclitaxel and topotecan

If you have Stage III or IV epithelial ovarian, fallopian tube, or primary peritoneal cancer, approval also requires:
- Mvasi will be used following initial surgical resection (removal)
- Mvasi will be used in combination with carboplatin and paclitaxel, OR as a single agent after previous use in combination with carboplatin and paclitaxel

If you have platinum-resistant recurrent epithelial ovarian, fallopian tube, or primary peritoneal cancer, approval also requires:
- Mvasi will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan
- You have received no more than two prior chemotherapy regimens

If you have platinum-sensitive recurrent epithelial ovarian, fallopian tube, or primary peritoneal cancer, approval also requires ONE of the following:
- Mvasi will be used in combination with carboplatin and paclitaxel, OR with carboplatin and gemcitabine
- Mvasi will be used as a single agent after previous use in combination with one of the carboplatin-containing chemotherapy regimens listed above

If you have unresectable or metastatic hepatocellular carcinoma, approval also requires:
- Mvasi will be used in combination with Tecentriq (atezolizumab)
- You have not received prior systemic therapy (treatment that spreads throughout the body)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BEVACIZUMAB-AWWB (NSA)

RENEWAL CRITERIA

NOTE: For diagnoses other than an ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, please refer to the initial criteria section.

Is Mvasi being used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
The patient has maintenance or improvement of visual acuity
The patient is not concurrently using other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-AWWB (Mvasi)** requires the following rule(s) be met for renewal:
You have an ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendations
You have maintenance or improvement of visual acuity (vision clarity or sharpness)
You are NOT concurrently (at the same time) using other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BEVACIZUMAB-BVZR (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BEVACIZUMAB-BVZR	ZIRABEV	45849		GPI-10 2133502030	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of metastatic colorectal cancer (mCRC)?

If yes, continue to #2.
If no, continue to #6.

Does the patient meet **ONE** of the following criteria?
- Zirabev will be used in combination with intravenous 5-fluorouracil based chemotherapy for first or second-line treatment
- Zirabev will be used in combination with fluoropyrimidine- irinotecan- (i.e., FOLFIRI) or fluoropyrimidine-oxaliplatin- (i.e., FOLFOX, CapeOx) based chemotherapy as a second-line treatment AND the patient has progressed on a first-line bevacizumab product-containing regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Does the patient meet **ALL** of the following criteria?
- Zirabev will be used in combination with Lonsurf (trifluridine and tipiracil)
- The patient previously received treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, and an anti-VEGF biological therapy [e.g., Zaltrap (ziv-aflibercept), Cyramza (ramucirumab)]

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's metastatic colorectal cancer RAS wild-type?

If yes, continue to #5.
If no, **approve for 12 months by HICL or GPI-10.**

Has the patient had treatment with an anti-EGFR agent [e.g., Erbitux (cetuximab), Vectibix (panitumumab)]?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BEVACIZUMAB-BVZR (NSA)

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC) **AND** meet the following criterion?
Zirabev will be used in combination with carboplatin and paclitaxel for first-line treatment

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient have a diagnosis of recurrent glioblastoma (GBM) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #8.

Does the patient have a diagnosis of metastatic renal cell carcinoma (mRCC) **AND** meet the following criterion?
Zirabev will be used in combination with interferon-alfa

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #9.

Will Zirabev be used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
The patient is not concurrently using other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.**
If no, continue to #10.

Does the patient have a diagnosis of persistent, recurrent, or metastatic cervical cancer and meet **ONE** of the following criteria?
Zirabev will be used in combination with paclitaxel and cisplatin
Zirabev will be used in combination with paclitaxel and topotecan

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #11.

BEVACIZUMAB-BVZR (NSA)

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of stage III or IV epithelial ovarian, fallopian tube, or primary peritoneal cancer and meet **ALL** of the following criteria?
Zirabev will be used following initial surgical resection
Zirabev will be used in combination with carboplatin and paclitaxel, OR as a single agent after prior use in combination with carboplatin and paclitaxel

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #12.

Does the patient have a diagnosis of platinum-resistant recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer and meet **ALL** of the following criteria?
Zirabev will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan
The patient has received no more than two prior chemotherapy regimens

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #13.

Does the patient have a diagnosis of platinum-sensitive recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer and meet **ONE** of the following criteria?
Zirabev will be used in combination with carboplatin and paclitaxel
Zirabev will be used in combination with carboplatin and gemcitabine
Zirabev will be used as a single agent after prior use in combination with one of the carboplatin-containing chemotherapy regimens listed above
If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #14.

Does the patient have a diagnosis of unresectable or metastatic hepatocellular carcinoma (HCC) and meet **ALL** of the following criteria?
Zirabev will be used in combination with Tecentriq (atezolizumab)
The patient has not received prior systemic therapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

BEVACIZUMAB-BVZR (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-BVZR (Zirabev)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
- Metastatic colorectal cancer (mCRC: colon cancer that has spread in the body)
- Unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC: type of lung cancer that cannot be completely removed with surgery or has spread/returned)
- Recurrent glioblastoma (GBM: type of brain tumor)
- Metastatic renal cell carcinoma (mRCC: type of kidney cancer)
- An ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendation
- Persistent, recurrent, or metastatic cervical cancer (type of uterus cancer)
- Stage III or IV epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Platinum-resistant recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Platinum-sensitive recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Unresectable or metastatic hepatocellular carcinoma (HCC: type of liver cancer that cannot be completely removed with surgery or has spread to other parts of the body)

If you have metastatic colorectal cancer, approval also requires ONE of the following:
- Zirabev will be used in combination with intravenous (given into the vein) 5-fluorouracil based chemotherapy for first or second-line treatment
- Your disease has progressed (gotten worse) on a first-line bevacizumab product-containing regimen AND Zirabev will be used in combination with fluoropyrimidine-irinotecan- (such as FOLFIRI) or fluoropyrimidine-oxaliplatin- (such as FOLFOX, CAPeOX) based chemotherapy as a second-line treatment
- Zirabev will be used in combination with Lonsurf (trifluridine and tipiracil), AND you have previously been treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy (drugs used to treat cancer) and an anti-VEGF biological therapy (such as Zaltrap [ziv-aflibercept], Cyramza [ramucirumab]). In addition, if you are RAS wild-type (a type of gene), you were previously treated with an anti-EGFR therapy (such as Erbitux [cetuximab], Vectibix [panitumumab])

If you have unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer, approval also requires:
- Zirabev will be used in combination with carboplatin and paclitaxel for first-line treatment

(Initial denial text continued on next page)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-MALY (Alymsys)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
- Metastatic colorectal cancer (mCRC: colon cancer that has spread in the body)
- Unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC: type of lung cancer that cannot be completely removed with surgery or has spread/returned)
- Recurrent glioblastoma (GBM: type of brain tumor)
- Metastatic renal cell carcinoma (mRCC: type of kidney cancer)
- An ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendation
- Persistent, recurrent, or metastatic cervical cancer (type of uterus cancer)
- Platinum-resistant recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Platinum-sensitive recurrent epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Stage III or IV epithelial ovarian, fallopian tube (female sex organs) or primary peritoneal (abdomen) cancer
- Unresectable or metastatic hepatocellular carcinoma (HCC: type of liver cancer that cannot be completely removed with surgery or has spread to other parts of the body)

If you have metastatic colorectal cancer, approval also requires:
You meet ONE of the following:
- Alymsys will be used in combination with intravenous (given into the vein) 5-fluorouracil based chemotherapy for first or second-line treatment
- Your disease has progressed (gotten worse) on a first-line bevacizumab product-containing regimen AND Alymsys will be used in combination with fluoropyrimidine-irinotecan- (such as FOLFIRI) or fluoropyrimidine-oxaliplatin- (such as FOLFOX, CapeOx) based chemotherapy as a second-line treatment
- Alymsys will be used in combination with Lonsurf (trifluridine and tipiracil), AND you have previously been treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy (drugs used to treat cancer) and an anti-VEGF biological therapy (such as Zaltrap [ziv-aflibercept], Cyramza [ramucirumab]). In addition, if you are RAS wild-type (a type of gene), you were previously treated with an anti-EGFR therapy (such as Erbitux [cetuximab], Vectibix [panitumumab])

You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

(Initial denial text continued on next page)

BEVACIZUMAB-MALY (NSA)

INITIAL CRITERIA (CONTINUED)

If you have unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer, approval also requires:
- Alymsys will be used in combination with carboplatin and paclitaxel for first-line treatment
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have recurrent glioblastoma, approval also requires:
- You are 18 years of age or older
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have metastatic renal cell carcinoma, approval also requires:
- Alymsys will be used in combination with interferon-alfa
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (eye doctor) or retina (a part of the eye) specialist
- You are NOT concurrently (at the same time) using other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If you have persistent, recurrent, or metastatic cervical cancer, approval also requires:
- Alymsys will be used in combination with paclitaxel and cisplatin OR paclitaxel and topotecan
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have platinum-resistant recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer, approval also requires:
- Alymsys will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan
- You have received no more than two prior chemotherapy regimens
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

(Initial denial text continued on next page)

BEVACIZUMAB-MALY (NSA)

INITIAL CRITERIA (CONTINUED)

If you have platinum-sensitive recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer, approval also requires:
- You meet ONE of the following:
  - Alymsys will be used in combination with carboplatin and paclitaxel OR with carboplatin and gemcitabine
  - Alymsys will be used as a single agent after previous use in combination with one of the carboplatin-containing chemotherapy regimens listed above
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have stage III or IV epithelial ovarian, fallopian tube or primary peritoneal cancer, approval also requires:
- Alymsys will be used following initial surgical resection (removal)
- Alymsys will be used in combination with carboplatin and paclitaxel OR as a single agent after previous use in combination with carboplatin and paclitaxel
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If you have unresectable or metastatic hepatocellular carcinoma, approval also requires:
- Alymsys will be used in combination with Tecentriq (atezolizumab)
- You have not received prior systemic therapy (treatment that spreads throughout the body)
- You have tried or have a contraindication (harmful for) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BEVACIZUMAB-MALY (NSA)

RENEWAL CRITERIA

NOTE: For diagnoses other than an ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, please refer to the initial criteria section.

Is Alymsys being used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
The patient has maintenance or improvement of visual acuity
The patient is not concurrently using other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-MALY (Alymsys)** requires the following rule(s) be met for renewal:
You have an ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendations
You have maintenance or improvement of visual acuity (vision clarity or sharpness)
You are NOT concurrently (at the same time) using other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of metastatic colorectal cancer (mCRC) (ICD-10 C19) **AND** meet the following criterion?
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, continue to #2.
If no, continue to #6.

Does the patient meet **ONE** of the following criteria?
Jobevne will be used in combination with intravenous 5-fluorouracil based chemotherapy
Jobevne will be used in combination with fluoropyrimidine- irinotecan- (e.g., FOLFIRI) or fluoropyrimidine-oxaliplatin- (e.g., FOLFOX, CapeOx) based chemotherapy AND the patient has progressed on a first-line bevacizumab product containing regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Does the patient meet **ALL** of the following criteria?
Jobevne will be used in combination with Lonsurf (trifluridine and tipiracil)
The patient previously received treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, and an anti-VEGF biological therapy [e.g., Zaltrap (ziv-aflibercept), Cyramza (ramucirumab)]

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's metastatic colorectal cancer RAS wild-type?

If yes, continue to #5.
If no, **approve for 12 months by HICL or GPI-10.**

BEVACIZUMAB-NWGD

INITIAL CRITERIA (CONTINUED)

Has the patient had treatment with an anti-EGFR agent [e.g., Erbitux (cetuximab), Vectibix (panitumumab)]?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
Jobevne will be used in combination with carboplatin and paclitaxel
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient have a diagnosis of recurrent glioblastoma (GBM) (ICD-10 (ICD-10 C72.9; Group C71) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #8.

Does the patient have a diagnosis of metastatic renal cell carcinoma (mRCC) (ICD-10 Groups C64, C65) and meet **ALL** of the following criteria?
Jobevne will be used in combination with interferon alfa
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #9.

BEVACIZUMAB-NWGD

INITIAL CRITERIA (CONTINUED)

Will Jobevne be used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
- Jobevne will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.**
If no, continue to #10.

Does the patient have a diagnosis of persistent, recurrent, or metastatic cervical cancer (ICD-10 Group C53) and meet **ALL** of the following criteria?
- Jobevne will be used in combination with paclitaxel and cisplatin OR paclitaxel and topotecan
- The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #11.

Does the patient have a diagnosis of epithelial ovarian, fallopian tube, or primary peritoneal cancer (ICD-10 Groups C56, C57.0, C48, C79.6) **AND** meet the following criterion?
- The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, continue to #12.
If no, continue to 15.

Is the cancer platinum-resistant recurrent and the patient meets **ALL** of the following criteria?
- Jobevne will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan
- The patient has received no more than 2 prior chemotherapy regimens

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #13.

Is the cancer platinum-sensitive recurrent and the patient meets **ONE** of the following criteria?
- Jobevne will be used in combination with carboplatin and paclitaxel
- Jobevne will be used in combination with carboplatin and gemcitabine
- Jobevne will be used as a single agent after prior use in combination with one of the carboplatin-containing chemotherapy regimens listed above

If yes, **approve for 12 months by HICL or GPI-10**.
If no continue to #14.

INITIAL CRITERIA (CONTINUED)

Is the cancer stage III or IV and the patient meets **ALL** of the following criteria?
Jobevne will be used following initial surgical resection
Jobevne will be used in combination with carboplatin and paclitaxel, OR as a single agent after prior use in combination with carboplatin and paclitaxel

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #15.

Does the patient have a diagnosis of unresectable or metastatic hepatocellular carcinoma (HCC) (ICD-10 C22.0) and meet **ALL** of the following criteria?
Jobevne will be used in combination with Tecentriq (atezolizumab)
The patient has not received prior systemic therapy
The patient had a trial of or contraindication to ONE of the following preferred agents: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab-adcd), Zirabev (bevacizumab-bvzr)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-NWGD (Jobevne)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
Metastatic colorectal cancer (mCRC: colon cancer that has spread in the body)
Unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer (NSCLC: type of lung cancer that cannot be completely removed with surgery or has spread/returned)
Recurrent glioblastoma (GBM: type of brain tumor)
Metastatic renal cell carcinoma (mRCC: type of kidney cancer that has spread in the body)
An ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendation
Persistent, recurrent, or metastatic cervical cancer (type of uterus cancer)
Epithelial ovarian, fallopian tube, or primary peritoneal cancer (types of reproductive system or abdomen cancers)
Unresectable or metastatic hepatocellular carcinoma (HCC: type of liver cancer that cannot be completely removed with surgery or has spread to other parts of the body)
(Initial denial text continued on next page)

INITIAL CRITERIA (CONTINUED)

If you have metastatic colorectal cancer, approval also requires:
- You meet ONE of the following:
  - Jobevne will be used in combination with intravenous (given into the vein) 5-fluorouracil based chemotherapy
  - Your disease has progressed (gotten worse) on a first-line bevacizumab product-containing regimen AND Jobevne will be used in combination with fluoropyrimidine-irinotecan- (such as FOLFIRI) or fluoropyrimidine-oxaliplatin- (such as FOLFOX, CapeOx) based chemotherapy
  - Jobevne will be used in combination with Lonsurf (trifluridine and tipiracil), AND you have previously been treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy (drugs used to treat cancer) and an anti-VEGF biological therapy (such as Zaltrap [ziv-aflibercept], Cyramza [ramucirumab]). In addition, if you are RAS wild-type (a type of gene), you were previously treated with an anti-EGFR therapy (such as Erbitux [cetuximab], Vectibix [panitumumab])
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab- adcd), Zirabev (bevacizumab-bvzr)

If you have unresectable, locally advanced, recurrent or metastatic non-squamous non-small cell lung cancer, approval also requires:
- Jobevne will be used in combination with carboplatin and paclitaxel
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab- adcd), Zirabev (bevacizumab-bvzr)

If you have recurrent glioblastoma, approval also requires:
- You are 18 years of age or older
- You have tried or have a contraindication to (harmful for you to use) to ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab- adcd), Zirabev (bevacizumab-bvzr)

If you have metastatic renal cell carcinoma, approval also requires:
- Jobevne will be used in combination with interferon-alfa
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab- adcd), Zirabev (bevacizumab-bvzr)

(Initial denial text continued on next page)

CONTINUED ON NEXT PAGE

INITIAL CRITERIA (CONTINUED)

If you have any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (eye doctor) or retina (a part of the eye) specialist
- You will NOT Jobevne concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic (eye) indication

If you have persistent, recurrent, or metastatic cervical cancer, **approval also requires:**
- Jobevne will be used in combination with paclitaxel and cisplatin OR paclitaxel and topotecan
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab- adcd), Zirabev (bevacizumab-bvzr)

If you have epithelial ovarian, fallopian tube, or primary peritoneal cancer, approval also requires:
- You meet ONE of the following:
  - Your cancer is platinum-resistant recurrent (no longer responds to a type of treatment); Jobevne will be used in combination with paclitaxel, pegylated liposomal doxorubicin, or topotecan; AND you have received no more than 2 prior chemotherapy regimens (received no more than 2 prior chemotherapy regimens)
  - Your cancer is platinum-sensitive recurrent (responds to a type of treatment); AND Jobevne will be used in combination with carboplatin and paclitaxel, OR with carboplatin and gemcitabine, OR as a single agent after previous use in combination with one of these carboplatin-containing chemotherapy regimens
  - Your cancer is stage III or IV; Jobevne will be used following initial surgical resection (removal); AND Jobevne will be used in combination with carboplatin and paclitaxel, or as a single agent after previous use in combination with carboplatin and paclitaxel
- You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Mvasi (bevacizumab-awwb), Vegzelma (bevacizumab- adcd), Zirabev (bevacizumab-bvzr)

BEVACIZUMAB-NWGD

RENEWAL CRITERIA

NOTE: For diagnoses other than an ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation, please refer to the initial criteria section.

Is Jobevne being used to treat any ophthalmic indication listed in Micromedex/Drugdex with Class I, IIa, or IIb recommendation and the patient meets **ALL** of the following criteria?
- The patient has maintenance or improvement of visual acuity
- Jobevne will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #8mL per 30 days.** If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEVACIZUMAB-NWGD (Jobevne)** requires the following rule(s) be met for renewal:
- You have an ophthalmic (eye) indication listed in Micromedex/Drugdex (drug database) with Class I, IIa, or IIb recommendations
- You have maintenance or improvement of visual acuity (vision clarity or sharpness)
- You will NOT Jobevne concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Susvimo [ranibizumab], Lucentis [ranibizumab], Beovu [brolucizumab-dbll]) for any ophthalmic indication

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BEXAROTENE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BEXAROTENE	TARGRETIN, BEXAROTENE	20832		GPI-10 (2170822000, 9037622000)	

****Please use the criteria for the specific drug requested****

GUIDELINES FOR USE

TARGRETIN (BEXAROTENE) CAPSULE

Does the patient have a diagnosis of cutaneous T-cell lymphoma (CTCL) (ICD-10 Group C84.A)
AND meet the following criterion?
The patient is refractory to at least one prior systemic therapy (e.g., gemcitabine, methotrexate, liposomal doxorubicin, bortezomib)

If yes, **approve for 12 months by GPID or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEXAROTENE (Targretin capsule)** requires the following rule(s) be met for approval:
You have cutaneous T-cell lymphoma (CTCL: a type of blood cancer)
You are refractory (condition does not respond to treatment) to at least one prior systemic therapy (treatment that targets the entire body, such as gemcitabine, methotrexate, liposomal doxorubicin, bortezomib)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BEXAROTENE

GUIDELINES FOR USE (CONTINUED)

TARGRETIN (BEXAROTENE) GEL

Does the patient have a diagnosis of cutaneous T-cell lymphoma (CTCL) (Stage IA or IB) (ICD-10 Group C84.A) and meet **ONE** of the following criteria?
The patient has refractory or persistent disease after other therapies
The patient has not tolerated other therapies

If yes, **approve for 12 months by GPID or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BEXAROTENE (Targretin gel)** requires the following rule(s) to be met for approval:
You have cutaneous T-cell lymphoma (CTCL: a type of blood cancer) (Stage IA or IB)
You meet ONE of the following:
- You have refractory (condition does not respond) or persistent (condition continues to exist) disease after other therapies
- You have not tolerated other therapies

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Targretin.

BIMEKIZUMAB-BKZX

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BIMEKIZUMAB-BKZX	BIMZELX	47629		GPI-10 (9025051800)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- The patient is a candidate for systemic therapy or phototherapy
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

If yes, continue to #2.
If no, continue to #4.

Does the patient meet **ONE** of the following criteria?
- The patient has had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) OR PUVA (phototherapy) for the treatment of PsO
- The patient has a contraindication or intolerance to both clinical standard of care therapies: an immunosuppressant AND PUVA (phototherapy) for the treatment of PsO
- The patient is switching from a different biologic (e.g., Humira [adalimumab]), PDE-4 inhibitor (e.g., Otezla [apremilast]), or JAK inhibitor for the same indication

If yes, continue to #3.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient was previously stable on another biologic and is switching to Bimzelx
- The patient has psoriasis covering 3 percent or more of body surface area (BSA)
- The patient has psoriatic lesions affecting the hands, feet, genital area, face, or scalp

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BIMEKIZUMAB-BKZX

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

If yes, continue to #5.
If no, continue to #6.

Does the patient have coexistent moderate to severe plaque psoriasis (PsO)? (**Note:** For psoriatic arthritis patients with coexistent moderate to severe plaque psoriasis, use the dosing and administration recommendations for plaque psoriasis.)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1mL per 28 days.**

Does the patient have a diagnosis of non-radiographic axial spondyloarthritis (nr-axSpA) (ICD-10 Group M45.A) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Taltz [ixekizumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of nr-axSpA
- The patient had a trial of or contraindication to the clinical standard of care agent: an NSAID (e.g., ibuprofen, naproxen, meloxicam)

If yes, continue to #7.
If no, continue to #8.

Does the patient meet **ONE** of the following criteria?
- The patient was previously stable on another biologic and is switching to Bimzelx
- The patient has C-reactive protein (CRP) levels above the upper limit of normal
- The patient has sacroiliitis on magnetic resonance imaging (MRI)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1mL per 28 days.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BIMEKIZUMAB-BKZX

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS
- The patient had a trial of or contraindication to the clinical standard of care agent: an NSAID (e.g., ibuprofen, naproxen, meloxicam)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1mL per 28 days.** If no, continue to #9.

Does the patient have a diagnosis of moderate to severe hidradenitis suppurativa (HS) (ICD-10 L73.2) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HS

If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #4mL per 28 days.** If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BIMEKIZUMAB-BKZX (Bimzelx)** requires the following rule(s) be met for approval:

You have ONE of the following:
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Non-radiographic axial spondyloarthritis (nr-axSpA: a type of joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Moderate to severe hidradenitis suppurativa (HS: a type of skin condition)

(Initial denial text continued on next page)

BIMEKIZUMAB-BKZX

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe plaque psoriasis, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You are a candidate for systemic therapy (treatment that targets the entire body) or phototherapy (light therapy)
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)
- You meet ONE of the following:
  - You have had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis (a type of skin condition)
  - You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of medication that decreases the body's immune response) AND PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis (a type of skin condition)
  - You are switching from a different biologic (such as Humira [adalimumab]), PDE-4 (phosphodiesterase-4) inhibitor (such as Otezla [apremilast]), or JAK (Janus kinase) inhibitor for the same indication
- You meet ONE of the following:
  - You were previously stable on another biologic and are switching to Bimzelx
  - You have psoriasis (a type of skin condition) covering 3 percent or more of body surface area (BSA)
  - You have psoriatic lesions (rashes) affecting the hands, feet, genital area, face, or scalp

If you have psoriatic arthritis, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or dermatologist (a type of skin doctor)
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)

BIMEKIZUMAB-BKZX

INITIAL CRITERIA (CONTINUED)

If you have non-radiographic axial spondyloarthritis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Taltz [ixekizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of non-radiographic axial spondyloarthritis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: an NSAID (nonsteroidal anti-inflammatory drug, such as ibuprofen, naproxen, meloxicam)
- You meet ONE of the following:
  - You were previously stable on another biologic and are switching to Bimzelx
  - You have C-reactive protein (CRP: a measure of how much inflammation is in the body) levels above the upper limit of normal
  - You have sacroiliitis (a type of inflammation where lower spine and pelvis connect) on magnetic resonance imaging (MRI: a type of imaging lab)

If you have ankylosing spondylitis, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: an NSAID (nonsteroidal anti-inflammatory drug, such as ibuprofen, naproxen, meloxicam)

If you have moderate to severe hidradenitis suppurativa, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of hidradenitis suppurativa (a type of skin condition)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BIMEKIZUMAB-BKZX

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient has achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more while on therapy
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, continue to #2.

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

If yes, continue to #3.
If no, continue to #4.

Does the patient have coexistent moderate to severe plaque psoriasis (PsO)? (**Note:** For psoriatic arthritis patients with coexistent moderate to severe plaque psoriasis, use the dosing and administration recommendations for plaque psoriasis.)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1mL per 28 days.**

Does the patient have a diagnosis of non-radiographic axial spondyloarthritis (nr-axSpA) (ICD-10 Group M45.A) and meet **ALL** of the following criteria?
- The patient has experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) while on therapy
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Taltz [ixekizumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of nr-axSpA

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1mL per 28 days.**
If no, continue to #5.

BIMEKIZUMAB-BKZX

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient has experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) while on therapy
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1mL per 28 days.** If no, continue to #6.

Does the patient have a diagnosis of moderate to severe hidradenitis suppurativa (HS) (ICD-10 L73.2) and meet **ALL** of the following criteria?
- The patient has shown improvement in HS symptoms
- Bimzelx will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HS

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.** If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BIMEKIZUMAB-BKZX (Bimzelx)** requires the following rule(s) be met for renewal:

You have ONE of the following:
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Non-radiographic axial spondyloarthritis (nr-axSpA: a type of joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Moderate to severe hidradenitis suppurativa (HS: a type of skin condition)

(Renewal denial text continued on next page)

CONTINUED ON NEXT PAGE

RENEWAL CRITERIA (CONTINUED)

If you have moderate to severe plaque psoriasis, renewal also requires:
- You have achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index: a tool for evaluating the severity of psoriasis) of at least 50 percent or more while on therapy
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)

If you have psoriatic arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)

If you have non-radiographic axial spondyloarthritis, renewal also requires:
- You have experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI: diagnostic test which allows a physician to determine the effectiveness of a current medication) while on therapy
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Taltz [ixekizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of non-radiographic axial spondyloarthritis (a type of joint condition)

If you have ankylosing spondylitis, renewal also requires:
- You have experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI: diagnostic test which allows a physician to determine the effectiveness of a current medication) while on therapy
- You will NOT use Bimzelx concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)

(Renewal denial text continued on next page)

BINIMETINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BINIMETINIB	MEKTOVI	45040		GPI-10 (2153352000)	

GUIDELINES FOR USE

Does the patient have a diagnosis of unresectable or metastatic melanoma (ICD-10 Group C43) and meet **ALL** of the following criteria?
The patient has a BRAF V600E or V600K mutation, as detected by an FDA-approved test
Mektovi will be used in combination with Braftovi (encorafenib)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #6 per day.**
If no, continue to #2.

Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has a BRAF V600E mutation, as detected by an FDA-approved test
Mektovi will be used in combination with Braftovi (encorafenib)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #6 per day.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BINIMETINIB (Mektovi)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Unresectable or metastatic melanoma (a type of skin cancer that cannot be removed by surgery or has spread to other parts of the body)
- Metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread to other parts of the body)

If you have unresectable or metastatic melanoma, approval also requires:
- You have a BRAF V600E or V600K mutation (types of gene mutations), as detected by a Food and Drug Administration (FDA)-approved test
- Mektovi will be used in combination with Braftovi (encorafenib)

If you have metastatic non-small cell lung cancer, approval also requires:
- You are 18 years of age or older
- You have a BRAF V600E mutation (a type of gene mutation), as detected by a Food and Drug Administration (FDA)-approved test
- Mektovi will be used in combination with Braftovi (encorafenib)

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BLINATUMOMAB (Blincyto)** requires the following rule(s) be met for approval:

You have CD19 (a type of protein)-positive B-cell precursor acute lymphoblastic leukemia (ALL: a type of blood cancer)

You meet ONE of the following:

- You have minimal residual disease (MRD)-positive acute lymphoblastic leukemia (a small number of cancer cells remain after treatment), you are in first or second complete remission (no symptoms or signs of disease), AND you have minimal residual disease of at least 0.1 percent
- You have relapsed or refractory acute lymphoblastic leukemia (a type of blood cancer that has returned or did not respond to treatment)
- You have Philadelphia chromosome-negative acute lymphoblastic leukemia (a type of blood cancer) AND you are in the consolidation phase (treatment following initial therapy) of multiphase chemotherapy (cancer treatment that involves multiple courses of therapy)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BORTEZOMIB (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BORTEZOMIB	VELCADE, BORUZU, BORTEZOMIB	25202		GPI-10 (2153601500)	

GUIDELINES FOR USE

Does the patient have a diagnosis of multiple myeloma (ICD-10 Group C90.0) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #2.

Does the patient have a diagnosis of mantle cell lymphoma (ICD-10 Group C83.1) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BORTEZOMIB (Velcade, Boruzu)** requires the following rule(s) be met for approval:
You have ONE of the following:
Multiple myeloma (a type of blood cancer)
Mantle cell lymphoma (a type of blood cancer)
You are 18 years of age or older

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

PRIOR AUTHORIZATION GUIDELINES

BOSENTAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BOSENTAN	TRACLEER, BOSENTAN	22990		GPI-10 (4016001500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of pulmonary arterial hypertension (PAH) (WHO Group 1) (ICD- 10 I27.0, Group I27.2) and meet **ALL** of the following criteria?
The patient is 3 years of age or older
Therapy is prescribed by or in consultation with a cardiologist or pulmonologist
The patient does NOT have idiopathic pulmonary fibrosis (IPF)
Tracleer will NOT be used concurrently with cyclosporine A or glyburide

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Is the patient's PAH diagnosis confirmed by right heart catheterization with **ALL** of the following parameters?
Mean pulmonary artery pressure (PAP) of greater than 20 mmHg
Pulmonary capillary wedge pressure (PCWP) of less than or equal to 15 mmHg
Pulmonary vascular resistance (PVR) of greater than 2 Wood units (WU)

If yes, **approve for 12 months by GPID or GPI-14 for all strengths with the following quantity limits:**
62.5mg tablet: #2 per day.
125mg tablet: #2 per day.
32mg tablet for suspension: #4 per day.

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BOSENTAN

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BOSENTAN (Tracleer)** requires the following rule(s) be met for approval:
You have pulmonary arterial hypertension (PAH: a type of heart and lung condition) (World Health Organization [WHO] Group 1)
You are 3 years of age and older
Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor) or pulmonologist (lung/breathing doctor)
You do NOT have idiopathic pulmonary fibrosis (scarring of the lungs due to an unknown cause)
You will NOT use Tracleer concurrently (at the same time) with cyclosporine A or glyburide
Your pulmonary arterial hypertension is confirmed by ALL of the following lab values by putting a catheter (narrow flexible tube) into the right side of your heart:
Mean pulmonary artery pressure (PAP) greater than 20 mmHg
Pulmonary capillary wedge pressure (PCWP) less than or equal to 15 mmHg
Pulmonary vascular resistance (PVR) greater than 2 Wood units

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BOSUTINIB

GUIDELINES FOR USE (CONTINUED)

Does the patient have a resistance or intolerance to a prior therapy (e.g., Gleevec [imatinib], Sprycel [dasatinib], Tasigna [nilotinib]) **AND** meet the following criterion?
The patient had a mutational analysis prior to initiation of therapy AND Bosulif is appropriate based on the NCCN guideline table for treatment recommendations based on BCR-ABL1 mutation profile *(Please see header CML-5 of the current NCCN guidelines)*

If yes, **approve the requested strength for 12 months by GPID or GPI-14 with the following quantity limits:**
500mg: #1 per day.
400mg: #1 per day.
100mg: #6 per day.
50mg: #1 per day.

If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Is the Ph+ CML in accelerated phase (AP) or blast phase (BP), and the patient meets **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has a resistance or intolerance to a prior therapy (e.g., Gleevec [imatinib], Sprycel [dasatinib], Tasigna [nilotinib])
The patient had a mutational analysis prior to initiation of therapy AND Bosulif is appropriate based on the NCCN guideline table for treatment recommendations based on BCR-ABL1 mutation profile *(Please see header CML-5 of the current NCCN guidelines)*

If yes, **approve the requested strength for 12 months by GPID or GPI-14 with the following quantity limits:**
500mg: #1 per day.
400mg: #1 per day.
100mg: #6 per day.
50mg: #1 per day.

If no, do not approve.

BOSUTINIB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT:

Our guideline named **BOSUTINIB (Bosulif)** requires the following rule(s) be met for approval:
You have Philadelphia chromosome-positive chronic myelogenous leukemia (Ph+ CML: a type of blood cell cancer)
If you have Philadelphia chromosome-positive chronic myelogenous leukemia in chronic phase (CP), approval also requires:
You are 1 year of age or older
You meet ONE of the following:
You are newly diagnosed (such as you are starting or previously started Bosulif treatment at the time your condition was identified)
You have a resistance (medication no longer works as well) or intolerance (side effect) to a prior therapy (such as Gleevec [imatinib], Sprycel [dasatinib], Tasigna [nilotinib]); you had a mutational analysis (a type of lab test) prior to the start of therapy; AND Bosulif is appropriate based on the National Comprehensive Cancer Network (NCCN) guideline table for treatment recommendations based on BCR- ABL1 mutation (breakpoint cluster region-Abelson murine leukemia 1: a type of abnormal gene) profile
If you have Philadelphia chromosome-positive chronic myelogenous leukemia in accelerated phase (AP) or blast phase (BP), approval also requires:
You are 18 years of age or older
You have a resistance (medication no longer works as well) or intolerance (side effect) to a prior therapy (such as Gleevec [imatinib], Sprycel [dasatinib], Tasigna [nilotinib])
You had a mutational analysis (a type of lab test) prior to the start of therapy; AND Bosulif is appropriate based on the National Comprehensive Cancer Network (NCCN) guideline table for treatment recommendations based on BCR-ABL1 mutation (breakpoint cluster region-Abelson murine leukemia 1: a type of abnormal gene) profile

BREMELANOTIDE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BREMELANOTIDE ACETATE	VYLEESI	45878		GPI-10 (6217351510)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Is Vyleesi (bremelanotide) a covered benefit?

If yes, continue to #2.
If no, guideline does not apply.

Does the patient have a diagnosis of acquired, generalized hypoactive sexual desire disorder (HSDD) (ICD-10 F52.0) (also referred to as female sexual interest/arousal disorder [FSIAD] [ICD-10 F52.22] per DSM-5), as defined by **ALL** of the following criteria?
The patient has persistently or recurrently deficient (or absent) sexual fantasies and desire for sexual activity that has persisted for at least 6 months
The patient's HSDD is NOT a result of a co-existing medical or psychiatric condition, a problem within the relationship, or the effects of a medication or drug substance
The patient's HSDD symptom causes marked distress or interpersonal difficulty

If yes, continue to #3.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ALL** of the following criteria?
The patient is a premenopausal female
The patient is 18 years of age or older
The patient had a trial of or contraindication to bupropion
Vylessi will NOT be used concurrently with Addyi (flibanserin)

If yes, **approve for 8 weeks by HICL or GPI-10 with a quantity limit of #2.4mL per month.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BREMELANOTIDE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BREMELANOTIDE (Vyleesi)** requires the following rule(s) be met for approval:

- You have acquired, generalized hypoactive sexual desire disorder (HSDD) (also referred to as female sexual interest/arousal disorder [FSIAD]) (a type of sexual disorder), as defined by ALL of the following:
  - You have persistently (continues to exist) or recurrently (continues to return) deficient (absent) sexual fantasies and desire for sexual activity that has persisted for at least 6 months
  - Your HSDD (a type of sexual disorder) is NOT a result of a co-existing medical or psychiatric (mental) condition, a problem within the relationship, or the effects of a medication or drug substance
  - Your HSDD (a type of sexual disorder) symptom causes marked distress or interpersonal difficulty
- You are a premenopausal (before menopause) female
- You are 18 years of age or older
- You have tried or have a contraindication to (harmful for you to use) bupropion
- You will NOT use Vylessi concurrently (at the same time) with Addyi (flibanserin)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BREMELANOTIDE

RENEWAL CRITERIA

Does the patient meet **ALL** of the following criteria?

Vyleesi will NOT be used concurrently with Addyi (flibanserin)

The patient has demonstrated continued improvement in symptoms of hypoactive sexual desire disorder (HSDD)/female sexual interest/arousal disorder (FSIAD) (e.g., increased sexual desire, lessened distress)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2.4mL per month.** If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BREMELANOTIDE (Vyleesi)** requires the following rule(s) be met for renewal:

You will NOT use Vyleesi concurrently (at the same time) with Addyi (flibanserin)

You have experienced continued improvement in symptoms of hypoactive sexual desire disorder (HSDD)/female sexual interest/arousal disorder (FSIAD) (a type of sexual disorder) (such as increased sexual desire, reduced distress)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BRENTUXIMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BRENTUXIMAB VEDOTIN	ADCETRIS	37879		GPI-10 (2135322020)	

GUIDELINES FOR USE

Does the patient have a diagnosis of classical Hodgkin lymphoma (cHL) (ICD-10 Group C81)?

If yes, continue #2.
If no, continue to #7.

Is the patient's cancer at stage III or IV and the patient meets **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has not been previously treated
Adcetris will be used in combination with doxorubicin, vinblastine, and dacarbazine

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Is the patient's cancer considered high-risk and the patient meets **ALL** of the following criteria?
The patient is 2 years of age or older
The patient has not been previously treated
Adcetris will be used in combination with doxorubicin, vincristine, etoposide, prednisone, and cyclophosphamide

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #4.

Is the patient at high risk for relapse or disease progression post-autologous hematopoietic stem cell transplant (auto-HSCT) (defined as refractory, relapse within 12 months, or relapse at least 12 months with extranodal disease) and the patient meets **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has obtained complete remission (CR), partial remission (PR), or stable disease (SD) to most recent pre-auto-HSCT salvage therapy

If yes, **approve for 12 months by HICL or GPI-10**.
If no, continue to #5.

Has the patient's cancer relapsed **AND** the patient meets the following criterion?
The patient is 18 years of age or older

If yes, continue to #6.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

BRENTUXIMAB

GUIDELINES FOR USE (CONTINUED)

Does the patient meet **ONE** of the following criteria?
The patient has failed an autologous hematopoietic stem cell transplant (auto-HSCT)
The patient is not an auto-HSCT candidate AND has failed at least two multi-agent chemotherapy regimens (e.g., ABVD [doxorubicin, bleomycin, vinblastine, dacarbazine], Stanford V [doxorubicin, vinblastine, mechlorethamine, etoposide, vincristine, bleomycin, prednisone], BEACOPP [bleomycin, etoposide, doxorubicin, cyclophosphamide, vincristine, procarbazine, prednisone])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Does the patient have a diagnosis of systemic anaplastic large cell lymphoma (sALCL) (ICD-10 Groups C84.6, C84.7) **AND** meet the following criterion?
The patient is 18 years of age or older

If yes, continue to #8.
If no, continue to #10.

Is the patient previously untreated **AND** Adcetris will be used in combination with cyclophosphamide, doxorubicin, and prednisone?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #9.

Has the patient relapsed **AND** failed at least one multi-agent chemotherapy regimen (e.g., CHOP [cyclophosphamide, doxorubicin, vincristine, prednisone], CHOEP [cyclophosphamide, doxorubicin, vincristine, etoposide, prednisone])?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

BRENTUXIMAB

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of CD30-expressing peripheral T-cell lymphomas (PTCL), including angioimmunoblastic T-cell lymphoma (ICD-10 C86.5) or PTCL not otherwise specified (ICD-10 Group C84.4), and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has not been previously treated
Adcetris will be used in combination with cyclophosphamide, doxorubicin, and prednisone

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #11.

Does the patient have a diagnosis of primary cutaneous anaplastic large cell lymphoma (pcALCL) (ICD-10 C86.6) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has received prior systemic therapy (e.g., CHOP [cyclophosphamide, doxorubicin, vincristine, prednisone], methotrexate)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #12.

Does the patient have a diagnosis of mycosis fungoides (MF) (Group C84.0) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's cancer is CD30-positive
The patient has received prior systemic therapy (e.g., Istodax [romidepsin], methotrexate)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #13.

BRENTUXIMAB

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of large B-cell lymphoma (LBCL) (ICD-10 Groups C83.3, C85.2), including diffuse large B-cell lymphoma (DLBCL) not other specified (ICD-10 Group C83.3), DLBCL arising from indolent lymphoma (ICD-10 Group C83.3), or high-grade B-cell lymphoma (HGBL), and meet **ALL** of the following criteria?
The patent is 18 years of age or older
The patient's cancer is relapsed or refractory
Adcetris will be used in combination with Revlimid (lenalidomide) AND a rituximab product (e.g., Rituxan [rituximab], Truxima [rituximab-abbs])
The patient has tried at least two lines of systemic therapy (e.g., R-CHOP [rituximab, cyclophosphamide, doxorubicin, vincristine and prednisone], GemOx [gemcitabine, oxaliplatin])
The patient is not eligible for auto-HSCT or chimeric antigen receptor (CAR) T-cell therapy (e.g., Yescarta [axicabtagene ciloleucel], Kymriah [tisagenlecleucel])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it

Our guideline named **BRENTUXIMAB (Adcetris)** requires the following rule(s) be met for approval:
You have ONE of the following:
Classical Hodgkin lymphoma (a type of blood cancer)
Systemic anaplastic large cell lymphoma (a type of blood cancer)
CD30-expressing peripheral T-cell lymphomas (a type of blood cancer)
Primary cutaneous anaplastic large cell lymphoma (a type of blood cancer)
Mycosis fungoides (a type of blood cancer affecting the skin)
Large B-cell lymphoma (LBCL), which includes diffuse large B-cell lymphoma (DLBCL) not other specified, DLBCL arising from indolent lymphoma, or high-grade B-cell lymphoma (HGBL) (types of blood cancer)
(Denial text continued on next page)

BRENTUXIMAB

GUIDELINES FOR USE (CONTINUED)

If you have classical Hodgkin lymphoma, approval also requires ONE of the following:
- Your cancer is stage III or IV; you are 18 years of age or older; you have not been previously treated; AND Adcetris will be used in combination with doxorubicin, vinblastine, and dacarbazine
- Your cancer is considered high-risk; you are 2 years of age or older; you have not been previously treated; AND Adcetris will be used in combination with doxorubicin, vincristine, etoposide, prednisone, and cyclophosphamide
- You are at high risk for relapse (disease comes back) or disease progression (disease gets worse) after having autologous hematopoietic stem cell transplant (auto-HSCT) (defined as refractory [disease does not respond to treatment], relapse within 12 months, or relapse at least 12 months with extranodal [area outside of the lymph node] disease); you are 18 years of age or older; AND you have obtained complete/partial remission (little or no sign of cancer in your body), or stable disease to most recent pre-auto-HSCT salvage therapy
- Your cancer has relapsed; you are 18 years of age or older; AND you have failed autologous hematopoietic stem cell transplant (auto-HSCT: transplant cells are from your own body)
- Your cancer has relapsed; you are 18 years of age or older; you are not a candidate for auto-HSCT; AND you have failed at least two multi-agent chemotherapy regimens (such as ABVD [doxorubicin, bleomycin, vinblastine, dacarbazine], Stanford V [doxorubicin, vinblastine, mechlorethamine, etoposide, vincristine, bleomycin, prednisone], BEACOPP [bleomycin, etoposide, doxorubicin, cyclophosphamide, vincristine, procarbazine, prednisone])

If you have systemic anaplastic large cell lymphoma, approval also requires:
- You are 18 years of age or older
- You meet ONE of the following:
  - You have not been previously treated AND Adcetris will be used in combination with cyclophosphamide, doxorubicin, and prednisone
  - Your cancer has relapsed (disease that has returned) AND you have failed at least one multi-agent chemotherapy regimen (such as CHOP [cyclophosphamide, doxorubicin, vincristine, prednisone], CHOEP [cyclophosphamide, doxorubicin, vincristine, etoposide, prednisone])

If you have CD30-expressing peripheral T-cell lymphomas, including angioimmunoblastic T-cell lymphoma or peripheral T-cell lymphoma not otherwise specified, approval also requires:
- You are 18 years of age or older
- You have not been previously treated
- Adcetris will be used in combination with cyclophosphamide, doxorubicin, and prednisone

(Denial text continued on next page)

BRENTUXIMAB

GUIDELINES FOR USE (CONTINUED)

If you have primary cutaneous anaplastic large cell lymphoma, approval also requires:
- You are 18 years of age or older
- You have received prior systemic therapy (treatment that targets the entire body such as CHOP [cyclophosphamide, doxorubicin, vincristine, prednisone], methotrexate)

If you have mycosis fungoides, approval also requires:
- You are 18 years of age or older
- Your cancer is CD30 (a type of protein)-positive
- You have received prior systemic therapy (treatment that targets the entire body such as Istodax [romidepsin], methotrexate)

If you have large B-cell lymphoma, which includes diffuse large B-cell lymphoma not other specified, diffuse large B-cell lymphoma arising from indolent lymphoma, or high-grade B-cell lymphoma, approval also requires:
- You are 18 years of age or older
- Your cancer is relapsed (disease that has returned) or refractory (did not respond to treatment)
- Adcetris will be used in combination with Revlimid (lenalidomide) AND a rituximab product (such as Rituxan [rituximab], Truxima [rituximab-abbs])
- You have has tried at least two lines of systemic therapy (such as R-CHOP [rituximab, cyclophosphamide, doxorubicin, vincristine and prednisone], GemOx [gemcitabine, oxaliplatin])
- You are not eligible for autologous hematopoietic stem cell transplantation (auto-HSCT: a type of procedure to replace damaged bone marrow with your own healthy blood-forming cells) or chimeric antigen receptor (CAR) T-cell therapy (such as Yescarta [axicabtagene ciloleucel], Kymriah [tisagenlecleucel])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

PRIOR AUTHORIZATION GUIDELINES

BRIGATINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BRIGATINIB	ALUNBRIG	44226		GPI-10 (2153051000)	

GUIDELINES FOR USE

Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet ALL of the following criteria?
The patient is 18 years of age or older
The patient's tumor is positive for anaplastic lymphoma kinase (ALK) fusion oncogene, as detected by an FDA-approved test

If yes, **approve all strengths for 12 months by GPID or GPI-14 with the following quantity limits:**
30 mg: #120 per 30 days.
90 mg: #30 per 30 days.
180 mg: #30 per 30 days.
90 mg-180 mg initiation pack: #30 per 30 days.

If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BRIGATINIB (Alunbrig)** requires the following rule(s) be met for approval:
You have metastatic non-small cell lung cancer (NSCLC: type of lung cancer that has spread to other parts of the body)
You are 18 years of age or older
Your tumors are positive for anaplastic lymphoma kinase (ALK) fusion oncogene (a type of abnormal gene), as detected by a Food and Drug Administration (FDA)-approved test

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Alunbrig.

PRIOR AUTHORIZATION GUIDELINES

BRODALUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BRODALUMAB	SILIQ	44102		GPI-10 (9025052000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?

- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- The patient has psoriasis covering 3 percent or more of body surface area (BSA) OR psoriatic lesions affecting the hands, feet, genital area, face, or scalp
- The patient has been counseled on and expresses understanding of the risk of suicidal ideation and behavior
- Siliq will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Tremfya (guselkumab)
  - Skyrizi (risankizumab-rzaa)
  - Enbrel (etanercept)
  - Otezla (apremilast)
  - Taltz (ixekizumab)
  - Sotyktu (deucravacitinib)
  - Bimzelx (bimekizumab-bkzx)
  - Adalimumab-ryvk/adalimumab-aaty
  - Icotyde (icotrokinra)

  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, continue to #2.
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

BRODALUMAB

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?

- The patient has had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) OR PUVA (phototherapy) for the treatment of PsO
- The patient has a contraindication or intolerance to both clinical standard of care therapies: an immunosuppressant AND PUVA (phototherapy) for the treatment of PsO
- The patient is switching from a different biologic (e.g., Humira [adalimumab]), PDE-4 inhibitor (e.g., Otezla [apremilast]), or JAK inhibitor for the same indication

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #3mL per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #6mL per 28 days.)**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BRODALUMAB (Siliq)** requires the following rule(s) be met for approval:
You have moderate to severe plaque psoriasis (PsO: a type of skin condition)
You are 18 years of age or older
Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
You have psoriasis (a type of skin condition) covering 3 percent or more of body surface area (BSA) OR psoriatic lesions (rashes) affecting the hands, feet, genital area, face, or scalp
You have been counseled on and express an understanding of the risk of suicidal thoughts and behavior
You will NOT use Siliq concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)
(Initial denial text continued on next page)

BRODALUMAB

INITIAL CRITERIA (CONTINUED)

You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
- Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
- Tremfya (guselkumab)
- Skyrizi (risankizumab-rzaa)
- Enbrel (etanercept)
- Otezla (apremilast)
- Taltz (ixekizumab)
- Sotyktu (deucravacitinib)
- Bimzelx (bimekizumab-bkzx)
- Adalimumab-ryvk/adalimumab-aaty
- Icotyde (icotrokinra)

You meet ONE of the following:
- You have had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) OR PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis (a type of skin condition)
- You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of medication that decreases the body's immune response) AND PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis (a type of skin condition)
- You are switching from a different biologic (such as Humira [adalimumab]), PDE-4 (phosphodiesterase-4) inhibitor (such as Otezla [apremilast]), or JAK (Janus kinase) inhibitor for the same indication

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

BRODALUMAB

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?

- The patient has achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more
- The patient has NOT developed or reported worsening depressive symptoms or suicidal ideation and behaviors
- Siliq will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Tremfya (guselkumab)
  - Skyrizi (risankizumab-rzaa)
  - Enbrel (etanercept)
  - Otezla (apremilast)
  - Taltz (ixekizumab)
  - Sotyktu (deucravacitinib)
  - Bimzelx (bimekizumab-bkzx)
  - Adalimumab-ryvk/adalimumab-aaty
  - Icotyde (icotrokinra)

  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #3mL per 28 days.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

BRODALUMAB

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BRODALUMAB (Siliq)** requires the following rule(s) be met for renewal:
You have moderate to severe plaque psoriasis (PsO: a type of skin condition)
You have achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index: a tool for evaluating the severity of psoriasis [a type of skin condition]) of at least 50 percent or more
You have NOT developed or reported worsening depressive symptoms or suicidal thoughts and behaviors while on treatment with Siliq
You will NOT use Siliq concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)
You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
Tremfya (guselkumab)
Skyrizi (risankizumab-rzaa)
Enbrel (etanercept)
Otezla (apremilast)
Taltz (ixekizumab)
Sotyktu (deucravacitinib)
Bimzelx (bimekizumab-bkzx)
Adalimumab-ryvk/adalimumab-aaty
Icotyde (icotrokinra)

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Siliq.

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

BROLUCIZUMAB-DBLL (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BROLUCIZUMAB-DBLL	BEOVU	46051		GPI-10 (8665502520)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of neovascular (wet) age-related macular degeneration (nAMD) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
Beovu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Eylea, Lucentis, Susvimo)

If yes, **approve for 4 months by HICL or GPI-10 for 3 fills with the following quantity limits:**
For one eye: #0.05mL per 28 days.
For two eyes: #0.1mL per 28 days.

If no, continue to #2.

Does the patient have a diagnosis of diabetic macular edema (DME) and meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
Beovu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Eylea, Lucentis, Vabysmo)

If yes, **approve for 8 months by HICL or GPI-10 for 5 fills with the following quantity limits:**
For one eye: #0.05mL per 42 days.
For two eyes: #0.1mL per 42 days.

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BROLUCIZUMAB-DBLL (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BROLUCIZUMAB-DBLL (Beovu)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
- Neovascular (wet) age-related macular degeneration (nAMD: a type of eye disease)
- Diabetic macular edema (DME: a type of eye condition caused by high blood sugar)

If you have neovascular age-related macular degeneration, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
- You are NOT using Beovu at the same time with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Eylea, Lucentis, Susvimo)

If you have diabetic macular edema, approval also requires:
- Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
- You are NOT using Beovu at the same time with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Eylea, Lucentis, Vabysmo)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RENEWAL CRITERIA

Does the patient have a diagnosis of neovascular (wet) age-related macular degeneration (nAMD) and meet **ALL** of the following criteria?
- The patient has maintained or improved visual acuity
- Beovu will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Eylea, Lucentis, Susvimo)

If yes, **approve for 12 months by HICL or GPI-10 with the following quantity limits:**
For one eye: #0.05mL per 56 days.
For two eyes: #0.1mL per 56 days.

If no, continue to #2.

BUDESONIDE - TARPEYO

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BUDESONIDE	TARPEYO		51745	GPI-14 (22100012006520)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of primary immunoglobulin A nephropathy (IgAN) (ICD-10 Group N02.B) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a nephrologist
- The patient's diagnosis is confirmed by a renal biopsy
- The patient has a progressively declining glomerular filtration rate (GFR) and/or worsening proteinuria (e.g., greater than 1 gram protein/24-hour urine collection or UPCR [urine protein to creatinine ratio] of at least 1 g/g)
- The patient has an eGFR of at least 35 mL/min/1.73m^2
- The patient has tried an ACE inhibitor (e.g., benazepril, lisinopril) or an ARB (e.g., losartan, valsartan) for at least 3 months at a maximum tolerated dose and will continue use, OR has a contraindication to both drug classes

If yes, **approve for 9 months by GPID or GPI-14 with a quantity limit of #4 per day.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BUDESONIDE - TARPEYO** requires the following rule(s) be met for approval:
- You have primary immunoglobulin A nephropathy (IgAN: a type of kidney disease)
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a nephrologist (a type of kidney doctor)
- Your diagnosis is confirmed by a renal biopsy (removal of cells or tissue from the kidney for examination)
- You have a progressively declining glomerular filtration rate (GFR: a tool for evaluating kidney function) and/or worsening proteinuria (increased levels of protein in the urine, such as greater than 1 gram protein in a 24-hour urine collection or at least 1 g/g urine protein to creatinine ratio [UPCR: a test that measures the amount of protein in urine])

(Initial denial text continued on the next page)

BUDESONIDE - TARPEYO

INITIAL CRITERIA (CONTINUED)

You have an estimated glomerular filtration rate (eGFR: a tool for evaluating kidney function) of at least 35 mL/min/1.73m^2
You have tried an angiotensin converting enzyme inhibitor (ACE-I: a type of medication used to protect kidneys, such as benazepril, lisinopril) or an angiotensin receptor blocker (ARB: a type of medication used to protect kidneys, such as losartan, valsartan) for at least 3 months at a maximum tolerated dose and will continue use, OR you have a contraindication to (harmful for you to use) both of these medication classes

BUDESONIDE - TARPEYO

RENEWAL CRITERIA

Does the patient have a diagnosis of primary immunoglobulin A nephropathy (IgAN) (ICD-10 Group N02.B) and meet **ONE** of the following criteria?
The patient has improved or stable kidney function compared to baseline
The patient has a reduction in proteinuria

If yes, **approve for 9 months by GPID or GPI-14 with a quantity limit of #4 per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BUDESONIDE - TARPEYO** requires the following rule(s) be met for renewal:
You have primary immunoglobulin A nephropathy (IgAN: a type of kidney disease)
You have improved or stable kidney function compared to baseline (before starting Tarpeyo)
OR you have a reduction in proteinuria (lowered levels of protein in the urine)

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Tarpeyo.

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BUDESONIDE	EOHILIA		55273	GPI-14 (22100012001820)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of eosinophilic esophagitis (EoE) (ICD-10 K20.0) and meet **ALL** of the following criteria?
The patient is 11 years of age or older
Therapy is prescribed by or in consultation with a gastroenterologist or allergist
The patient has at least 15 eosinophils/hpf in the esophagus as confirmed by a biopsy
The patient had a trial of or contraindication to one inhaled corticosteroid (e.g., Flovent [fluticasone], Pulmicort [budesonide]) OR one generic proton pump inhibitor (e.g., omeprazole, lansoprazole, pantoprazole)

If yes, **approve for 3 months by GPID or GPI-14 with a quantity limit of #20mL per day.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BUDESONIDE-EOHILIA** requires the following rule(s) be met for approval:
You have eosinophilic esophagitis (a type of immune system disorder)
You are 11 years of age or older
Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions) or allergist (a type of allergy doctor)
You have at least 15 eosinophils/high powered field (a type of lab test) in the esophagus as confirmed by a biopsy (removal of cells or tissue from the body for examination)
You have tried or have a contraindication to (harmful for you to use) one inhaled corticosteroid (such as Flovent [fluticasone], Pulmicort [budesonide]) OR one proton pump inhibitor (such as omeprazole, lansoprazole, pantoprazole)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

BULEVIRTIDE ACETATE-GMOD	HEPCLUDEX	48141		GPI-10 (1235402001)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of chronic hepatitis delta virus (HDV) (ICD-10 B18.0) and meet **ALL** of the following criteria?

The patient is 18 years of age or older

The patient has compensated cirrhosis OR does not have cirrhosis

Therapy is prescribed by or in consultation with a gastroenterologist, infectious disease specialist, physician specializing in treatment of hepatitis (e.g., hepatologist), or a specially trained group such as ECHO (Extension for Community Healthcare Outcomes)

The patient has a positive serum anti-HDV antibody test OR a positive serum/plasma HDV RNA PCR

If yes, **approve for 6 months by HICL or GPI-10.**
If no, do not approve.

INITIAL DENIAL TEXT: Our guideline named **BULEVIRTIDE-GMOD (Hepcludex)** requires the following rule(s) be met for approval:

You have chronic (long-term) hepatitis delta virus (HDV: liver inflammation caused by a type of virus)

You are 18 years of age or older

You have compensated cirrhosis (a condition where there is liver damage and scarring without any major symptoms) OR you do not have cirrhosis (liver damage or scarring)

Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions), infectious disease specialist (a doctor who specializes in the treatment of infections), physician specializing in treatment of hepatitis (liver inflammation) (such as a hepatologist [a type of liver doctor]), or a specially trained group such as ECHO (Extension for Community Healthcare Outcomes)

You have a positive serum anti-HDV (hepatitis delta virus) antibody test (a type of blood test) OR a positive serum/plasma HDV RNA PCR (a type of blood test)

GUIDELINES FOR USE

Does the patient have a diagnosis of moderate to severe opioid use disorder (ICD-10 Group F11)
AND meet the following criterion?
The patient initiated treatment with a single dose of a transmucosal buprenorphine product (e.g., Suboxone [buprenorphine/naloxone], Zubsolv [buprenorphine/naloxone]) OR is already being treated with buprenorphine

If yes, **approve for 12 months by GPID or GPI-14 as follows:**
INITIAL REQUESTS:
FIRST APPROVAL: Approve all strengths for 1 month by GPID or GPI-14 as follows:
100 mg/0.5 mL syringe: #0.5 mL per 30 days.
300 mg/1.5 mL syringe: #3 mL per 30 days.
SECOND APPROVAL: Approve the requested strength for 11 months by GPID or GPI- 14 as follows (please enter a start date of 1 MONTH AFTER the START date of the first approval):
100 mg/0.5 mL syringe: #0.5 mL per 30 days.
300 mg/1.5 mL syringe: #1.5 mL per 30 days.
SUBSEQUENT REQUESTS:
Approve the requested strength for 12 months by GPID or GPI-14 as follows:
100 mg/0.5 mL syringe: #0.5 mL per 30 days.
300 mg/1.5 mL syringe: #1.5 mL per 30 days.

If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BUPRENORPHINE EXTENDED-RELEASE (Sublocade)** requires the following rule(s) be met for approval:
You have moderate to severe opioid use disorder (misuse of a type of pain medication)
You started treatment with a single dose of a transmucosal (medication that enters the body through a mucous layer like those in the mouth) buprenorphine product (such as Suboxone [buprenorphine/naloxone], Zubsolv [buprenorphine/naloxone]), OR you are already being treated with buprenorphine

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

PRIOR AUTHORIZATION GUIDELINES

BUROSUMAB-TWZA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BUROSUMAB-TWZA	CRYSVITA	44867		GPI-10 (3090951060)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of X-linked hypophosphatemia (XLH) confirmed by **ONE** of the following criteria?
- The patient has XLH symptoms (e.g., osteomalacia, excessive fractures, bowed legs, impaired growth) and ONE of the following:
  - The patient has a serum phosphate level of < 3.2 mg/dL in pediatric patients or <2.5 mg/dL in adults with normal vitamin D levels
  - The patient has shown hyperexpression of FGF23 protein on assay
  - The patient possesses family history of XLH
- Genotyping confirmation of the *PHEX* mutation causative of XLH

If yes, continue to #2.
If no, continue to #4.

Does the patient meet **ALL** of the following criteria?
- The patient is 6 months of age or older
- Therapy is prescribed by or in consultation with an endocrinologist, nephrologist, orthopedic surgeon, or medical geneticist
- The patient is NOT on concurrent oral phosphate salt or active vitamin D analog supplementation (e.g., calcitriol, paricalcitol)

If yes, continue to #3.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient had a trial of or failure to the clinical standard of care therapy: phosphate/vitamin D analog therapy
- The patient's disease condition, severity, and/or other variables indicate phosphate/vitamin D analog therapy is not preferable/advisable for this patient compared to anticipated outcomes with Crysvita

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #6mL per 28 days.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

BUROSUMAB-TWZA

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of FGF23-related hypophosphatemia in tumor-induced osteomalacia (TIO) confirmed by the following criterion?
- The patient has TIO symptoms (e.g., osteomalacia, excessive fractures, muscle weakness, fatigue, bone pain)

  If yes, continue to #5.
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with an endocrinologist, nephrologist, orthopedic surgeon, or medical geneticist
- The tumors cannot be curatively resected or localized
- The patient has discontinued oral phosphate and/or active vitamin D analogs (e.g., calcitriol, paricalcitol, etc.) at least 1 week prior to Crysvita initiation

  If yes, continue to #6.
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient had a trial of or failure to the clinical standard of care therapy: phosphate/vitamin D analog therapy
- The patient's disease condition, severity, and/or other variables indicate phosphate/vitamin D analog therapy is not preferable/advisable for this patient compared to anticipated outcomes with Crysvita

  If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #12mL per 28 days.**
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

BUROSUMAB-TWZA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BUROSUMAB-TWZA (Crysvita)** requires the following rule(s) be met for approval:
You have ONE of the following diagnoses:
- X-linked hypophosphatemia (XLH: inherited disorder with low phosphate blood levels)
- Fibroblast growth factor 23 (FGF23)-related hypophosphatemia in tumor-induced osteomalacia (TIO: a rare disease characterized by the development of tumors that cause weakened and softened bones. The tumors release hormones known as fibroblast growth factor 23 that lowers your phosphate levels)

If you have X-linked hypophosphatemia, approval also requires:
- Your diagnosis is confirmed by ONE of the following:
  - You have XLH symptoms such as osteomalacia (bone softening), excessive fractures, bowed legs, impaired growth and ONE of the following:
    - If you are less than 18 years of age, your serum phosphate level is less than 3.2 mg/dL with normal vitamin D levels
    - If you are 18 years of age or older, your serum phosphate level is less than 2.5 mg/dL with normal vitamin D levels
    - You have more than normal amount of FGF23 protein on assay (type of lab analysis)
    - You have a family history of X-linked hypophosphatemia
  - You have a *PHEX* mutation (Phosphate-regulating neutral endopeptidase, X-linked) confirmed by a genotyping (type of test)
- You are 6 months of age or older
- Therapy is prescribed by or in consultation with an endocrinologist (hormone doctor), nephrologist (kidney doctor), orthopedic surgeon (surgeon that deals with skeletal deformities), or medical geneticist
- You will not be taking oral phosphate salt or active vitamin D analog supplementation with the requested medication
- You meet ONE of the following:
  - You had a trial of or failure (drug did not work) to the clinical standard of care therapy: phosphate/vitamin D analog therapy (such as calcitriol, paricalcitol)
  - Your disease condition, severity, and/or other factors indicate phosphate/vitamin D analog therapy is not preferable/advisable for you compared to anticipated outcomes with Crysvita

(Initial denial text continued on next page)

BUROSUMAB-TWZA

INITIAL CRITERIA (CONTINUED)

If you have FGF23-related hypophosphatemia in tumor-induced osteomalacia, approval also requires:

- Your diagnosis is confirmed by the following:
  - You have symptoms of tumor-induced osteomalacia (such as osteomalacia [softening of the bones], excessive fractures, muscle weakness, fatigue, bone pain)
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with an endocrinologist (hormone doctor), nephrologist (kidney doctor), orthopedic surgeon (surgeon that deals with skeletal deformitis), or medical geneticist
- Your tumors cannot be curatively resected (surgically removed) or localized
- You have stopped oral phosphate and/or active vitamin D analogs (such as calcitriol, paricalcitol) at least 1 week prior to starting Crysvita
- You meet ONE of the following:
  - You had a trial of or failure (drug did not work) to the clinical standard of care therapy: phosphate/vitamin D analog therapy
  - Your disease condition, severity, and/or other factors indicate phosphate/vitamin D analog therapy is not preferable/advisable for you compared to anticipated outcomes with Crysvita

BUROSUMAB-TWZA

RENEWAL CRITERIA

Does the patient have a diagnosis of X-linked hypophosphatemia (XLH) **AND** meet the following criterion?
The patient has achieved normal blood phosphate levels as defined by reference range for age

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #6mL per 28 days.**
If no, continue to #2.

Does the patient have a diagnosis of FGF23-related hypophosphatemia in tumor-induced osteomalacia (TIO) **AND** meet the following criterion?
The patient has achieved normalization of fasting serum phosphate levels (e.g., around or above the lower limit of the reference range for age and below 5 mg/dL)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #12mL per 28 days.**

If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **BUROSUMAB-TWZA (Crysvita)** requires the following rules be met for renewal:
You have ONE of the following diagnoses:
- X-linked hypophosphatemia (XLH; inherited disorder with low phosphate blood levels)
- Fibroblast growth factor 23 (FGF23) -related hypophosphatemia in tumor-induced osteomalacia (TIO: a rare disease characterized by the development of tumors that cause weakened and softened bones. The tumors release hormones known as fibroblast growth factor 23 that lowers your phosphate levels)

If you have X-linked hypophosphatemia, renewal also requires:
- You have achieved normal blood phosphate levels as defined by the reference range for your age

If you have FGF23-related hypophosphatemia in tumor-induced osteomalacia, renewal also requires:
- You have achieved normal fasting blood phosphate levels (around or above the lower end of the reference range for age and below 5 mg/dL)

PRIOR AUTHORIZATION GUIDELINES

C1 ESTERASE INHIBITOR - BERINERT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
C1 ESTERASE INHIBITOR	BERINERT	18568		GPI-10 (8580202200)	FDB & MEDI-SPAN: BRAND = BERINERT

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
- Berinert will be used for the treatment of acute attacks of hereditary angioedema
- Therapy is prescribed by or in consultation with an allergist, immunologist, hematologist, or pulmonologist
- Berinert will NOT be used concurrently with other agents used for the treatment of acute HAE attacks (e.g., Ruconest [C1 esterase inhibitor], Firazyr [icatibant], Kalbitor [ecallantide])

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have Type I or II HAE **AND** meet the following criterion?
- The diagnosis is confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q

If yes, **approve for 12 months by NDC.**
If no, continue to #3.

Does the patient have HAE-nC1INH (Type III HAE) as confirmed by **ALL** of the following criteria?
- The patient has recurrent, non-urticarial angioedema involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated HAE AND the attacks cannot be explained by histaminergic/urticarial angioedema
- Other causes of angioedema have been excluded, including ACE-inhibitor/ARB-associated angioedema, acquired C1-INH deficiency, and mast-cell/histaminergic angioedema

If yes, **approve for 12 months by NDC.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

C1 ESTERASE INHIBITOR - BERINERT

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **C1 ESTERASE INHIBITOR - BERINERT** requires the following rule(s) be met for approval:

- You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
- Berinert will be used for the treatment of acute (sudden and severe) attacks of hereditary angioedema (HAE: a type of gene condition with severe body swelling)
- Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), immunologist (a type of immune system doctor), hematologist (a type of blood doctor), or pulmonologist (lung/breathing doctor)
- You will NOT use Berinert concurrently (at the same time) with other medications used for the treatment of acute hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Ruconest [C1 esterase inhibitor], Firazyr [icatibant], Kalbitor [ecallantide])
- You meet ONE of the following:
  - You have Type I or II hereditary angioedema (a type of gene condition with severe body swelling), as confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q (types of lab tests)
  - You have HAE-nC1INH (hereditary angioedema with normal C1 inhibitor) (Type III hereditary angioedema: a type of gene condition with severe body swelling) as confirmed by ALL of the following:
    - You have recurrent (condition continues to return), non-urticarial angioedema (a type of swelling without hives) involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated hereditary angioedema (a type of gene condition with severe body swelling) AND the attacks cannot be explained by histaminergic/urticarial angioedema (a type of swelling due to an allergic reaction)
    - Other causes of angioedema (a type of swelling) have been ruled out, including angiotensin-converting enzyme (ACE)-inhibitor/angiotensin receptor blocker (ARB)-associated angioedema (a type of swelling due to types of medications), acquired C1-INH deficiency (a type of condition that causes swelling), and mast-cell/histaminergic angioedema (a type of swelling due to an allergic reaction)

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

C1 ESTERASE INHIBITOR - BERINERT

RENEWAL CRITERIA

Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
The patient has experienced a reduction in the severity or duration of HAE attacks
Berinert will NOT be used concurrently with other agents used for the treatment of acute HAE attacks (e.g., Ruconest [C1 esterase inhibitor], Firazyr [icatibant], Kalbitor [ecallantide])

If yes, **approve for 12 months by NDC.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **C1 ESTERASE INHIBITOR - BERINERT** requires the following rule(s) be met for renewal:
You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
You have experienced a reduction (decrease) in the severity or duration of hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks
You will NOT use Berinert concurrently (at the same time) with other medications used for the treatment of acute hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Ruconest [C1 esterase inhibitor], Firazyr [icatibant], Kalbitor [ecallantide])

RATIONALE
For further information, please refer to the Prescribing Information and/or Drug Monograph for Berinert.

C1 ESTERASE INHIBITOR - CINRYZE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
C1 ESTERASE INHIBITOR	CINRYZE	18568		GPI-10 (8580202200)	BRAND = CINRYZE

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
- The patient is 6 years of age or older
- Cinryze will be used for prophylaxis against HAE attacks
- Therapy is prescribed by or in consultation with an allergist, immunologist, hematologist, or pulmonologist
- Cinryze will NOT be used concurrently with an alternative prophylactic agent for HAE attacks (e.g., Takhzyro [lanadelumab-flyo], Haegarda [C1 esterase inhibitor], danazol, Orladeyo [berotralstat], Andembry [garadacimab-gxii], Dawnzera [donidalorsen])

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have Type I or II HAE **AND** meet the following criterion?
- The diagnosis is confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q

If yes, **approve for 12 months for all NDCs with a quantity limit of #40 vials per 28 days.**
If no, continue to #3.

Does the patient have HAE-nC1INH (Type III HAE) as confirmed by **ALL** of the following criteria?
- The patient has recurrent, non-urticarial angioedema involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated HAE AND the attacks cannot be explained by histaminergic/urticarial angioedema
- Other causes of angioedema have been excluded, including ACE-inhibitor/ARB-associated angioedema, acquired C1-INH deficiency, and mast-cell/histaminergic angioedema

If yes, **approve for 12 months for all NDCs with a quantity limit of #40 vials per 28 days.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

C1 ESTERASE INHIBITOR - CINRYZE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **C1 ESTERASE INHIBITOR - CINRYZE** requires the following rule(s) be met for approval:

- You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
- You are 6 years of age or older
- Cinryze will be used for the prevention of hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks
- Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), immunologist (a type of immune system doctor), hematologist (a type of blood doctor), or pulmonologist (lung/breathing doctor)
- You will NOT use Cinryze concurrently (at the same time) with an alternative preventive medication for hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Takhzyro [lanadelumab-flyo], Haegarda [C1 esterase inhibitor], danazol, Orladeyo [berotralstat], Andembry [garadacimab-gxii], Dawnzera [donidalorsen])
- You meet ONE of the following:
  - You have Type I or II hereditary angioedema (a type of gene condition with severe body swelling), as confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q (types of lab tests)
  - You have HAE-nC1INH (hereditary angioedema with normal C1 inhibitor) (Type III hereditary angioedema: a type of gene condition with severe body swelling) as confirmed by ALL of the following:
    - You have recurrent (condition continues to return), non-urticarial angioedema (a type of swelling without hives) involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated hereditary angioedema (a type of gene condition with severe body swelling) AND the attacks cannot be explained by histaminergic/urticarial angioedema (a type of swelling due to an allergic reaction)
    - Other causes of angioedema (a type of swelling) have been ruled out, including angiotensin-converting enzyme (ACE)-inhibitor/angiotensin receptor blocker (ARB)-associated angioedema (a type of swelling due to types of medications), acquired C1-INH deficiency (a type of condition that causes swelling), and mast-cell/histaminergic angioedema (a type of swelling due to an allergic reaction)

CABOZANTINIB TABLET

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of locally advanced or metastatic differentiated thyroid cancer (DTC) (ICD-10 C73) and meet **ALL** of the following criteria?
The patient is 12 years of age or older
The patient has disease progression following prior vascular endothelial growth factor receptor (VEGFR)-targeted therapy (e.g., Lenvima [lenvatinib])
The patient is radioactive iodine-refractory or ineligible

If yes, **approve for 12 months by GPID or GPI-14 for the requested strength with the following quantity limits:**
60mg: #1 per day.
40mg: #2 per day.
20mg: #1 per day.

If no, continue to #4.

Does the patient have a diagnosis of pancreatic or extra-pancreatic neuroendocrine tumor (pNET or epNET) (ICD-10 C25.4, Group C7A) and meet **ALL** of the following criteria?
The patient is 12 years of age or older
The tumor is unresectable, locally advanced or metastatic, and well-differentiated
The tumor has been previously treated

If yes**, approve for 12 months by GPID or GPI-14 for the requested strength with a quantity limit of #1 per day.**

If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CABOZANTINIB TABLET (Cabometyx)** requires the following rule(s) be met for approval:
You have ONE of the following:
Advanced renal cell carcinoma (RCC: a type of kidney cancer)
Hepatocellular carcinoma (HCC: a type of liver cancer)
Locally advanced or metastatic differentiated thyroid cancer (DTC: a type of thyroid cancer that has spread to nearby tissue/lymph nodes or to other parts of the body)
Pancreatic neuroendocrine tumor (pNET: tumor that began in the pancreas)
Extra-pancreatic neuroendocrine tumor (epNET: tumor that began outside of the pancreas)
(Denial text continued on next page)

CABOZANTINIB TABLET

GUIDELINES FOR USE (CONTINUED)

If you have advanced renal cell carcinoma, approval also requires ONE of the following:
Cabometyx will be used as a single agent (used alone)
Cabometyx will be used in combination with Opdivo (nivolumab) or Opdivo Qvantig (nivolumab-hyaluronidase-nvhy)

If you have hepatocellular carcinoma, approval also requires:
You have been previously treated with Nexavar (sorafenib)

If you have locally advanced or metastatic differentiated thyroid cancer, approval also requires:
You are 12 years of age or older
You have disease progression (worsening) following prior vascular endothelial growth factor receptor (VEGFR)-targeted therapy (such as Lenvima [lenvatinib])
You are radioactive iodine-refractory (resistant to) or ineligible

If you have a pancreatic or extra-pancreatic neuroendocrine tumor, approval also requires:
You are 12 years of age or older
Your tumor is unresectable (unable to remove by surgery), locally advanced or metastatic (cancer that has spread to nearby tissue/lymph nodes or to other parts of the body), and well-differentiated
Your tumor has been previously treated

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

CALASPARGASE PEGOL-MKNL

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CALASPARGASE PEGOL-MKNL	ASPARLAS	45566		GPI-10 (2125003050)	

GUIDELINES FOR USE

Does the patient have a diagnosis of acute lymphoblastic leukemia (ALL) (ICD-10 Group C91.0) and meet **ALL** of the following criteria?
The patient is 1 month to 21 years of age
Asparlas will be used as a component of a multi-agent chemotherapeutic regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CALASPARGASE PEGOL-MKNL (Asparlas)** requires the following rule(s) be met for approval:
You have acute lymphoblastic leukemia (ALL: a type of blood cancer)
You are 1 month to 21 years of age
Asparlas will be used as a part of a chemotherapeutic (medications used to treat cancer) plan that contains multiple medications

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Asparlas.

CANAKINUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CANAKINUMAB/PF	ILARIS	36497		GPI-10 (6646002000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of Cryopyrin-Associated Periodic Syndromes (CAPS) (ICD-10 M04.2), including Familial Cold Auto-inflammatory Syndrome (FCAS) or Muckle-Wells Syndrome (MWS), and meet **ALL** of the following criteria?
- The patient is 4 years of age or older
- The patient has genetic testing for gain-of-function mutations in the *NLRP3* gene OR has inflammatory markers (i.e., elevated CRP, ESR, serum amyloid A protein (SAA) or S100 proteins)
- The patient has TWO of the following: urticarial-like rash (neutrophilic dermatitis), cold-triggered episodes, sensorineural hearing loss, musculoskeletal symptoms, chronic aseptic meningitis, skeletal abnormalities
- Ilaris will NOT be used concurrently with another systemic biologic (e.g., Arcalyst [rilonacept]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of CAPS, including FCAS or MWS

If yes, **approve for lifetime by HICL or GPI-10 with a quantity limit of #1mL per 56 days.**
If no, continue to #2.

Does the patient have a diagnosis of Tumor Necrosis Factor Receptor Associated Periodic Syndrome (TRAPS) (ICD-10 M04.1) **AND** meet the following criterion?
- Ilaris will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of TRAPS

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, continue to #3.

Does the patient have a diagnosis of Hyperimmunoglobulin D Syndrome (HIDS)/Mevalonate Kinase Deficiency (MKD) (ICD-10 M04.1) **AND** meet the following criterion?
- Ilaris will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of HIDS/MKD

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, continue to #4.

CANAKINUMAB

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of Familial Mediterranean Fever (FMF) (ICD-10 M04.1) **AND** meet the following criterion?
- Ilaris will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of FMF

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, continue to #5.

Does the patient have a diagnosis of Adult-Onset Still's Disease (AOSD) (ICD-10 M06.1) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with a rheumatologist, dermatologist, or immunologist
- Ilaris will NOT be used concurrently with another systemic biologic (e.g., Kineret [anakinra]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of AOSD
- The patient had a trial of or contraindication to the preferred agent: Kineret (anakinra) [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify.]

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, continue to #6.

Does the patient have a diagnosis of systemic juvenile idiopathic arthritis (SJIA) (ICD-10 Group M08.2) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist, dermatologist, or immunologist
- Ilaris will NOT be used concurrently with another systemic biologic (e.g., Actemra [tocilizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of SJIA
- The patient had a trial of or contraindication to the following preferred agent: Tyenne (tocilizumab-aazg)
  [**NOTE**: Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify.]

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, continue to #7.

CANAKINUMAB

INITIAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of gout flares (ICD-10 Group M10) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Ilaris will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of gout flares

If yes, continue to #8.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Has the patient had a trial of or contraindication to **ALL** of the following?
- Colchicine
- An NSAID (non-steroidal anti-inflammatory drug) (e.g., ibuprofen, naproxen, indomethacin)
- A corticosteroid (e.g., triamcinolone, methylprednisolone, prednisone, prednisolone)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1mL per 84 days.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CANAKINUMAB (Ilaris)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Cryopyrin-Associated Periodic Syndromes (CAPS: a type of immune disorder), including Familial Cold Auto-inflammatory Syndrome (FCAS: a type of immune disorder) or Muckle-Wells Syndrome (MWS: a type of immune disorder)
- Tumor Necrosis Factor Receptor Associated Periodic Syndrome (TRAPS: a type of genetic disease)
- Hyperimmunoglobulin D Syndrome (HIDS)/Mevalonate Kinase Deficiency (MKD) (types of genetic disorders)
- Familial Mediterranean Fever (FMF: a type of genetic disorder)
- Adult-Onset Still's Disease (AOSD: an autoinflammatory disease)
- Systemic juvenile idiopathic arthritis (SJIA: a type of joint condition)
- Gout flares (episodes of pain or swelling associated with a type of joint condition)

(Initial denial text continued on next page)

CANAKINUMAB

INITIAL CRITERIA (CONTINUED)

If you have Cryopyrin-Associated Periodic Syndromes, including Familial Cold Auto-inflammatory Syndrome or Muckle-Wells Syndrome, approval also requires:
- You are 4 years of age or older
- You had genetic testing for gain-of-function mutations (abnormal change in gene) in the *NLRP3* gene (a type of gene) OR you have inflammatory markers (elevated C-reactive protein [CRP: a measure of how much inflammation is in the body], erythrocyte sedimentation rate [ESR: a measure of how much inflammation is in the body], serum amyloid A protein [SAA: a type of protein] or S100 proteins [a type of protein])
- You have TWO of the following: urticarial-like rash (neutrophilic dermatitis: a type of skin condition), cold-triggered episodes, sensorineural hearing loss (SNHL: a type of hearing loss), musculoskeletal symptoms (symptoms related to the skin and bones), chronic aseptic meningitis (inflammation of the brain and spinal cord), and skeletal (bone) abnormalities
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic (such as Arcalyst [rilonacept]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Cryopyrin-Associated Periodic Syndromes, including Familial Cold Auto-inflammatory Syndrome or Muckle-Wells Syndrome (types of immune disorders)

If you have Tumor Necrosis Factor Receptor Associated Periodic Syndrome, approval also requires:
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Tumor Necrosis Factor Receptor Associated Periodic Syndrome (a type of genetic disease)

If you have Hyperimmunoglobulin D Syndrome/Mevalonate Kinase Deficiency, approval also requires:
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Hyperimmunoglobulin D Syndrome/Mevalonate Kinase Deficiency (types of genetic disorders)

If you have Familial Mediterranean Fever, approval also requires:
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Familial Mediterranean Fever (a type of genetic disorder)

(Initial denial text continued on next page)

CANAKINUMAB

INITIAL CRITERIA (CONTINUED)

If you have Adult-Onset Still's Disease, approval also requires:
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor), dermatologist (a type of skin doctor), or immunologist (a type of immune system doctor)
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic (such as Kineret [anakinra]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Adult-Onset Still's Disease (an autoinflammatory disease)
- You have tried or have a contraindication to (harmful for you to use) the preferred medication: Kineret (anakinra)

If you have systemic juvenile idiopathic arthritis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor), dermatologist (a type of skin doctor), or immunologist (a type of immune system doctor)
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic (such as Actemra [tocilizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of systemic juvenile idiopathic arthritis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the following preferred medication: Tyenne (tocilizumab-aazg)

If you have gout flares, approval also requires:
- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of gout flares (episodes of pain or swelling associated with a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) ALL of the following:
  - Colchicine
  - An NSAID (non-steroidal anti-inflammatory drug, such as ibuprofen, naproxen, indomethacin)
  - A corticosteroid (such as triamcinolone, methylprednisolone, prednisone, prednisolone)

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

CANAKINUMAB

RENEWAL CRITERIA

NOTE: For the diagnoses of Cryopyrin-Associated Periodic Syndromes (CAPS), including Familial Cold Auto-inflammatory Syndrome (FCAS) or Muckle-Wells Syndrome (MWS), Tumor Necrosis Factor Receptor Associated Periodic Syndrome (TRAPS), Hyperimmunoglobulin D Syndrome (HIDS)/Mevalonate Kinase Deficiency (MKD), or Familial Mediterranean Fever (FMF), please refer to the Initial Criteria section.

Does the patient have a diagnosis of Adult-Onset Still's Disease (AOSD) (ICD-10 M06.1) and meet **ALL** of the following criteria?

Ilaris will NOT be used concurrently with another systemic biologic (e.g., Kineret [anakinra]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of AOSD

The patient has maintained or improved systemic inflammatory disease (e.g., fevers, pain, rash, arthritis) or the patient has achieved a reduction in corticosteroid (e.g., prednisone) dose

The patient's disease is still clinically active (remission has not been attained) OR discontinuing therapy will result in harm to the patient

The patient had a trial of or contraindication to the preferred agent: Kineret (anakinra) [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify.]

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, continue to #2.

Does the patient have a diagnosis of systemic juvenile idiopathic arthritis (SJIA) (ICD-10 Group M08.2) and meet **ALL** of the following criteria?

Ilaris will NOT be used concurrently with another systemic biologic (e.g., Actemra [tocilizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of SJIA

The patient had a trial of or contraindication to the following preferred agent: Tyenne (tocilizumab-aazg)
[**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify.]

If yes, continue to #3.
If no, continue to #4.

CONTINUED ON NEXT PAGE

CANAKINUMAB

RENEWAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- The patient has maintained or improved systemic inflammatory disease (e.g., fevers, pain, rash, arthritis)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2mL per 28 days.**
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient have a diagnosis of gout flares (ICD-10 Group M10) and meet **ALL** of the following criteria?
- The patient has shown improvement of gout flares while on Ilaris
- Therapy is prescribed by or in consultation with a rheumatologist
- Ilaris will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of gout flares

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1mL per 84 days.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CANAKINUMAB (Ilaris)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Adult-Onset Still's Disease (AOSD: an autoinflammatory disease)
- Systemic juvenile idiopathic arthritis (SJIA: a type of joint condition)
- Gout flares (episodes of pain or swelling associated with a type of joint condition)

(Renewal denial text continued on next page)

CANAKINUMAB

RENEWAL CRITERIA (CONTINUED)

If you have Adult-Onset Still's Disease, renewal also requires:
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic (such as Kineret [anakinra]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Adult-Onset Still's Disease (an autoinflammatory disease)
- You have maintained or improved systemic inflammatory disease (such as fevers, pain, rash, arthritis [a type of joint condition]) or you have achieved a reduction (decrease) in your corticosteroid (such as prednisone) dose
- Your disease is still clinically active (remission [reduction or disappearance of the signs and symptoms of a disease] has not been attained) OR discontinuing therapy will be harmful for you
- You have tried or have a contraindication to (harmful for you to use) the preferred medication: Kineret (anakinra)

If you have systemic juvenile idiopathic arthritis, renewal also requires:
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic (such as Actemra [tocilizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of systemic juvenile idiopathic arthritis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the following preferred medication: Tyenne (tocilizumab-aazg)
- You meet ONE of the following:
  - You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
  - You have maintained or improved systemic inflammatory disease (such as fevers, pain, rash, arthritis [a type of joint condition])

If you have gout flares, renewal also requires:
- You have shown improvement of gout flares while on Ilaris
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Ilaris concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of gout flares (episodes of pain or swelling associated with a type of joint condition)

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

CAPECITABINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CAPECITABINE	XELODA, CAPECITABINE	18385		GPI-10 (2130000500)	

GUIDELINES FOR USE

Does the patient have a diagnosis of Stage III colon cancer (ICD-10 Group C18) **AND** meet the following criterion?
The requested medication will be used as adjuvant treatment

If yes, **approve for 12 months by HICL or GPI-10 for 8 fills.**
If no, continue to #2.

Does the patient have a diagnosis of locally advanced rectal cancer (ICD-10 C20) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The requested medication will be used as perioperative treatment
The requested medication will be used as part of chemoradiotherapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Does the patient have a diagnosis of unresectable or metastatic colorectal cancer (ICD-10 C19)?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #4.

Does the patient have a diagnosis of advanced or metastatic breast cancer (ICD-10 C79.81, Group C50) and meet **ONE** of the following criteria?
The requested medication will be used as a single agent if an anthracycline- or taxane-containing chemotherapy is not indicated
The requested medication will be used in combination with docetaxel after disease progression on prior anthracycline-containing chemotherapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #5.

Does the patient have a diagnosis of unresectable or metastatic gastric, esophageal, or gastroesophageal junction cancer (ICD-10 Groups C15, C16) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The requested medication will be used as part of a combination chemotherapy regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #6.

CAPECITABINE

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of HER2-overexpressing metastatic gastric or gastroesophageal junction adenocarcinoma (ICD-10 Group C16) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient has not received prior treatment for metastatic disease
The requested medication will be used as part of a combination regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient have a diagnosis of pancreatic adenocarcinoma (ICD-10 Group C25) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The requested medication will be used as adjuvant treatment
The requested medication will be used as part of a combination chemotherapy regimen

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CAPECITABINE (Xeloda)** requires the following rule(s) to be met for approval:
You have ONE of the following:
- Stage III colon cancer (the cancer that has spread to lymph nodes)
- Locally advanced rectal cancer (cancer that has spread from where it started to nearby tissue or lymph nodes)
- Unresectable (unable to remove by surgery) or metastatic colorectal cancer (a type of digestive cancer that has spread to other parts of the body)
- Metastatic breast cancer (the cancer that has spread to other parts of the body)
- Unresectable or metastatic gastric, esophageal, or gastroesophageal junction cancer (a type of digestive system cancer that has spread to other parts of the body)
- HER2 (a type of protein)-overexpressing metastatic gastric or gastroesophageal junction adenocarcinoma (a type of digestive system cancer that has spread to other parts of the body)
- Pancreatic adenocarcinoma (a type of cancer of the pancreas)

If you have Stage III colon cancer, approval also requires:
The requested medication will be used as adjuvant (add-on) treatment
(Denial text continued on next page)

CAPECITABINE

GUIDELINES FOR USE (CONTINUED)

If you have locally advanced rectal cancer, approval also requires:
- You are 18 years of age or older
- The requested medication will be used as perioperative (the time before and after surgery) treatment
- The requested medication will be used as part of chemoradiotherapy (a type of cancer treatment)

If you have advanced or metastatic breast cancer, approval also requires ONE of the following:
- The requested medication will be used as a single agent (used alone) if an anthracycline (such as doxorubicin, daunorubicin)- or taxane (such as paclitaxel, docetaxel)-containing chemotherapy is not indicated
- The requested medication will be used in combination with docetaxel after disease progression (worsens) on prior anthracycline (such as doxorubicin, daunorubicin)-containing chemotherapy

If you have unresectable or metastatic gastric, esophageal, or gastroesophageal junction cancer, approval also requires:
- You are 18 years of age or older
- The requested medication will be used as part of a combination chemotherapy (drugs used to treat cancer) regimen

If you have HER2-overexpressing metastatic gastric or gastroesophageal junction adenocarcinoma, approval also requires:
- You are 18 years of age or older
- You have not received prior treatment for metastatic disease
- The requested medication will be used as part of a combination regimen (such as with cisplatin, trastuzumab)

If you have pancreatic adenocarcinoma, approval also requires:
- You are 18 years of age or older
- The requested medication will be used as adjuvant (add-on) treatment
- The requested medication will be used as part of a combination chemotherapy regimen (such as with gemcitabine)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CAPIVASERTIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CAPIVASERTIB	TRUQAP	49313		GPI-10 (2153032000)	

GUIDELINES FOR USE

Does the patient have a diagnosis of locally advanced or metastatic breast cancer (ICD-10 C79.81, Group C50) and meet **ALL** of the following criteria?
Truqap will be used in combination with Faslodex (fulvestrant)
The patient's cancer is hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, with one or more PIK3CA/AKT1/PTEN-alterations as detected by an FDA-approved test
The patient has disease progression on or after an endocrine-based regimen (e.g., letrozole, anastrozole, tamoxifen)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #64 per 28 days.**
If no, continue to #2.

Does the patient have a diagnosis of metastatic androgen pathway modulation-naive or -sensitive (mAPMN/S) prostate cancer (ICD-10 C61, Z19.1) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
Truqap will be used in combination with abiraterone (Zytiga) and prednisone
The cancer is PTEN-deficient as detected by an FDA-authorized test

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #64 per 28 days.**
If no, continue to #3.

Is the request for a currently approved US Food and Drug Administration (FDA) indication as listed in the recent manufacturer prescribing information document? (see FDA website for approved drugs indications: https://www.accessdata.fda.gov/scripts/cder/daf/index.cfm)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #64 per 28 days.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

CAPIVASERTIB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: Our guideline named **CAPIVASERTIB (Truqap)** requires the following rule(s) be met for approval:

You have ONE of the following:

- Locally advanced or metastatic breast cancer (breast cancer that has spread to nearby tissue or lymph nodes or to other parts of the body)
- Metastatic androgen pathway modulation-naive or -sensitive (mAPMN/S) prostate cancer (cancer that has spread to other parts of the body and has not been treated with, or may respond to, testosterone-lowering treatment)
- A currently approved US Food and Drug Administration (FDA) indication as listed in the recent manufacturer prescribing information document

If you have locally advanced or metastatic breast cancer, approval also requires:

- Truqap will be used together with Faslodex (fulvestrant)
- Your breast cancer is hormone receptor (HR: a type of protein)-positive, human epidermal growth factor receptor 2 (HER2: a type of protein)-negative, with one or more PIK3CA/AKT1/PTEN-mutations (abnormal changes in a type of gene) as detected by a Food and Drug Administration (FDA)-approved test
- You have experienced disease progression (worsening) on or after an endocrine (hormone)-based regimen (such as letrozole, anastrozole, tamoxifen)

If you have metastatic androgen pathway modulation-naive or -sensitive prostate cancer, approval also requires:

- You are 18 years of age or older
- Truqap will be used in combination with abiraterone (Zytiga) and prednisone
- Your prostate cancer is PTEN-deficient (loss of a type of gene) as detected by a Food and Drug Administration (FDA)-authorized test

---

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CAPLACIZUMAB-YHDP

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CAPLACIZUMAB-YHDP	CABLIVI	45591		GPI-10 (8515102080)	

GUIDELINES FOR USE

Does the patient have a diagnosis of acquired thrombotic thrombocytopenia purpura (aTTP) (ICD- 10 Group M31.1) and meet **ALL** of the following criteria?
The patient is 12 years of age or older
Therapy is prescribed by or in consultation with a hematologist

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Has the patient experienced more than TWO recurrences of aTTP while on Cablivi therapy (i.e., new drop in platelet count requiring repeat plasma exchange during 30 days post-plasma exchange therapy [PEX] and up to 28 days of extended therapy)?

If yes, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

If no, continue to #3.

Is the request for continuation of Cablivi therapy from an inpatient (hospital) setting **AND** the patient meets the following criterion?
Cablivi was previously initiated as part of an FDA-approved treatment regimen in combination with plasma exchange and immunosuppressive therapy within the inpatient setting

If yes, **approve for 1 month by HICL or GPI-10 for a maximum quantity of #30 vials.**
If no, continue to #4.

Is the request for continuation of Cablivi therapy after the initial 30-day treatment course (e.g., with no break in therapy) and the patient meets **ALL** of the following criteria?
The patient is receiving immunosuppressive therapy
The patient is experiencing signs of persistent underlying disease (e.g., suppressed ADAMTS13 [also known as von Willebrand factor-cleaving protease (VWFCP)] activity level remains present)

If yes, **approve for 1 month by HICL or GPI-10 for a maximum quantity of #28 vials.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CAPLACIZUMAB-YHDP

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CAPLACIZUMAB-YHDP (Cablivi)** requires the following rule(s) be met for approval:
You have acquired thrombotic thrombocytopenia purpura (aTTP: a type of blood disorder)
You are 12 years of age or older
Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
You have NOT experienced more than TWO recurrences of acquired thrombotic thrombocytopenia purpura (aTTP: a type of blood disorder) while on Cablivi therapy. Recurrences include a new drop in platelet (type of blood cell) count requiring repeat plasma exchange during 30 days post-plasma exchange therapy (PEX: filtering of blood) and up to 28 days of extended therapy
You also meet ONE of the following:
- Your request is for continuation of Cablivi therapy from an inpatient (hospital) setting, AND Cablivi was previously initiated as part of a Food and Drug Administration (FDA)-approved treatment regimen in combination with plasma exchange (filtering of blood) and immunosuppressive therapy (treatment that weakens the immune system) within the inpatient setting
- Your request is for continuation of Cablivi therapy after the initial 30-day treatment course (with no break in therapy) and you meet ALL of the following:
  - You are receiving immunosuppressive therapy
  - You are experiencing signs of persistent underlying disease (such as suppressed ADAMTS13 [also known as von Willebrand factor-cleaving protease (VWFCP): a type of enzyme] activity level remains present)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Cablivi.

CAPMATINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CAPMATINIB HYDROCHLORIDE	TABRECTA	46519		GPI-10 (2153371620)	

GUIDELINES FOR USE

Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's tumor has a mutation that leads to mesenchymal-epithelial transition (MET) exon 14 skipping as detected by an FDA-approved test

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per day.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CAPMATINIB (Tabrecta)** requires the following rule(s) be met for approval:
You have metastatic non-small cell lung cancer (NSCLC: type of lung cancer that has spread to other parts of the body)
You are 18 years of age or older
Your tumor has a mutation that leads to mesenchymal-epithelial transition (MET) exon 14 skipping (an abnormal change in a gene that makes MET protein) as detected by a Food and Drug Administration (FDA)-approved test

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

CARBIDOPA-LEVODOPA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CARBIDOPA/ LEVODOPA	DUOPA		37829	GPI-14 (73209902101820)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of advanced Parkinson's disease (ICD-10 Group G20) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with a neurologist
- The patient is experiencing at least 3 hours of “off” time on current Parkinson’s disease drug treatment
- The patient has demonstrated a clear responsiveness to treatment with levodopa

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ONE** of the following criteria?
- The patient is unable to swallow extended-release tablets or administer extended-release capsules via feeding tube
- The patient has failed to adhere to an oral carbidopa/levodopa regimen or tolerate a feeding tube carbidopa/levodopa regimen

If yes, **approve for 3 months by GPID or GPI-14 with a quantity limit of #100mL per day.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

CARBIDOPA-LEVODOPA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CARBIDOPA-LEVODOPA (Duopa)** requires the following rule be met for approval:
You have advanced Parkinson's disease (a type of movement disorder)
Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
You are experiencing at least 3 hours of “off” time (period of symptoms in between doses) on your current Parkinson’s disease drug treatment (medication for a type of movement disorder)
You have shown a clear responsiveness to treatment with levodopa
You meet ONE of the following:
- You are unable to swallow extended-release tablets or administer extended-release capsules through a feeding tube
- You have failed to adhere to (keep up with) an oral carbidopa/levodopa regimen or tolerate a carbidopa/levodopa regimen through a feeding tube

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

CARBIDOPA-LEVODOPA

RENEWAL CRITERIA

Does the patient have a diagnosis of advanced Parkinson's disease (ICD-10 Group G20) **AND** meet the following criterion?
The patient has experienced improvement in motor symptoms

If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #100mL per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CARBIDOPA-LEVODOPA (Duopa)** requires the following rule(s) be met for renewal:
You have advanced Parkinson's disease (a type of movement disorder)
You have experienced improvement in motor symptoms (ability to move)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

CARGLUMIC ACID

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CARGLUMIC ACID	CARBAGLU CARGLUMIC ACID	25643		GPI-10 (3090823000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of acute or chronic hyperammonemia (HA) due to N-acetylglutamate synthase (NAGS) deficiency (ICD-10 E72.29) **AND** meet the following criterion?
The patient's NAGS gene mutation is confirmed by biochemical or genetic testing

If yes, **approve by HICL or GPI-10 as follows:**
Acute HA due to NAGS deficiency: approve for 7 days.
Chronic HA due to NAGS deficiency: approve for 6 months.

If no, continue to #2.

Does the patient have a diagnosis of acute hyperammonemia (HA) due to propionic acidemia (PA) (ICD-10 E71.121) as confirmed by **ONE** of the following criteria?
The patient has elevated methylcitric acid AND normal methylmalonic acid
The patient had genetic testing confirming mutation in the PCCA or PCCB gene

If yes, **approve for 7 days by HICL or GPI-10.**
If no, continue to #3.

Does the patient have a diagnosis of acute hyperammonemia (HA) due to methylmalonic acidemia (MMA) (ICD-10 E71.120) as confirmed by **ONE** of the following criteria?
The patient has elevated methylmalonic acid and methylcitric acid
The patient had genetic testing confirming mutation in the MMUT, MMA, MMAB or MMADHC genes

If yes, **approve for 7 days by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

CARGLUMIC ACID

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CARGLUMIC ACID (Carbaglu)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Acute or chronic hyperammonemia (HA) due to N-acetylglutamate synthase (NAGS) deficiency (short-term or long-term high ammonia blood levels due to a genetic disorder)
- Acute hyperammonemia (HA) due to propionic acidemia (PA) or methylmalonic acidemia (MMA) (short-term high ammonia blood levels due to a genetic disorder)

If you have acute or chronic hyperammonemia due to N-acetylglutamate synthase deficiency, approval also requires:
- Your N-acetylglutamate synthase gene mutation (abnormal change in gene) is confirmed by biochemical or genetic testing (types of lab tests)

If you have acute hyperammonemia due to propionic acidemia, approval also requires your diagnosis is confirmed by ONE of the following:
- You have elevated methylcitric acid AND normal methylmalonic acid (substances that indicate presence of a disease)
- You had genetic testing confirming mutation in the PCCA or PCCB gene (abnormal changes in types of genes)

If you have acute hyperammonemia due to methylmalonic acidemia, approval also requires your diagnosis is confirmed by ONE of the following:
- You have elevated methylmalonic acid and methylcitric acid (substances that indicate presence of a disease)
- You had genetic testing confirming mutation in the MMUT, MMA, MMAB or MMADHC genes (abnormal changes in types of genes)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

CARGLUMIC ACID

RENEWAL CRITERIA

NOTE: For the diagnoses of acute hyperammonemia (HA) due to N-acetylglutamate synthase (NAGS) deficiency or acute hyperammonemia (HA) due to propionic acidemia (PA) or methylmalonic acidemia (MMA), please refer to the Initial Criteria section.

Does the patient have a diagnosis of chronic hyperammonemia (HA) due to N- acetylglutamate synthase (NAGS) deficiency (ICD-10 E72.29) **AND** meet the following criterion?
The patient has clinical improvement or improved plasma (blood) ammonia levels

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CARGLUMIC ACID (Carbaglu)** requires the following rule(s) be met for renewal:
You have chronic hyperammonemia (HA) due to N-acetylglutamate synthase (NAGS) deficiency (long-term high ammonia blood levels due to a genetic disorder)
You have clinical improvement or improved plasma (blood) ammonia levels

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Carbaglu.

CELECOXIB-VYSCOXA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CELECOXIB	VYSCOXA		58139	GPI-14 (66100525001820)	

GUIDELINES FOR USE

Does the patient have a diagnosis of osteoarthritis (OA) (ICD-10 Groups M15, M16, M17, M18, M19, M47) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- The patient has a contraindication to or is unable to swallow celecoxib capsules
- The patient had a trial of or contraindication to the preferred agent: generic ibuprofen oral liquid formulation

If yes, **approve for 12 months by GPID or GPI-14.**
If no, continue to #2.

Does the patient have a diagnosis of rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- The patient has a contraindication to or is unable to swallow celecoxib capsules
- The patient had a trial of or contraindication to the preferred agent: generic ibuprofen oral liquid formulation

If yes, **approve for 12 months by GPID or GPI-14.**
If no, continue to #3.

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- The patient has a contraindication to or is unable to swallow celecoxib capsules
- The patient had a trial of or contraindication to the preferred agent: generic ibuprofen oral liquid formulation

If yes, **approve for 12 months by GPID or GPI-14.**
If no, continue to #4.

CELECOXIB-VYSCOXA

GUIDELINES FOR USE (CONTINUED)

Does the patient have a diagnosis of juvenile rheumatoid arthritis (JRA) (ICD-10 M08.3; Group M08.0) and meet **ALL** of the following criteria?
The patient is 2 years of age or older
The patient has a contraindication to or is unable to swallow celecoxib capsules
The patient had a trial of or contraindication to the preferred agent: generic ibuprofen oral liquid formulation

If yes, **approve for 12 months by GPID or GPI-14.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CELECOXIB-VYSCOXA** requires the following rule(s) be met for approval:
You have ONE of the following:
Osteoarthritis (OA: type of joint condition)
Rheumatoid arthritis (RA: type of joint condition)
Ankylosing spondylitis (AS: type of joint condition)
Juvenile rheumatoid arthritis (JRA: type of joint condition)
If you have osteoarthritis, approval also requires:
You are 18 years of age or older
You have a contraindication to (harmful for you to use) or are unable to swallow celecoxib capsules
You have tried or have a contraindication to (harmful for you to use) the preferred medication: generic ibuprofen oral liquid formulation
If you have rheumatoid arthritis, approval also requires:
You are 18 years of age or older
You have a contraindication to (harmful for you to use) or are unable to swallow celecoxib capsules
You have tried or have a contraindication to (harmful for you to use) the preferred medication: generic ibuprofen oral liquid formulation
If you have ankylosing spondylitis, approval also requires:
You are 18 years of age or older
You have a contraindication to (harmful for you to use) or are unable to swallow celecoxib capsules
You have tried or have a contraindication to (harmful for you to use) the preferred medication: generic ibuprofen oral liquid formulation
(Denial text continued on next page)

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CEMIPLIMAB-RWLC

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CEMIPLIMAB-RWLC	LIBTAYO	45284		GPI-10 (2135792340)	

GUIDELINES FOR USE

Does the patient have a diagnosis of cutaneous squamous cell carcinoma (CSCC) (ICD-10 C44.02, C44.82, C44.92; Groups C44.12, C44.22, C44.32, C44.42, C44.52, C44.62, C44.72) and meet **ONE** of the following criteria?
The patient's cancer is metastatic or locally advanced AND the patient is not a candidate for curative surgery or curative radiation
The patient's cancer is at high risk of recurrence after surgery and radiation AND Libtayo will be used as adjuvant treatment

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #2.

Does the patient have a diagnosis of metastatic or locally advanced basal cell carcinoma (BCC) (ICD-10 C44.91, C44.01, C44.41, C44.81; Groups C44.11, C44.21, C44.31, C44.51, C44.61, C44.71) **AND** meet the following criterion?
The patient has previously been treated with a hedgehog pathway inhibitor (e.g., Erivedge [vismodegib], Odomzo [sonidegib]) or for whom a hedgehog pathway inhibitor is not appropriate

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Does the patient have a diagnosis of non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
The patient's cancer is metastatic OR locally advanced (where the patient is not a candidate for surgical resection or definitive chemoradiation)
The patient's tumors do not have EGFR, ALK, or ROS1 aberrations

If yes, continue to #4.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

CEMIPLIMAB-RWLC

GUIDELINES FOR USE (CONTINUED)

Does the patient meet **ONE** of the following criteria?

- Libtayo will be used as a single agent AND the patient's tumors have high PD-L1 expression [Tumor Proportion Score (TPS) ≥ 50%], as determined by an FDA-approved test
- Libtayo will be used in combination with platinum-based chemotherapy (e.g., carboplatin, cisplatin)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CEMIPLIMAB-RWLC (Libtayo)** requires the following rules be met for approval:
You have ONE of the following diagnoses:

- Cutaneous squamous cell carcinoma (a type of skin cancer)
- Metastatic or locally advanced basal cell carcinoma (a type of skin cancer that has spread to other parts of the body or to nearby tissue or lymph nodes)
- Non-small cell lung cancer (a type of lung cancer)

If you have cutaneous squamous cell carcinoma, approval also requires ONE of the following:

- Your cancer is metastatic or locally advanced (cancer that has spread to other parts of the body or to nearby tissue or lymph nodes) AND you are not a candidate for curative (to cure) surgery or curative radiation
- Your cancer is at high risk of recurrence (returning) after surgery and radiation AND Libtayo will be used as adjuvant (additional) treatment

If you have metastatic or locally advanced basal cell carcinoma, approval also requires:

- You have previously been treated with a hedgehog pathway inhibitor (such as Erivedge [vismodegib], Odomzo [sonidegib]) or a hedgehog pathway inhibitor is not appropriate for you

(Denial text continued on next page)

CEMIPLIMAB-RWLC

GUIDELINES FOR USE (CONTINUED)

If you have non-small cell lung cancer, approval also requires:

- You are 18 years of age or older
- Your cancer is metastatic (cancer that has spread to other parts of the body) OR locally advanced (cancer that has spread from where it started to nearby tissue or lymph nodes, where you are not a candidate for surgical resection [remove by surgery] or definitive chemoradiation [a type of cancer treatment])
- Your tumors do not have EGFR, ALK or ROS1 aberrations (types of abnormal genes)
- You meet ONE of the following:
  - Libtayo will be used as a single agent AND your tumors has high PD-L1 (programmed death-ligand: type of protein) expression [Tumor Proportion Score (TPS) at least 50%], as determined by a Food and Drug Administration (FDA)- approved test
  - Libtayo will be used in combination with platinum-based chemotherapy (such as carboplatin, cisplatin)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Libtayo.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CENEGERMIN-BKBJ

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CENEGERMIN-BKBJ	OXERVATE	45258		GPI-10 (8677002020)	

GUIDELINES FOR USE

Does the patient have a diagnosis of neurotrophic keratitis (NK) (ICD-10 Group H16.23) and meet **ALL** of the following criteria?
- Therapy is prescribed by or in consultation with an ophthalmologist
- The patient has a medical history supportive of causative etiology for trigeminal nerve damage (e.g., herpes zoster infection, multiple sclerosis, diabetes, ocular surgical damage)
- The patient has loss of corneal sensitivity, corneal epithelium changes, and/or loss of tear production
- The patient is refractory to conservative management (i.e., artificial tears, ocular lubricants, topical antibiotics, therapeutic contact lenses)

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Has the patient previously completed an 8-week course of Oxervate (cenegermin-bkbj) in the affected eye(s) during their lifetime?

If yes, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

If no, **approve for 8 weeks by HICL or GPI-10 with a quantity limit of #28 vials per 14 days for 4 fills.**

DENIAL TEXT: Our guideline named **CENEGERMIN-BKBJ (Oxervate)** requires the following rule(s) be met for approval:
- You have neurotrophic keratitis (an eye disease due to a damaged eye nerve)
- Therapy is prescribed by or in consultation with an ophthalmologist (eye doctor)
- You have a medical history that supports a cause for trigeminal nerve damage (damage to a nerve in the head) (such as herpes zoster infection [shingles virus], multiple sclerosis [type of nerve disorder], diabetes (a disorder with high blood sugar), ocular surgical [eye surgery] damage)
- You have loss of corneal (a part of the eye) sensitivity, corneal epithelium changes, and/or loss of tear production
- You are refractory (not fully responsive) to conservative management (artificial tears, ocular lubricants, topical antibiotics, therapeutic contact lenses)
- You have NOT previously completed an 8-week course of Oxervate (cenegermin-bkbj) in the affected eye(s) during your lifetime

PRIOR AUTHORIZATION GUIDELINES

CERLIPONASE ALFA (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CERLIPONASE ALFA	BRINEURA	44258		GPI-10 (3090902010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of neuronal ceroid lipofuscinosis type 2 (CLN2 disease) (ICD-10 E75.4), also known as tripeptidyl peptidase 1 (TPP1) deficiency, and meet **ALL** of the following criteria?

Therapy is prescribed by or in consultation with a neurologist or pediatric CLN2 specialist
The patient's diagnosis is confirmed by TPP1 enzyme deficiency test or TPP1/CLN2 genotyping
The patient is ambulatory and experiencing symptoms (e.g., instability, intermittent falls, requires assistance to walk, can crawl only)
The patient has a CLN2 Clinical Rating Scale Score of 3 to 5, with a minimum score of 1 in each of the motor and language domains

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 kits per 28 days.** If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CERLIPONASE ALFA (Brineura)** requires the following rule(s) be met for approval:

You have neuronal ceroid lipofuscinosis type 2 (CLN2 disease: a type of genetic disorder), also known as tripeptidyl peptidase 1 (TPP1) deficiency (a type of genetic disorder)
Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) or pediatric (children) CLN2 specialist
Your diagnosis is confirmed by TPP1 enzyme deficiency test or TPP1/CLN2 genotyping (types of lab test)
You are ambulatory (able to walk or crawl) and experiencing symptoms (such as instability [not able to control movement], intermittent (on-and-off) falls, needs help to walk, can crawl only)
You have a CLN2 Clinical Rating Scale Score (a test to measure the severity of ceroid lipofuscinosis type 2) of 3 to 5, with a minimum score of 1 in each of the motor and language category

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CERLIPONASE ALFA (NSA)

RENEWAL CRITERIA

Does the patient meet **ALL** of the following criteria?

The patient has improved or maintained baseline motor function (e.g., ambulation, walking, crawling), or demonstrated a less-than-expected decline in motor function (e.g., ambulation, walking or crawling) from baseline

The patient has a ceroid lipofuscinosis type 2 (CLN2) motor score of at least 1 (e.g., patient is not bedridden or immobile)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 kits per 28 days.**

If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CERLIPONASE ALFA (Brineura)** requires the following rule(s) be met for renewal:

You have improved or maintained baseline (before starting Brineura) motor function (such as ambulation [ability to move], walking, crawling) or demonstrated a less-than-expected decline in motor function (such as ambulation, walking or crawling) from baseline

You have a ceroid lipofuscinosis type 2 (CLN2) motor score (a score to assess severity of symptoms) of at least 1 (such as you are not bedridden [not able to get out of bed] or immobile [not able to move])

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

CERTOLIZUMAB PEGOL

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CERTOLIZUMAB PEGOL	CIMZIA	35554		GPI-10 (5250502010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
The patient is 18 years of age or older
Therapy is prescribed by or in consultation with a rheumatologist
Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine

If yes, continue to #2.
If no, continue to #3.

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #3 kits per 28 days.)**

  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of polyarticular juvenile idiopathic arthritis (pJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient is 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of pJIA

  If yes, continue to #4.
  If no, continue to #5.

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Taltz (ixekizumab)
  - Bimzelx (bimekizumab-bkzx)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #3 kits per 28 days.)**

  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of non-radiographic axial spondyloarthritis (nr-axSpA) (ICD-10 Group M45.A) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Taltz [ixekizumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of nr-axSpA
- The patient had a trial of or contraindication to the clinical standard of care agent: an NSAID (e.g., ibuprofen, naproxen, meloxicam)

  If yes, continue to #10.
  If no, continue to #11.

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient was previously stable on another biologic and is switching to Cimzia
- The patient has C-reactive protein (CRP) levels above the upper limit of normal
- The patient has sacroiliitis on magnetic resonance imaging (MRI)

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #3 kits per 28 days.)**

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist
- The patient has psoriasis covering 3 percent or more of body surface area (BSA) OR psoriatic lesions affecting the hands, feet, genital area, face, or scalp
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

If yes, continue to #12.
If no, continue to #14.

Does the patient meet **ONE** of the following criteria?
- The patient has had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy) for the treatment of PsO
- The patient has a contraindication or intolerance to both clinical standard of care therapies: an immunosuppressant and PUVA (phototherapy) for the treatment of PsO
- The patient is switching from a different biologic (e.g., Humira [adalimumab]), PDE-4 inhibitor (e.g., Otezla [apremilast]), or JAK inhibitor for the same indication

If yes, continue to #13.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Tremfya (guselkumab)
  - Skyrizi (risankizumab-rzaa)
  - Enbrel (etanercept)
  - Otezla (apremilast)
  - Taltz (ixekizumab)
  - Sotyktu (deucravacitinib)
  - Bimzelx (bimekizumab-bkzx)
  - Adalimumab-ryvk/adalimumab-aaty
  - Icotyde (icotrokinra)
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 kits per 28 days.**

  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient have a diagnosis of moderate to severe Crohn's disease (CD) (ICD-10 Group K50) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a gastroenterologist
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of CD

  If yes, continue to #15.
  If no, do not approve.
  DENIAL TEXT: See the initial denial text at the end of the guideline.

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to ONE of the following preferred agents:
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Skyrizi (risankizumab-rzaa)
  - Tremfya (guselkumab)
  - Omvoh (mirikizumab-mrkz)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days. (Please enter a 1 month approval by HICL or GPI-10 with a quantity limit of #3 kits per 28 days.)**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CERTOLIZUMAB PEGOL (Cimzia)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Polyarticular juvenile idiopathic arthritis (pJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Non-radiographic axial spondyloarthritis (nr-axSpA: a type of joint condition)
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Moderate to severe Crohn's disease (CD: a type of bowel disorder)

(Initial denial text continued on next page)

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe rheumatoid arthritis, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)
- You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Adalimumab-ryvk/adalimumab-aaty
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - You have tried a tumor necrosis factor (TNF) inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated that you cannot use a Janus kinase (JAK) inhibitor (such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

(Initial denial text continued on next page)

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

If you have polyarticular juvenile idiopathic arthritis, approval also requires:
- You are 2 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Adalimumab-ryvk/adalimumab-aaty
    - Xeljanz IR (tofacitinib immediate-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

(Initial denial text continued on next page)

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

If you have psoriatic arthritis, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or dermatologist (a type of skin doctor)
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
    - Otezla (apremilast)
    - Tremfya (guselkumab)
    - Skyrizi (risankizumab-rzaa)
    - Taltz (ixekizumab)
    - Bimzelx (bimekizumab-bkzx)
    - Sotyktu (deucravacitinib)
    - Adalimumab-ryvk/adalimumab-aaty
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

If you have ankylosing spondylitis, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: an NSAID (non-steroidal anti-inflammatory drug, such as ibuprofen, naproxen, meloxicam)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Taltz (ixekizumab)
    - Bimzelx (bimekizumab-bkzx)
    - Adalimumab-ryvk/adalimumab-aaty
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

(Initial denial text continued on next page)

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

If you have non-radiographic axial spondyloarthritis, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Taltz [ixekizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of non-radiographic axial spondyloarthritis (a type of joint condition)
- You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: an NSAID (non-steroidal anti-inflammatory drug, such as ibuprofen, naproxen, meloxicam)
- You meet ONE of the following:
  - You were previously stable on another biologic and are switching to Cimzia
  - You have C-reactive protein (CRP: a measure of how much inflammation is in the body) levels above the upper limit of normal
  - You have sacroiliitis (a type of inflammation where lower spine and pelvis connect) on magnetic resonance imaging (MRI: a type of imaging lab)

(Initial denial text continued on next page)

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe plaque psoriasis, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
- You have psoriasis (a type of skin condition) covering 3 percent or more of body surface area (BSA) OR psoriatic lesions (rashes) affecting the hands, feet, genital area, face, or scalp
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)
- You meet ONE of the following:
  - You have had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis (a type of skin condition)
  - You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of medication that decreases the body's immune response) and PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis (a type of skin condition)
  - You are switching from a different biologic (such as Humira [adalimumab]), PDE-4 (phosphodiesterase-4) inhibitor (such as Otezla [apremilast]), or JAK (Janus kinase) inhibitor) for the same indication
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
    - Tremfya (guselkumab)
    - Skyrizi (risankizumab-rzaa)
    - Enbrel (etanercept)
    - Otezla (apremilast)
    - Taltz (ixekizumab)
    - Sotyktu (deucravacitinib)
    - Bimzelx (bimekizumab-bkzx)
    - Adalimumab-ryvk/adalimumab-aaty
    - Icotyde (icotrokinra)

(Initial denial text continued on next page)

CERTOLIZUMAB PEGOL

INITIAL CRITERIA (CONTINUED)

If you have moderate to severe Crohn's disease, approval also requires:

- You are 18 years of age or older
- Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions)
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Crohn's disease (a type of bowel disorder)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications:
    - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
    - Skyrizi (risankizumab-rzaa)
    - Tremfya (guselkumab)
    - Omvoh (mirikizumab-mrkz)
    - Adalimumab-ryvk/adalimumab-aaty
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty])

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA

Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

If yes, continue to #2.
If no, continue to #3.

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
- The patient has tried a TNF inhibitor (e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND the physician has indicated the patient cannot use a JAK inhibitor (e.g., Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality, malignancies, and serious cardiovascular events
  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days.**

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

Does the patient have a diagnosis of polyarticular juvenile idiopathic arthritis (pJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of pJIA

If yes, continue to #4.
If no, continue to #5.

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz (tofacitinib IR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days.**

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
- The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

If yes, continue to #6.
If no, continue to #7.

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Otezla (apremilast)
  - Tremfya (guselkumab)
  - Skyrizi (risankizumab-rzaa)
  - Taltz (ixekizumab)
  - Bimzelx (bimekizumab-bkzx)
  - Sotyktu (deucravacitinib)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])

  [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days.**

  If no, do not approve.
  DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
- The patient has experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) while on therapy
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS

  If yes, continue to #8.
  If no, continue to #9.

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Enbrel (etanercept)
  - Taltz (ixekizumab)
  - Bimzelx (bimekizumab-bkzx)
  - Adalimumab-ryvk/adalimumab-aaty
  - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days.**

  If no, do not approve.
  DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient have a diagnosis of non-radiographic axial spondyloarthritis (nr-axSpA) (ICD-10 Group M45.A) and meet **ALL** of the following criteria?
- The patient has experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) while on therapy
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Taltz [ixekizumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of nr-axSpA

  If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days.**
  If no, continue to #10.

Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
- The patient has achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more while on therapy
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

  If yes, continue to #11.
  If no, continue to #12.

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to TWO of the following preferred agents:
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Tremfya (guselkumab)
  - Skyrizi (risankizumab-rzaa)
  - Enbrel (etanercept)
  - Otezla (apremilast)
  - Taltz (ixekizumab)
  - Sotyktu (deucravacitinib)
  - Bimzelx (bimekizumab-bkzx)
  - Adalimumab-ryvk/adalimumab-aaty
  - Icotyde (icotrokinra)
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

  If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 kits per 28 days.**

  If no, do not approve.
  DENIAL TEXT: See the renewal denial text at the end of the guideline.

Does the patient have a diagnosis of moderate to severe Crohn's disease (CD) (ICD-10 Group K50)
- **AND** meet the following criterion?
- Cimzia will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of CD

  If yes, continue to #13.
  If no, do not approve.
  DENIAL TEXT: See the renewal denial text at the end of the guideline.

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

Does the patient meet **ONE** of the following criteria?
- The patient is pregnant, breastfeeding, or trying to become pregnant
- The patient had a trial of or contraindication to ONE of the following preferred agents:
  - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
  - Skyrizi (risankizumab-rzaa)
  - Tremfya (guselkumab)
  - Omvoh (mirikizumab-mrkz)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty])
  - [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 kit per 28 days.** If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CERTOLIZUMAB PEGOL (Cimzia)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
- Polyarticular juvenile idiopathic arthritis (pJIA: a type of joint condition)
- Psoriatic arthritis (PsA: a type of skin and joint condition)
- Ankylosing spondylitis (AS: a type of joint condition)
- Non-radiographic axial spondyloarthritis (nr-axSpA: a type of joint condition)
- Moderate to severe plaque psoriasis (PsO: a type of skin condition)
- Moderate to severe Crohn's disease (CD: a type of bowel disorder)

If you have moderate to severe rheumatoid arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis (a type of joint condition)

(Renewal denial text continued on next page)

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

You meet ONE of the following:
- You are pregnant, breastfeeding, or trying to become pregnant
- You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
  - Enbrel (etanercept)
  - Adalimumab-ryvk/adalimumab-aaty
  - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
  - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
- You have tried a tumor necrosis factor (TNF) inhibitor (such as adalimumab-ryvk/adalimumab-aaty, Enbrel [etanercept]) AND your physician has indicated that you cannot use a Janus kinase (JAK) inhibitor (such as Rinvoq [upadacitinib], Xeljanz [tofacitinib]) due to the black box warning for increased risk of mortality (death), malignancies (cancer), and serious cardiovascular (heart-related) events

If you have polyarticular juvenile idiopathic arthritis, renewal also requires:
- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis (a type of joint condition)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Adalimumab-ryvk/adalimumab-aaty
    - Xeljanz IR (tofacitinib immediate-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

(Renewal denial text continued on next page)

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

If you have psoriatic arthritis, renewal also requires:

- You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis (a type of skin and joint condition)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
    - Otezla (apremilast)
    - Tremfya (guselkumab)
    - Skyrizi (risankizumab-rzaa)
    - Taltz (ixekizumab)
    - Bimzelx (bimekizumab-bkzx)
    - Sotyktu (deucravacitinib)
    - Adalimumab-ryvk/adalimumab-aaty
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

If you have ankylosing spondylitis, renewal also requires:
- You have experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI: diagnostic test which allows a physician to determine the effectiveness of a current medication) while on therapy
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ankylosing spondylitis (a type of joint condition)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    - Enbrel (etanercept)
    - Taltz (ixekizumab)
    - Bimzelx (bimekizumab-bkzx)
    - Adalimumab-ryvk/adalimumab-aaty
    - Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty, Enbrel])

If you have non-radiographic axial spondyloarthritis, renewal also requires:
- You have experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI: diagnostic test which allows a physician to determine the effectiveness of a current medication) while on therapy
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Taltz [ixekizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of non-radiographic axial spondyloarthritis (a type of joint condition)

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

If you have moderate to severe plaque psoriasis, renewal also requires:

You have achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index: used to measure the severity and extent of psoriasis [a type of skin condition]) of at least 50 percent or more while on therapy

You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)

You meet ONE of the following:

You are pregnant, breastfeeding, or trying to become pregnant

You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:

Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
Tremfya (guselkumab)
Skyrizi (risankizumab-rzaa)
Enbrel (etanercept)
Otezla (apremilast)
Taltz (ixekizumab)
Sotyktu (deucravacitinib)
Bimzelx (bimekizumab-bkzx)
Adalimumab-ryvk/adalimumab-aaty
Icotyde (icotrokinra)

(Renewal denial text continued on next page)

CERTOLIZUMAB PEGOL

RENEWAL CRITERIA (CONTINUED)

If you have moderate to severe Crohn's disease, renewal also requires:
- You will NOT use Cimzia concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of Crohn's disease (a type of bowel disorder)
- You meet ONE of the following:
  - You are pregnant, breastfeeding, or trying to become pregnant
  - You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications:
    - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
    - Skyrizi (risankizumab-rzaa)
    - Tremfya (guselkumab)
    - Omvoh (mirikizumab-mrkz)
    - Adalimumab-ryvk/adalimumab-aaty
    - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty])

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CETUXIMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CETUXIMAB	ERBITUX	25947		GPI-10 (2136001500)	

GUIDELINES FOR USE

Does the patient have a diagnosis of locally or regionally advanced squamous cell carcinoma of the head and neck (SCCHN) (ICD-10 Groups C44.42, C76.0, C00, C06, C09, C10, C32) **AND** meet the following criterion?
Erbitux will be used in combination with radiation therapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #2.

Does the patient have a diagnosis of recurrent locoregional disease or metastatic squamous cell carcinoma of the head and neck (SCCHN) (ICD-10 Groups C44.42, C76.0, C00, C06, C09, C10, C32) **AND** meet the following criterion?
Erbitux will be used in combination with platinum-based therapy (e.g., cisplatin, carboplatin, oxaliplatin) and 5-fluorouracil (5-FU)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

Does the patient have a diagnosis of recurrent or metastatic squamous cell carcinoma of the head and neck (SCCHN) (ICD-10 Groups C44.42, C76.0, C00, C06, C09, C10, C32) **AND** meet the following criterion?
The patient has failed prior platinum-based therapy (e.g., cisplatin, carboplatin, oxaliplatin)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #4.

Does the patient have a diagnosis of metastatic colorectal cancer (mCRC) (ICD-10 C19)?

If yes, continue to #5.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

Will Erbitux be used in combination with Krazati (adagrasib)?

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #6.

CETUXIMAB

GUIDELINES FOR USE (CONTINUED)

Is the patient's cancer KRAS wild-type (without mutation), epidermal growth factor receptor (EGFR)-expressing, as determined by an FDA-approved test, and the patient meets **ONE** of the following criteria?
- Erbitux will be used in combination with FOLFIRI (irinotecan, 5-fluorouracil, leucovorin)
- Erbitux will be used in combination with irinotecan AND the patient is refractory to irinotecan-based chemotherapy
- The patient has failed oxaliplatin-based and irinotecan-based chemotherapy OR the patient is intolerant to irinotecan

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #7.

Does the patient's cancer have a BRAF V600E mutation, as determined by an FDA-approved test, and the patient meets **ALL** of the following criteria?
- The patient is 18 years of age or older
- Erbitux will be used in combination with Braftovi (encorafenib) and fluorouracil-based chemotherapy (e.g., mFOLFOX6, FOLFIRI), OR Erbitux will be used in combination with Braftovi (encorafenib) after prior therapy (e.g., irinotecan)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

CETUXIMAB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CETUXIMAB (Erbitux)** requires the following rule(s) be met for approval:
You have ONE of the following:
- Locally or regionally advanced squamous cell carcinoma of the head and neck (SCCHN: a type of head and neck cancer that has spread from where it started to nearby tissue or lymph nodes)
- Recurrent locoregional disease or metastatic squamous cell carcinoma of the head and neck (SCCHN: a type of head and neck cancer that has returned or has spread to other parts of the body)
- Recurrent or metastatic squamous cell carcinoma of the head and neck (SCCHN: a type of head and neck cancer that has returned or has spread to other parts of the body)
- Metastatic colorectal cancer (mCRC: a type of digestive system cancer that has spread to other parts of the body)

If you have locally or regionally advanced squamous cell carcinoma of the head and neck, approval also requires:
Erbitux will be used in combination with radiation therapy

If you have recurrent locoregional disease or metastatic squamous cell carcinoma of the head and neck, approval also requires:
Erbitux will be used in combination with platinum-based therapy (such as cisplatin, carboplatin, oxaliplatin) and 5-fluorouracil (5-FU)

If you have recurrent or metastatic squamous cell carcinoma of the head and neck, approval also requires:
You have previously failed platinum-based therapy (such as cisplatin, carboplatin, oxaliplatin)

(Denial text continued on next page)

CETUXIMAB

GUIDELINES FOR USE (CONTINUED)

If you have metastatic colorectal cancer (mCRC), approval also requires ONE of the following:

Erbitux will be used in combination with Krazati (adagrasib)

Your cancer is KRAS wild-type (a type of gene with no mutation), epidermal growth factor receptor (EGFR)-expressing, as determined by a Food and Drug Administration (FDA)-approved test, AND you meet ONE of the following:

Erbitux will be used in combination with FOLFIRI (irinotecan, 5-fluorouracil, leucovorin)

Erbitux will be used in combination with irinotecan and you are refractory (resistant) to irinotecan-based chemotherapy

You have failed oxaliplatin-based and irinotecan-based chemotherapy OR you are intolerant to irinotecan

Your cancer has a BRAF V600E mutation (abnormal change in a type of gene), as determined by a Food and Drug Administration (FDA)-approved test, and you meet ALL of the following:

You are 18 years of age or older

You meet ONE of the following:

Erbitux will be used in combination with Braftovi (encorafenib) and fluorouracil-based chemotherapy (such as mFOLFOX6 [fluorouracil, leucovorin and oxaliplatin], FOLFIRI [fluorouracil, leucovorin, and irinotecan])

Erbitux will be used in combination with Braftovi (encorafenib), and you have previously received treatment (such as irinotecan)

RATIONALE

CHENODIOL

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CHENODIOL	CHENODAL, CTEXLI	01364		GPI-10 (5210001000, 5270002100)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have a diagnosis of cerebrotendinous xanthomatosis (CTX) (ICD-10 E75.5)?

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #3 per day.**
If no, continue to #2.

Does the patient have a diagnosis of radiolucent gallstone(s) (ICD-10 Group K80.0) and meet **ALL** of the following criteria?
The patient had a trial of or contraindication to the clinical standard of care agent: ursodiol
The patient has NOT previously received a total duration of chenodiol therapy exceeding 24 months
The request is for Chenodal

If yes, **approve Chenodal for 12 months by NDC (FDB) or GPI-10 with a quantity limit of #7 per day.**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CHENODIOL (Chenodal, Ctexli)** requires the following rule(s) be met for approval:
You have ONE of the following:
Cerebrotendinous xanthomatosis (a type of genetic disorder)
Radiolucent gallstone(s) (hardened deposits of bile in the gall bladder that are barely seen on X-rays [a type of imaging test])
If you have radiolucent gallstone(s), approval also requires:
You have tried or have a contraindication to (harmful for you to use) the clinical standard of care agent: ursodiol
You have NOT previously received chenodiol therapy for more than a total of 24 months
Your request is for Chenodal

CHENODIOL

RENEWAL CRITERIA

Does the patient have a diagnosis of cerebrotendinous xanthomatosis (CTX) (ICD-10 E75.5) and has experienced improvement as defined by **ONE** of the following?
- The patient has normalization of elevated serum or urine bile alcohols
- The patient has normalization of elevated serum cholestanol levels
- The patient has shown improvement in neurologic and psychiatric symptoms (dementia, pyramidal tract and cerebellar signs)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #3 per day.**
If no, continue to #2.

Does the patient have a diagnosis of radiolucent gallstone(s) (ICD-10 Group K80.0) and meet **ALL** of the following criteria?
- The patient has NOT previously received a total duration of chenodiol therapy exceeding 24 months
- The patient has NOT experienced complete or zero gallstone dissolution, as seen on imaging (e.g., oral cholecystogram, ultrasonogram) after 12 months of therapy
- The patient has experienced partial gallstone dissolution, as seen on imaging (e.g., oral cholecystogram, ultrasonogram) after 12 months of therapy
- The request is for Chenodal

If yes, **approve Chenodal for 12 months by NDC (FDB) or GPI-10 with a quantity limit of #7 per day.**

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

CHENODIOL

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CHENODIOL (Chenodal, Ctexli)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- Cerebrotendinous xanthomatosis (a type of genetic disorder)
- Radiolucent gallstone(s) (hardened deposits of bile in the gall bladder that are barely seen on X-rays [a type of imaging test])

If you have cerebrotendinous xanthomatosis, renewal also requires:
- You have experienced improvement as defined by ONE of the following:
  - Normalization of elevated (high levels of) serum (blood) or urine bile alcohols (a type of bile acid)
  - Normalization of elevated (high levels of) serum (blood) cholestanol (a type of fat) levels
  - Improvement in neurologic and psychiatric symptoms (dementia [a type of memory disorder], pyramidal tract [a nerve pathway in the brain] and cerebellar [brain] signs)

If you have radiolucent gallstone(s), renewal also requires:
- You have NOT previously received chenodiol therapy for more than a total of 24 months
- You have NOT experienced complete gallstone dissolution (breaking down) or zero gallstone dissolution, as seen on imaging (such as oral cholecystogram, ultrasonogram [types of imaging tests]) after 12 months of therapy
- You HAVE experienced partial gallstone dissolution (breaking down), as seen on imaging (such as oral cholecystogram, ultrasonogram [types of imaging tests]) after 12 months of therapy
- Your request is for Chenodal

RATIONALE

CHOLIC ACID

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CHOLIC ACID	CHOLBAM	39124		GPI-10 (5270002500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

Does the patient have **ONE** of the following?
A bile acid synthesis disorder
A peroxisomal disorder (Zellweger spectrum disorder) (ICD-10 Group E71.5)

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

Does the patient meet **ALL** of the following criteria?
Therapy is prescribed by or in consultation with a hepatologist or gastroenterologist
The patient exhibits manifestations of liver disease, steatorrhea, or complications from decreased fat-soluble vitamin absorption

If yes, **approve for 3 months by HICL or GPI-10.**
If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CHOLIC ACID (Cholbam)** requires the following rule(s) be met for approval:
You have ONE of the following:
A bile acid synthesis disorder (a type of rare genetic condition)
A peroxisomal disorder (Zellweger spectrum disorder) (a type of rare genetic condition)
Therapy is prescribed by or in consultation with a hepatologist (a type of liver doctor) or gastroenterologist (a doctor who treats digestive conditions)
You show signs or symptoms of liver disease, steatorrhea (excess fat in feces), or complications from your body not being able to absorb fat-soluble vitamins

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

CHOLIC ACID

RENEWAL CRITERIA

Does the patient have **ONE** of the following?
- A bile acid synthesis disorder
- A peroxisomal disorder (Zellweger spectrum disorder) (ICD-10 Group E71.5)

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

Has the patient experienced an improvement in liver function as defined by **ONE** of the following criteria?
- The patient's ALT (alanine aminotransferase) or AST (aspartate transaminase) values have been reduced to less than 50 U/L or the patient's baseline levels have been reduced by 80%
- The patient's total bilirubin values have been reduced to less than 1 mg/dL
- There is no evidence of cholestasis on liver biopsy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CHOLIC ACID (Cholbam)** requires the following rule(s) be met for renewal:
You have ONE of the following:
- A bile acid synthesis disorder (a type of rare genetic condition)
- A peroxisomal disorder (Zellweger spectrum disorder) (a type of rare genetic condition)

You have experienced an improvement in your liver function as defined by ONE of the following:
- Your ALT (alanine aminotransferase: a type of liver enzyme) or AST (aspartate transaminase: a type of liver enzyme) values have been reduced to less than 50 U/L or your baseline (before treatment) levels have been reduced by 80 percent
- Your total bilirubin value (a type of lab test) has been reduced to less than 1 mg/dL
- There is no evidence of cholestasis (condition where bile flow from the liver is reduced/blocked) on liver biopsy (removal of cells or tissue from the body for examination)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CONTINUOUS GLUCOSE MONITORS - STAND-ALONE

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of type 1, type 2, or gestational diabetes (ICD-10 Groups E08, E09, E10, E11, E13, O24.4)?

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient is being treated with insulin (e.g., Humalog [insulin lispro], Lantus [insulin glargine])
   - The patient has a clinical need that cannot be managed with self-monitoring of blood glucose (SMBG) (e.g., frequent hypoglycemia, hypoglycemic unawareness, unable to achieve control of diabetes)

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Is the request for Dexcom G4 or Dexcom G5 (meter, sensor, transmitter) **AND** the patient meets the following criterion?
   - The patient is 2 years of age or older

   If yes, continue to #8.
   If no, continue to #4.

4. Is the request for Guardian Connect (sensor, transmitter) **AND** the patient meets the following criterion?
   - The patient is 14 to 75 years of age

   If yes, continue to #8.
   If no, continue to #5.

5. Is the request for Guardian 3 (sensor, link transmitter), Guardian 4 (sensor, transmitter), Simplera Sensor, or Simplera Sync Sensor **AND** the patient meets the following criterion?
   - The patient is 7 years of age or older

   If yes, continue to #8.
   If no, continue to #6.

CONTINUOUS GLUCOSE MONITORS - STAND-ALONE

INITIAL CRITERIA (CONTINUED)

6. Is the request for Eversense (sensor, smart transmitter), Eversense E3 (sensor, smart transmitter), or Eversense 365 (sensor, transmitter) **AND** the patient meets the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #8.
   If no, continue to #7.

7. Is the request for Minimed Instinct (sensor, receiver) **AND** the patient meets the following criterion?
   - The patient is 2 years of age or older

   If yes, continue to #8.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

CONTINUOUS GLUCOSE MONITORS - STAND-ALONE

INITIAL CRITERIA (CONTINUED)

8. Does the patient meet **ONE** of the following criteria?
   - The patient had a trial of or contraindication to the preferred agent: Dexcom G7
   - The patient had a trial of or contraindication to the preferred agent: Freestyle Libre
   - Dexcom G7 and Freestyle Libre are not compatible with the patient's current insulin pump

   If yes, **approve the requested device for 12 months by NDC as follows:**
   1. **Dexcom G4: approve all of the following:**
      - **Receiver: #1 per 12 months.**
      - **Transmitter: #1 per 180 days.**
      - **Sensor: #4 per 28 days.**
   2. **Dexcom G5: approve all of the following:**
      - **Receiver: #1 per 12 months.**
      - **Transmitter: #1 per 90 days.**
      - **Sensor: #4 per 28 days.**
   3. **Guardian Connect: approve all of the following:**
      - **Transmitter: #1 per 12 months.**
      - **Sensor: #5 per 35 days.**
   4. **Guardian 3: approve all of the following:**
      - **Link Transmitter: #1 per 12 months.**
      - **Sensor: #5 per 35 days.**
   5. **Guardian 4: approve all of the following:**
      - **Transmitter: #1 per 12 months.**
      - **Sensor: #5 per 35 days.**
   6. **Minimed Instinct:**
      - **Receiver: #1 per 12 months.**
      - **Sensor: #2 per 30 days.**
   7. **Simplera Sensor:**
      - **Sensor: #5 per 35 days.**
   8. **Simplera Sync Sensor:**
      - **Sensor: #5 per 35 days.**
   9. **Eversense: approve all of the following:**
      - **Smart transmitter: #1 per 12 months.**
      - **Sensor: #1 per 90 days.**
   10. **Eversense E3: approve all of the following:**
      - **Smart transmitter: #1 per 12 months.**
      - **Sensor: #1 per 180 days.**
   11. **Eversense 365: approve all of the following:**
      - **Transmitter: #1 per 12 months.**
      - **Sensor: #1 per 12 months.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

CONTINUOUS GLUCOSE MONITORS - STAND-ALONE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CONTINUOUS GLUCOSE MONITORS - STAND-ALONE** requires the following rule(s) be met for approval:

A. You have type 1, type 2, or gestational (during pregnancy) diabetes (a disorder with high blood sugar)
B. You have tried or have a contraindication to (harmful for you to use) one of the preferred products: Dexcom G7 or Freestyle Libre, OR both products are not compatible with your current insulin pump
C. You meet ONE of the following:
    1. You are being treated with insulin (such as Humalog [insulin lispro], Lantus [insulin glargine])
    2. You have a clinical need that cannot be managed with self-monitoring of blood glucose (such as frequent hypoglycemia [low blood sugar], hypoglycemic unawareness, unable to achieve control of diabetes)
D. If you are requesting Dexcom G4 or Dexcom G5 system (meter, sensor, transmitter), or Minimed Instinct (sensor, receiver), approval also requires:
    1. You are 2 years of age or older
E. If you are requesting Guardian Connect (sensor, transmitter), approval also requires:
    1. You are 14 to 75 years of age
F. If you are requesting Guardian 3 (sensor, link transmitter), Guardian 4 (sensor, transmitter), Simplera Sensor, or Simplera Sync Sensor, approval also requires:
    1. You are 7 years of age or older
G. If you are requesting Eversense (sensor, smart transmitter), Eversense E3 (sensor, smart transmitter) or Eversense 365 (sensor, transmitter), approval also requires:
    1. You are 18 years of age or older

CONTINUOUS GLUCOSE MONITORS - STAND-ALONE

RENEWAL CRITERIA

1. Does the patient continue to require continuous glucose monitoring?

If yes, **approve the requested device for 12 months by NDC as follows:**

1. **Dexcom G4: approve all of the following:**
   - **Receiver: #1 per 12 months.**
   - **Transmitter: #1 per 180 days.**
   - **Sensor: #4 per 28 days.**
2. **Dexcom G5: approve all of the following:**
   - **Receiver: #1 per 12 months.**
   - **Transmitter: #1 per 90 days.**
   - **Sensor: #4 per 28 days.**
3. **Guardian Connect: approve all of the following:**
   - **Transmitter: #1 per 12 months.**
   - **Sensor: #5 per 35 days.**
4. **Guardian 3: approve all of the following:**
   - **Link Transmitter: #1 per 12 months.**
   - **Sensor: #5 per 35 days.**
5. **Guardian 4: approve all of the following:**
   - **Transmitter: #1 per 12 months.**
   - **Sensor: #5 per 35 days.**
6. **Minimed Instinct:**
   - **Receiver: #1 per 12 months.**
   - **Sensor: #2 per 30 days.**
7. **Simplera Sensor:**
   - **Sensor: #5 per 35 days.**
8. **Simplera Sync Sensor:**
   - **Sensor: #5 per 35 days.**
9. **Eversense: approve all of the following:**
   - **Smart transmitter: #1 per 12 months.**
   - **Sensor: #1 per 90 days.**
10. **Eversense E3: approve all of the following:**
    - **Smart transmitter: #1 per 12 months.**
    - **Sensor: #1 per 180 days.**
11. **Eversense 365: approve all of the following:**
    - **Transmitter: #1 per 12 months.**
    - **Sensor: #1 per 12 months.**

If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CORTICOTROPIN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CORTICOTROPIN	ACTHAR , ACTHAR SELFJECT, CORTROPHIN	02830		GPI-10 (3030001000)	

GUIDELINES FOR USE

1. Is the request for Acthar pre-filled SelfJect or Cortrophin pre-filled syringe for any indication?

   If yes, do not approve.
   Note: Off-label guideline should not be used because these agents haven't demonstrated proven benefits in the other indications and have no proven advantage over synthetic steroids. Therefore, there isn't a pathway to approval for any other listed indications.

   DENIAL TEXT: See the denial text at the end of the guideline.

   If no, continue to #2.

2. Does the patient have a diagnosis of infantile spasms (ICD-10 Group G40.82) **AND** meet the following criterion?
   - The patient is less than 2 years of age

   If yes, **approve Acthar or Cortrophin vial for 28 days by GPID or GPI-14 for #40mL.**
   If no, continue to #3.

3. Is the request for any other indications other than infantile spasms?

   If yes, do not approve. See note below and use the denial text at the end of the guideline.
   Note: Off-label guideline should not be used because these agents haven't demonstrated proven benefits in the other indications and have no proven advantage over synthetic steroids. Therefore, there isn't a pathway to approval for any other listed indications.

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

CORTICOTROPIN

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CORTICOTROPIN (Acthar, Cortrophin)** requires the following rule(s) be met for approval:

A. You have infantile spasms (a type of seizure disorder in infancy and childhood)
B. You are less than 2 years of age
C. Your request is for Acthar or Cortrophin vial

Acthar or Cortrophin vial will not be approved for any other indication other than infantile spasms. Acthar or Cortrophin have not demonstrated proven benefits or advantage over synthetic steroids in the treatment of other indications.

Acthar pre-filled SelfJect or Cortrophin pre-filled syringe will not be approved for infantile spasms (not Food and Drug Administration [FDA]-indicated) or any other indication. Acthar or Cortrophin have not demonstrated proven benefits or advantage over synthetic steroids in the treatment of other indications.

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Acthar Gel or Purified Cortrophin Gel.

CRINECERFONT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CRINECERFONT	CRENESSITY	50097		GPI-10 (3032102000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of classic congenital adrenal hyperplasia (CAH) and meet **ALL** of the following criteria?
   - The patient is 4 years of age or older
   - Therapy is prescribed by or in consultation with an endocrinologist
   - Crenessity will be used as adjunctive treatment with glucocorticoid replacement therapy

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Is the request for Crenessity capsule?

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with the following quantity limits:**
   - **25mg capsule: #3 per day.**
   - **50mg capsule: #3 per day.**
   - **100mg capsule: #4 per day.**

   If no, continue to #3.

3. Is the request for Crenessity solution **AND** the patient meets the following criterion?
   - The patient is unable to swallow Crenessity capsules

   If yes, **approve the solution for 12 months by GPID or GPI-14 with a quantity limit of #8mL per day.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

CRINECERFONT

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CRINECERFONT (Crenessity)** requires the following rule(s) be met for approval:

A. You have classic congenital adrenal hyperplasia (CAH: a type of rare genetic condition)
B. You are 4 years of age or older
C. Therapy is prescribed by or in consultation with an endocrinologist (a type of hormone doctor)
D. Crenessity will be used as adjunctive (additional) treatment with glucocorticoid (a type of steroid medication) replacement therapy
E. If the request is for Crenessity solution, approval also requires:
   1. You are unable to swallow Crenessity capsules

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

CRINECERFONT

RENEWAL CRITERIA

1. Does the patient have a diagnosis of classic congenital adrenal hyperplasia (CAH) **AND** meet the following criterion?
   - The patient has experienced clinical benefit (e.g., decreased androstenedione levels, reduction in glucocorticoid daily dose from baseline, improvement or stabilization in CAH symptoms)

   If yes, **approve all strengths of the requested formulation for 12 months by GPID or GPI-14 with the following quantity limits:**
   - **25mg capsule: #3 per day.**
   - **50mg capsule: #3 per day.**
   - **100mg capsule: #4 per day.**
   - **50mg/mL solution: #8mL per day.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **CRINECERFONT (Crenessity)** requires the following rule(s) be met for renewal:
   A. You have classic congenital adrenal hyperplasia (CAH: a type of rare genetic condition)
   B. You have experienced a clinical benefit (such as decreased androstenedione levels [a type of lab test], reduction in glucocorticoid [a type of steroid medication] daily dose from baseline [before treatment], improvement in or stabilization of congenital adrenal hyperplasia [a type of rare genetic condition] symptoms)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Crenessity.

CRISABOROLE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CRISABOROLE	EUCRISA	43999		GPI-10 (9023002500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of mild to moderate atopic dermatitis (ICD-10 Group L20) and meet **ONE** of the following criteria?
   - The patient had a trial of or contraindication to the clinical standard of care agent: a topical corticosteroid (e.g., triamcinolone 0.1% cream or ointment, mometasone furoate 0.1% ointment, fluocinonide 0.05% cream, halobetasol propionate 0.05% ointment)
   - The patient had a trial of or contraindication to the preferred agent: a topical calcineurin inhibitor (e.g., Elidel [pimecrolimus], Protopic [tacrolimus])

   If yes, **approve for 3 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **CRISABOROLE (Eucrisa)** requires the following rule(s) be met for approval:
   A. You have mild to moderate atopic dermatitis (a type of skin condition)
   B. You meet ONE of the following:
      1. You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: a topical corticosteroid (such as triamcinolone 0.1% cream or ointment, mometasone furoate 0.1% ointment, fluocinonide 0.05% cream, halobetasol propionate 0.05% ointment)
      2. You have tried or have a contraindication to (harmful for you to use) the preferred medication: a topical calcineurin inhibitor (such as Elidel [pimecrolimus], Protopic [tacrolimus])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CRISABOROLE

RENEWAL CRITERIA

1. Does the patient have a diagnosis of mild to moderate atopic dermatitis (ICD-10 Group L20) **AND** meet the following criterion?

- The patient has experienced or maintained improvement in pruritus, relapsing-remitting dermatitis, or facial/interdigital involvement

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CRISABOROLE (Eucrisa)** requires the following rule(s) be met for renewal:

A. You have mild to moderate atopic dermatitis (a type of skin condition)
B. You have experienced or maintained improvement in pruritus (itchiness), relapsing-remitting dermatitis (a type of skin condition that returns and goes away), or facial/interdigital (between the fingers or toes) involvement

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Eucrisa.

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CRIZANLIZUMAB-TMCA (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CRIZANLIZUMAB-TMCA	ADAKVEO	46209		GPI-10 (8280702070)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of sickle cell disease and meet **ALL** of the following criteria?
   - The medication is prescribed by or given in consultation with a hematologist
   - The patient had a trial of or contraindication to hydroxyurea

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Is the patient between the ages of 16 to 17 years old?

   If yes, **approve for 12 months by HICL or GPI-10 for #1 fill every 4 weeks.**
   APPROVAL TEXT: Renewal requires that the patient has maintained or experienced a reduction in acute complications of sickle cell disease (SCD) (e.g., number of sickle cell crises, hospitalizations, acute chest syndrome [ACS]).

   If no, continue to #3.

3. Is the patient 18 years of age or older and meet **ONE** of the following criteria?
   - The patient had at least 2 sickle cell crises in the past year (a sickle cell crises is defined as a visit to an emergency room/medical facility for sickle cell disease-related pain which was treated with a parenterally administered narcotic or parenterally administered ketorolac, the occurrence of acute chest syndrome, priapism, or splenic sequestration)
   - The patient is having sickle cell associated symptoms (e.g., pain or anemia) which are interfering with activities of daily living
   - The patient has a history of or has recurrent acute chest syndrome (ACS)

   If yes, **approve for 12 months by HICL or GPI-10 for #1 fill every 4 weeks.**
   APPROVAL TEXT: Renewal requires that the patient has maintained or experienced a reduction in acute complications of sickle cell disease (SCD) (e.g., number of sickle cell crises, hospitalizations, acute chest syndrome [ACS]).

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CRIZANLIZUMAB-TMCA (Adakveo)** requires the following rule(s) be met for approval:

A. You have sickle cell disease (type of red blood cell disorder)
B. You are at least 16 years old
C. The medication is prescribed by or given in consultation with a hematologist (blood doctor specialist)
D. You have previously tried hydroxyurea, unless there is a medical reason why you cannot (contraindication)
E. If you are 18 years of age or older, approval also requires ONE of the following:
   1. You had at least 2 sickle cell crises in the past year. (A sickle cell crises is defined as a visit to an emergency room/medical facility for sickle cell disease-related pain which was treated with a parenterally administered (given into the vein) narcotic or parenterally administered ketorolac, the occurrence of acute chest syndrome, priapism (prolonged erection of penis), or splenic sequestration [suppressing of spleen])
   2. You are having sickle cell associated symptoms (such as pain or anemia) which are interfering with activities of daily living
   3. You have a history of or have recurrent acute chest syndrome (ACS: chest pain, cough, fever and low oxygen levels)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RENEWAL CRITERIA

1. Does the patient have a diagnosis of sickle cell disease **AND** meet the following criterion?
   - The patient has maintained or experienced a reduction in acute complications of sickle-cell disease (SCD) (e.g., number of sickle cell crises, hospitalizations, acute chest syndrome [ACS])

   If yes, **approve for lifetime by HICL or GPI-10 for #1 fill every 4 weeks.**
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

CRIZOTINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CRIZOTINIB	XALKORI	37916		GPI-10 (2153051700)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #2.
   If no, continue to #4.

2. Does the patient meet **ONE** of the following criteria?
   - The patient's tumor is anaplastic lymphoma kinase (ALK)-positive as detected by an FDA-approved test
   - The patient's tumor is ROS1-positive as detected by an FDA-approved test

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Is the patient unable to swallow capsules?

   If yes, **approve for 12 months by GPID or GPI-14 for all of the following:**
   - **50mg pellet: #4 per day.**
   - **150mg pellet: #2 per day.**

   If no, **approve for 12 months by GPID or GPI-14 for all of the following:**
   - **200mg capsule: #2 per day.**
   - **250mg capsule: #2 per day.**

4. Does the patient have a diagnosis of relapsed or refractory systemic anaplastic large cell lymphoma (ALCL) (ICD-10 Group C84.6) and meet **ALL** of the following criteria?
   - The patient is 1 year of age or older
   - The patient's tumor is anaplastic lymphoma kinase (ALK)-positive

   If yes, continue to #6.
   If no, continue to #5.

CRIZOTINIB

GUIDELINES FOR USE (CONTINUED)

5. Does the patient have a diagnosis of unresectable, recurrent, or refractory inflammatory myofibroblastic tumor (IMT) and meet **ALL** of the following criteria?
   - The patient is 1 year of age or older
   - The patient's tumor is anaplastic lymphoma kinase (ALK)-positive

   If yes, continue to #6.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

6. Is the patient unable to swallow capsules?

   If yes, **approve for 12 months by GPID or GPI-14 for all of the following:**
   - **20mg pellet: #8 per day.**
   - **50mg pellet: #4 per day.**
   - **150mg pellet: #6 per day.**

   If no, **approve for 12 months by GPID or GPI-14 for all of the following:**
   - **200mg capsule: #4 per day.**
   - **250mg capsule: #4 per day.**

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **CRIZOTINIB (Xalkori)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread to other parts of the body)
      2. Relapsed (disease that has returned) or refractory (disease does not respond to treatment), systemic anaplastic large cell lymphoma (ALCL: a type of blood cell cancer)
      3. Unresectable (unable to remove by surgery), recurrent, or refractory (disease does not respond to treatment) inflammatory myofibroblastic tumor (IMT: a rare type of tumor)

   B. If you have metastatic non-small cell lung cancer, approval also requires:
      1. You are 18 years of age or older
      2. Your tumor is anaplastic lymphoma kinase (ALK: a type of enzyme)-positive or ROS1 (a type of gene)-positive as detected by a Food and Drug Administration (FDA)-approved test

   C. If you have relapsed or refractory systemic anaplastic large cell lymphoma, approval also requires:
      1. You are 1 year of age or older
      2. Your tumor is anaplastic lymphoma kinase (ALK: a type of enzyme)-positive

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

CROVALIMAB-AKKZ (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CROVALIMAB-AKKZ	PIASKY	49703		GPI-10 (8580503030)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) (ICD-10 D59.5) and meet **ALL** of the following criteria?
   - The patient is 13 years of age or older
   - The patient weighs at least 40 kgs (88 lbs)
   - Therapy is prescribed by or in consultation with a hematologist
   - The patient has flow cytometry demonstrating at least 2 different GPI-protein deficiencies (e.g., CD55, CD59) on at least 2 cell lineages (e.g., erythrocytes, granulocytes) AND a PNH granulocyte clone size of at least 10 percent
   - The patient has tried and failed (as evidenced by hemoglobin levels less than 10.5 g/dL directly following at least 3 months of stable dosing) or has a contraindication to Ultomiris (ravulizumab-cwvz)
   - Piasky will NOT be used concurrently with C5 complement inhibitor therapy (e.g., Ultomiris [ravulizumab-cwvz], Soliris [eculizumab]), C3 complement inhibitor therapy (e.g., Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

   If yes, **approve for a total of 6 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #18mL per 28 days.**
   - **SECOND APPROVAL: Approve for 5 months with a quantity limit of #6mL per 28 days (Please enter a start date of 3 days BEFORE the end date of the first approval).**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

CROVALIMAB-AKKZ (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **CROVALIMAB-AKKZ (Piasky)** requires the following rule(s) be met for approval:

A. You have paroxysmal nocturnal hemoglobinuria (PNH: a rare blood disorder)
B. You are 13 years of age or older
C. You weigh at least 40 kilograms (88 pounds)
D. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
E. You have flow cytometry (a type of lab test) demonstrating at least 2 different GPI-protein deficiencies (you are missing a certain type of protein, such as CD55, CD59) on at least 2 cell lineages (types of cells, such as erythrocytes [red blood cells], granulocytes [a type of white blood cell]) AND a PNH granulocyte clone size of at least 10 percent
F. You have tried and failed (as shown by hemoglobin [type of protein in red blood cells] levels less than 10.5 g/dL immediately following at least 3 months of stable dosing) or have a contraindication to (harmful for you to use) Ultomiris (ravulizumab-cwvz)
G. You will NOT use Piasky concurrently (at the same time) with C5 complement inhibitor therapy (such as Ultomiris [ravulizumab-cwvz], Soliris [eculizumab]), C3 complement inhibitor therapy (such as Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

CYSTEAMINE BITARTRATE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
CYSTEAMINE BITARTRATE	PROCYSBI		34656 34657 47723 47724	GPI-14 (56400030106520, 56400030106530, 56400030103020, 56400030103040)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of nephropathic cystinosis (ICD-10 E72.04) and meet **ALL** of the following criteria?
   - The patient is 1 year of age or older
   - The patient has tried an immediate-release formulation of cysteamine bitartrate such as Cystagon

   If yes, **approve for 12 months by GPID or GPI-14 for all strengths.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **CYSTEAMINE BITARTRATE (Procysbi)** requires the following rule(s) be met for approval:
   A. You have nephropathic cystinosis (a type of genetic disease)
   B. You are 1 year of age or older
   C. You have tried an immediate-release formulation of cysteamine bitartrate such as Cystagon

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Procysbi.

DABIGATRAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DABIGATRAN ETEXILATE MESELATE	PRADAXA	35604		GPI-10 (8333703020)	DOSAGE FORM = PELET PACK (FDB), PACK (Medi-Span)

GUIDELINES FOR USE

1. Is the request for the treatment of a venous thromboembolic event (VTE) (ICD-10 Groups I82.4, I82.5, I82.62, I82.72, I82.9, I26) **AND** the patient meets the following criterion?
   - The patient has been treated with a parenteral anticoagulation agent for at least 5 days

   If yes, continue to #3.
   If no, continue to #2.

2. Is the request to reduce the risk of venous thromboembolic event (VTE) recurrence **AND** the patient meets the following criterion?
   - The patient has been previously treated

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of guideline.

3. Does the patient meet **ONE** of the following criteria?
   - The patient is 3 months to 7 years of age
   - The patient is 8 to 11 years of age AND unable to swallow dabigatran (Pradaxa) capsules

   If yes, continue to #4.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of guideline.

4. Has the patient had a trial of or contraindication to BOTH of the following preferred agents: rivaroxaban (Xarelto) suspension AND Eliquis (apixaban) sprinkle capsules/tablets oral suspension?

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with a quantity limit of #4 per day.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of guideline.

DABIGATRAN

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DABIGATRAN (Pradaxa)** requires the following rule(s) be met for approval:

A. The request is for ONE of the following:
   1. Treatment of a venous thromboembolic event (VTE: blood clot in the veins)
   2. To reduce the risk of venous thromboembolic event recurrence (happening again)

B. If the request is for the treatment of a venous thromboembolic event, approval also requires:
   1. You have been treated with a parenteral (injected into the vein) anticoagulation medication (type of medication to prevent blood clots) for at least 5 days
   2. You meet ONE of the following:
      a. You are 3 months to 7 years of age
      b. You are 8 to 11 years of age AND are unable to swallow dabigatran (Pradaxa) capsules
   3. You have tried or have a contraindication to (harmful for you to use) BOTH of the following preferred medications: rivaroxaban (Xarelto) suspension AND Eliquis (apixaban) sprinkle capsules/tablets oral suspension

C. If the request is to reduce the risk of venous thromboembolic event recurrence, approval also requires:
   1. You have been previously treated
   2. You meet ONE of the following:
      a. You are 3 months to 7 years of age
      b. You are 8 to 11 years of age AND are unable to swallow dabigatran (Pradaxa) capsules
   3. You have tried or have a contraindication to (harmful for you to use) BOTH of the following preferred medications: rivaroxaban (Xarelto) suspension AND Eliquis (apixaban) sprinkle capsules/tablets oral suspension

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Pradaxa.

PRIOR AUTHORIZATION GUIDELINES

DABRAFENIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DABRAFENIB MESYLATE	TAFINLAR	40360		GPI-10 (2153202510)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of unresectable or metastatic melanoma (ICD-10 Group C43) and meet **ONE** of the following criteria?
   - The patient has a BRAF V600E mutation as detected by an FDA-approved test AND Tafinlar will be used as a single agent
   - The patient has a BRAF V600E or V600K mutation as detected by an FDA-approved test AND Tafinlar will be used in combination with Mekinist (trametinib)

   If yes, continue to #7.
   If no, continue to #2.

2. Does the patient have a diagnosis of melanoma (ICD-10 Group C43) and meet **ALL** of the following criteria?
   - The patient has a BRAF V600E or V600K mutation as detected by an FDA-approved test
   - Tafinlar has not previously been used for more than one year
   - Tafinlar will be used in combination with Mekinist (trametinib) for adjuvant treatment
   - There is involvement of lymph node(s) following complete resection

   If yes, continue to #7.
   If no, continue to #3.

3. Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
   - The patient has a BRAF V600E mutation as detected by an FDA-approved test
   - Tafinlar will be used in combination with Mekinist (trametinib)

   If yes, continue to #7.
   If no, continue to #4.

4. Does the patient have a diagnosis of locally advanced or metastatic anaplastic thyroid cancer (ATC) (ICD-10 C73) and meet **ALL** of the following criteria?
   - The patient has a BRAF V600E mutation
   - Tafinlar will be used in combination with Mekinist (trametinib)
   - The patient has no satisfactory locoregional treatment options available

   If yes, continue to #7.
   If no, continue to #5.

DABRAFENIB

GUIDELINES FOR USE (CONTINUED)

5. Does the patient have a diagnosis of unresectable or metastatic solid tumor and meet **ALL** of the following criteria?
   - The patient is 1 year of age or older
   - The patient has a BRAF V600E mutation
   - Tafinlar will be used in combination with Mekinist (trametinib)
   - The patient's disease has progressed following prior treatment and have no satisfactory alternative treatment options

   If yes, continue to #7.
   If no, continue to #6.

6. Does the patient have a diagnosis of low-grade glioma (LGG) (ICD-10 D33.2) and meet **ALL** of the following criteria?
   - The patient is 1 to 17 years of age
   - The patient has a BRAF V600E mutation
   - Tafinlar will be used in combination with Mekinist (trametinib)
   - The patient requires systemic therapy

   If yes, continue to #7.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

7. Is the request for the capsule formulation?

   If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #4 per day.**
   If no, continue to #8.

8. Is the request for the tablet for oral suspension **AND** the patient meets the following criterion?
   - The patient cannot swallow Tafinlar (dabrafenib) capsules

   If yes, **approve for 12 months by GPID or GPI-14 with a quantity limit of #30 per day.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DABRAFENIB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DABRAFENIB (Tafinlar)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Unresectable or metastatic melanoma (skin cancer that cannot be completely removed by surgery or has spread to other parts of the body)
   2. Melanoma (a type of skin cancer)
   3. Metastatic non-small cell lung cancer (NSCLC: type of lung cancer that has spread to other parts of the body)
   4. Locally advanced or metastatic anaplastic thyroid cancer (ATC: a type of thyroid cancer that has spread from where it started to nearby tissue or lymph nodes, or it has spread to other parts of the body)
   5. Unresectable or metastatic solid tumor (tumor that cannot be completely removed by surgery or has spread to other parts of the body)
   6. Low-grade glioma (LGG: a type of brain cancer)

B. If you have unresectable or metastatic melanoma, approval also requires ONE of the following:
   1. You have a BRAF V600E mutation (type of gene mutation) as detected by a Food and Drug Administration (FDA)-approved test AND Tafinlar will be used as a single agent (by itself)
   2. You have a BRAF V600E or V600K mutation (types of gene mutations) as detected by a Food and Drug Administration (FDA)-approved test AND Tafinlar will be used in combination with Mekinist (trametinib)

C. If you have melanoma, approval also requires:
   1. You have a BRAF V600E or V600K mutation (types of gene mutations) as detected by a Food and Drug Administration (FDA)-approved test
   2. Tafinlar has not previously been used for more than one year
   3. Tafinlar will be used in combination with Mekinist (trametinib) for adjuvant (additional) treatment
   4. There is involvement of lymph node(s) following complete resection (removal by surgery)

D. If you have metastatic non-small cell lung cancer, approval also requires:
   1. You have a BRAF V600E mutation (type of gene mutation) as detected by a Food and Drug Administration (FDA)-approved test
   2. Tafinlar will be used in combination with Mekinist (trametinib)

(Denial text continued on next page)

DABRAFENIB

GUIDELINES FOR USE (CONTINUED)

E. If you have locally advanced or metastatic anaplastic thyroid cancer, approval also requires:
1. You have a BRAF V600E mutation (type of gene mutation)
2. Tafinlar will be used in combination with Mekinist (trametinib)
3. You have no satisfactory locoregional (restricted to a localized region of the body) treatment options available

F. If you have an unresectable or metastatic solid tumor, approval also requires:
1. You are 1 year of age or older
2. You have a BRAF V600E mutation (type of gene mutation)
3. Tafinlar will be used in combination with Mekinist (trametinib)
4. Your disease has progressed following prior treatment and have no satisfactory alternative treatment options

G. If you have low-grade glioma, approval also requires:
1. You are 1 to 17 years of age
2. You have a BRAF V600E mutation (type of gene mutation)
3. Tafinlar will be used in combination with Mekinist (trametinib)
4. You require systemic therapy (treatment that targets the entire body)

H. If the request is for the tablet for oral suspension, approval also requires:
1. You cannot swallow Tafinlar (dabrafenib) capsules

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Tafinlar.

DANICOPAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DANICOPAN	VOYDEYA	49483		GPI-10 (8580852000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) (ICD-10 D59.5) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a hematologist
   - Voydeya will be used for the treatment of extravascular hemolysis (EVH)
   - The patient has anemia (Hgb level less than or equal to 9.5 g/dL) with an absolute reticulocyte count of at least 120 x 10^9/L
   - The patient has flow cytometry demonstrating at least 2 different GPI-protein deficiencies (e.g., CD55, CD59) on at least 2 cell lineages (e.g., erythrocytes, granulocytes) AND a PNH granulocyte clone size of at least 10 percent
   - The patient had a trial of or contraindication to the preferred agent: Fabhalta (iptacopan)
   - Voydeya will be used concurrently with C5 complement inhibitor therapy (e.g., Ultomiris [ravulizumab-cwvz], Soliris [eculizumab], Piasky [crovalimab])
   - Voydeya will NOT be used concurrently with C3 complement inhibitor therapy (e.g., Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #6 per day.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DANICOPAN (Voydeya)** requires the following rule(s) be met for approval:
   A. You have paroxysmal nocturnal hemoglobinuria (PNH: a rare blood disorder)
   B. You are 18 years of age or older
   C. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
   D. You will use Voydeya for the treatment of extravascular hemolysis (EVH: break down of blood cells outside of your blood stream)
   E. You have anemia (a hemoglobin [Hgb: a type of protein in red blood cells] level less than or equal to 9.5 g/dL) with an absolute reticulocyte (immature red blood cell) count of at least 120 x 10(9)/L

DANICOPAN

RENEWAL CRITERIA

1. Does the patient have a diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) (ICD-10 D59.5) and meet **ALL** of the following criteria?
   - The patient has experienced a clinical benefit (e.g., improvement in hemoglobin levels) compared to baseline
   - Voydeya will be used concurrently with C5 complement inhibitor therapy (e.g., Ultomiris [ravulizumab-cwvz], Soliris [eculizumab], Piasky [crovalimab])
   - Voydeya will NOT be used concurrently with C3 complement inhibitor therapy (e.g., Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #6 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DANICOPAN (Voydeya)** requires the following rule(s) be met for renewal:
   A. You have paroxysmal nocturnal hemoglobinuria (PNH: a rare blood disorder)
   B. You have experienced a clinical benefit (such as an improvement in hemoglobin [Hgb: a type of protein in red blood cells] levels) compared to baseline (before you started treatment)
   C. You will use Voydeya concurrently (at the same time) with C5 complement inhibitor therapy (such as Ultomiris [ravulizumab-cwvz], Soliris [eculizumab], Piasky [crovalimab])
   D. You will NOT use Voydeya concurrently (at the same time) with C3 complement inhibitor therapy (such as Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (such as Fabhalta [iptacopan])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Voydeya.

DAPRODUSTAT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DAPRODUSTAT	JESDUVROQ	48668		GPI-10 (8240252000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has been receiving dialysis for at least 4 months
   - Therapy is prescribed by or in consultation with a nephrologist
   - The patient has an eGFR of less than 60 mL/min/1.73m(2) corresponding to stage 3, 4, or 5 chronic kidney disease (CKD)
   - Jesduvroq will NOT be used concurrently with other hypoxia-inducible factor-prolyl hydroxylase inhibitors (HIF-PHIs) (e.g., Vafseo [vadadustat]) OR erythropoiesis-stimulating agents (ESAs) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta])

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Is the patient currently being treated with an erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa])?

   If yes, continue to #4.
   If no, continue to #3.

3. Does the patient have a hemoglobin level of less than 11 g/dL?

   If yes, **approve for 6 months by GPID or GPI-14 for all strengths as follows:**
   - **1mg: #1 per day.**
   - **2mg: #1 per day.**
   - **4mg: #1 per day.**
   - **6mg: #2 per day.**
   - **8mg: #3 per day.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DAPRODUSTAT

INITIAL CRITERIA (CONTINUED)

4. Does the patient meet **ALL** of the following criteria?
   - The patient has a hemoglobin level of less than 12 g/dL
   - The patient will discontinue the erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa]) prior to starting Jesduvroq

   If yes, **approve for 6 months by GPID or GPI-14 for all strengths as follows:**
   - **1mg: #1 per day.**
   - **2mg: #1 per day.**
   - **4mg: #1 per day.**
   - **6mg: #2 per day.**
   - **8mg: #3 per day.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DAPRODUSTAT

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DAPRODUSTAT (Jesduvroq)** requires the following rule(s) be met for approval:

A. You have anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
B. You are 18 years of age or older
C. You have been receiving dialysis (process of removing excess water, toxins from the blood) for at least 4 months
D. Therapy is prescribed by or in consultation with a nephrologist (a type of kidney doctor)
E. You have an estimated glomerular filtration rate (eGFR: a tool for evaluating kidney function) of less than 60 mL/min/1.73m(2), confirming stage 3, 4, or 5 chronic (long-term) kidney disease (CKD)
F. You will NOT use Jesduvroq concurrently (at the same time) with other hypoxia-inducible factor-prolyl hydroxylase inhibitors (HIF-PHIs) (such as Vafseo [vadadustat]) OR erythropoiesis-stimulating agents (ESAs) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta])
G. If you are NOT currently being treated with an erythropoiesis-stimulating agent (ESA: medications used to treat anemia such as Epogen, Procrit), approval also requires:
    1. You have a hemoglobin level (a type of blood test) of less than 11 g/dL
H. If you are currently being treated with an erythropoiesis-stimulating agent (ESA: medications used to treat anemia such as Epogen, Procrit), approval also requires:
    1. You have a hemoglobin level (a type of blood test) of less than 12 g/dL
    2. You will discontinue erythropoiesis-stimulating agent (ESA) therapy (such as Epogen [epoetin alfa], Procrit [epoetin alfa]) before starting Jesduvroq

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DAPRODUSTAT

RENEWAL CRITERIA

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) and meet **ALL** of the following criteria?
   - The patient has a hemoglobin level of at least 10 g/dL OR the patient's hemoglobin level has increased by at least 2 g/dL from their baseline level
   - Jesduvroq will NOT be used concurrently with other hypoxia-inducible factor-prolyl hydroxylase inhibitors (HIF-PHIs) (e.g., Vafseo [vadadustat]) OR erythropoiesis-stimulating agents (ESAs) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta])

   If yes, **approve for 12 months by GPID or GPI-14 for all strengths as follows:**
   - **1mg: #1 per day.**
   - **2mg: #1 per day.**
   - **4mg: #1 per day.**
   - **6mg: #2 per day.**
   - **8mg: #3 per day.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DAPRODUSTAT (Jesduvroq)** requires the following rule(s) be met for renewal:
   A. You have anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
   B. You have a hemoglobin level (a type of blood test) of at least 10 g/dL OR your hemoglobin level has increased by at least 2 g/dL from your baseline level (before treatment)
   C. You will NOT use Jesduvroq concurrently (at the same time) with other hypoxia-inducible factor-prolyl hydroxylase inhibitors (HIF-PHIs) (such as Vafseo [vadadustat]) OR erythropoiesis-stimulating agents (ESAs) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DARATUMUMAB (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DARATUMUMAB	DARZALEX	42814		GPI-10 (2135402700)	

GUIDELINES FOR USE

1. Does the patient have a newly diagnosed multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient is ineligible for autologous stem cell transplant
   - The requested medication will be used in combination with lenalidomide and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of relapsed or refractory multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has received at least one prior therapy
   - The requested medication will be used in combination with lenalidomide and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Does the patient have a newly diagnosed multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient is ineligible for autologous stem cell transplant
   - The requested medication will be used in combination with bortezomib (Velcade), melphalan and prednisone [VMP]

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

4. Does the patient have a newly diagnosed multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient is eligible for autologous stem cell transplant
   - The requested medication will be used in combination with bortezomib (Velcade), thalidomide and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #5.

DARATUMUMAB (NSA)

GUIDELINES FOR USE (CONTINUED)

5. Does the patient have a diagnosis of multiple myeloma and meet **ALL** of the following criteria?
   The patient is 18 years of age or older
   - The patient has received at least one prior therapy
   - The requested medication will be used in combination with bortezomib and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #6.

6. Does the patient have a diagnosis of relapsed or refractory multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has received one to three prior lines of therapy
   - The requested medication will be used in combination with carfilzomib and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #7.

7. Does the patient have a diagnosis of multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has received at least two prior therapies, including lenalidomide and a proteasome inhibitor (PI) [e.g., bortezomib (Velcade), carfilzomib (Kyprolis), ixazomib (Ninlaro)]
   - The requested medication will be used in combination with pomalidomide and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #8.

8. Does the patient have a diagnosis of multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has received at least three prior therapies, including a proteasome inhibitor (PI) [e.g., bortezomib (Velcade), carfilzomib (Kyprolis), ixazomib (Ninlaro)] **AND** an immunomodulatory agent [e.g., lenalidomide (Revlimid), pomalidomide (Pomalyst), thalidomide (Thalomid)]
   - The requested medication will be used as monotherapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #9.

DARATUMUMAB (NSA)

GUIDELINES FOR USE (CONTINUED)

9. Does the patient have a diagnosis of multiple myeloma and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient is refractory to both a proteasome inhibitor (PI) [e.g., bortezomib (Velcade), carfilzomib (Kyprolis), or ixazomib (Ninlaro)] **AND** an immunomodulatory agent [e.g., lenalidomide (Revlimid), pomalidomide (Pomalyst), or thalidomide (Thalomid)]
   - The requested medication will be used as monotherapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DARATUMUMAB (Darzalex)** requires the following rule(s) be met for approval:
   A. You have multiple myeloma (plasma cell cancer)
   B. You are 18 years of age or older
   C. You meet **ONE** of the following criteria:
      1. You have newly diagnosed multiple myeloma and are not eligible for autologous stem cell transplant (cells from your own body) and will receive daratumumab in combination with lenalidomide and dexamethasone
      2. You have relapsed or refractory multiple myeloma (plasma cell cancer that has returned or is not completely responsive to treatment) and received at least one prior therapy **AND** will receive daratumumab in combination with lenalidomide and dexamethasone
      3. You are newly diagnosed with multiple myeloma, not eligible for autologous stem cell transplant (cells from your own body), **AND** will receive daratumumab in combination with bortezomib, melphalan and prednisone
      4. You are newly diagnosed with multiple myeloma, are eligible for autologous stem cell transplant (cells from your own body), **AND** will receive daratumumab in combination with bortezomib, thalidomide and prednisone
      5. You have received at least one prior therapy **AND** will receive daratumumab in combination with bortezomib and dexamethasone
      6. You have relapsed or refractory multiple myeloma (plasma cell cancer that has returned or is not completely responsive to treatment) and received one to three prior lines of therapy **AND** will receive daratumumab in combination with carfilzomib and dexamethasone
      7. You have received at least two prior therapies, including lenalidomide and a proteasome inhibitor (PI: class of drug for myeloma cancer) **AND** will receive daratumumab in combination with pomalidomide and dexamethasone

   (Denial text continued on next page)

DARATUMUMAB (NSA)

GUIDELINES FOR USE (CONTINUED)

8. You have received at least three prior lines of therapy, including a proteasome inhibitor (class of drug for myeloma) and an immunomodulatory agent (drug that changes the immune response or the functioning of the immune system) **AND** you will receive daratumumab as monotherapy (single drug to treat condition)
9. You are refractory (resistant) to both a proteasome inhibitor and an immunomodulatory agent **AND** will receive daratumumab as monotherapy

Note: Proteasome inhibitors examples include: bortezomib, carfilzomib, or ixazomib and Immunomodulatory agent examples include: lenalidomide, pomalidomide, or thalidomide.

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

PRIOR AUTHORIZATION GUIDELINES

DARATUMUMAB-HYALURONIDASE-FIHJ

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DARATUMUMAB-HYALURONIDASE-FIHJ	DARZALEX FASPRO	46509		GPI-10 (2199000215)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of multiple myeloma (ICD-10 Group C90.0) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #2.
   If no, continue to #9.

2. Is the patient newly diagnosed?

   If yes, continue to #3.
   If no, continue to #5.

3. Is the patient ineligible for an autologous stem cell transplant and meets **ONE** of the following criteria?
   - Darzalex Faspro will be used in combination with bortezomib (Velcade), melphalan, and prednisone
   - Darzalex Faspro will be used in combination with lenalidomide (Revlimid) and dexamethasone
   - Darzalex Faspro will be used in combination with bortezomib (Velcade), lenalidomide (Revlimid) and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

4. Is the patient eligible for an autologous stem cell transplant and meets **ONE** of the following criteria?
   - Darzalex Faspro will be used in combination with bortezomib (Velcade), lenalidomide (Revlimid), and dexamethasone for induction and consolidation treatment
   - Darzalex Faspro will be used in combination with bortezomib (Velcade), thalidomide (Thalomid), and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

GUIDELINES FOR USE (CONTINUED)

5. Is the patient's disease relapsed or refractory and the patient meets **ONE** of the following criteria?
   - The patient has received at least one prior therapy, AND Darzalex Faspro will be used in combination with lenalidomide (Revlimid) and dexamethasone
   - The patient has received one to three prior lines of therapy, AND Darzalex Faspro will be used in combination with carfilzomib (Kyprolis) and dexamethasone
   - The patient has received at least one prior line of therapy, including a proteasome inhibitor (e.g., Velcade [bortezomib], Kyprolis [carfilzomib]) and an immunomodulatory agent (e.g., Revlimid [lenalidomide], Pomalyst [pomalidomide]), AND Darzalex Faspro will be used in combination with Tecvayli (teclistamab-cqyv)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #6.

6. Has the patient received at least one prior therapy **AND** meets the following criterion?
   - Darzalex Faspro will be used in combination with bortezomib (Velcade) and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #7.

7. Has the patient received at least one prior line of therapy, including lenalidomide (Revlimid) and a proteasome inhibitor [e.g., bortezomib (Velcade), carfilzomib (Kyprolis), ixazomib (Ninlaro)] **AND** meets the following criterion?
   - Darzalex Faspro will be used in combination with pomalidomide (Pomalyst) and dexamethasone

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #8.

8. Will Darzalex Faspro be used as monotherapy and the patient meets **ONE** of the following criteria?
   - The patient has received at least three prior lines of therapy, including a proteasome inhibitor (e.g., bortezomib [Velcade], carfilzomib [Kyprolis], ixazomib [Ninlaro]) and an immunomodulatory agent (e.g., lenalidomide [Revlimid], pomalidomide [Pomalyst], thalidomide [Thalomid])
   - The patient is refractory to both a proteasome inhibitor (e.g., bortezomib [Velcade], carfilzomib [Kyprolis], ixazomib [Ninlaro]) and an immunomodulatory agent (e.g., lenalidomide [Revlimid], pomalidomide [Pomalyst], thalidomide [Thalomid])
   - The patient has high-risk smoldering multiple myeloma

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

GUIDELINES FOR USE (CONTINUED)

9. Does the patient have newly diagnosed light chain (AL) amyloidosis (ICD-10 E85.81) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Darzalex Faspro will be used in combination with bortezomib (Velcade), cyclophosphamide, and dexamethasone

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DARATUMUMAB-HYALURONIDASE-FIHJ (Darzalex Faspro)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Multiple myeloma (a type of blood cancer)
   2. Newly diagnosed light chain (AL) amyloidosis (a buildup of proteins in the tissues causing organ dysfunction)

B. You are 18 years of age or older

C. If you have multiple myeloma, approval also requires ONE of the following:

   1. Your disease is newly diagnosed and you meet ONE of the following:
      a. You are NOT eligible for an autologous stem cell transplant (a type of procedure to replace damaged bone marrow with cells from your own body) and you meet ONE of the following:
         i. You will use Darzalex Faspro in combination with bortezomib (Velcade), melphalan, and prednisone
         ii. You will use Darzalex Faspro in combination with lenalidomide (Revlimid) and dexamethasone
         iii. You will use Darzalex Faspro in combination with bortezomib (Velcade), lenalidomide (Revlimid) and dexamethasone
      b. You are eligible for an autologous stem cell transplant (a type of procedure to replace damaged bone marrow with cells from your own body) and you meet ONE of the following:
         i. You will use Darzalex Faspro in combination with bortezomib (Velcade), lenalidomide (Revlimid), and dexamethasone for induction (start of treatment) and consolidation treatment (treatment following initial therapy)
         ii. You will use Darzalex Faspro in combination with bortezomib (Velcade), thalidomide (Thalomid), and dexamethasone

(Denial text continued on next page)

CONTINUED ON NEXT PAGE

GUIDELINES FOR USE (CONTINUED)

2. Your disease is relapsed or refractory (disease has returned or did not respond to treatment) and you meet ONE of the following:
   a. You have received at least one prior therapy AND you will use Darzalex Faspro in combination with lenalidomide (Revlimid) and dexamethasone
   b. You have received one to three prior lines of therapy AND you will use Darzalex Faspro in combination with carfilzomib (Kyprolis) and dexamethasone
   c. You have received at least one prior line of therapy, including a proteasome inhibitor (such as Velcade [bortezomib], Kyprolis [carfilzomib]) and an immunomodulatory agent (such as Revlimid [lenalidomide], Pomalyst [pomalidomide]), AND Darzalex Faspro will be used in combination with Tecvayli (teclistamab-cqyv)
3. You have received at least one prior therapy AND you will use Darzalex Faspro in combination with bortezomib (Velcade) and dexamethasone
4. You have received at least one prior line of therapy, including lenalidomide (Revlimid) and a proteasome inhibitor (such as bortezomib [Velcade], carfilzomib [Kyprolis], ixazomib [Ninlaro]), AND you will use Darzalex Faspro in combination with pomalidomide (Pomalyst) and dexamethasone
5. You will use Darzalex Faspro as monotherapy (one drug treatment) and meet ONE of the following:
   a. You have received at least three prior lines of therapy, including a proteasome inhibitor (such as bortezomib [Velcade], carfilzomib [Kyprolis], ixazomib [Ninlaro]) AND an immunomodulatory agent (such as lenalidomide [Revlimid], pomalidomide [Pomalyst], thalidomide [Thalomid])
   b. You are refractory (disease did not respond to treatment) to both a proteasome inhibitor (such as bortezomib [Velcade], carfilzomib [Kyprolis], ixazomib [Ninlaro]) AND an immunomodulatory agent (such as lenalidomide [Revlimid], pomalidomide [Pomalyst], thalidomide [Thalomid])
   c. You have high-risk smoldering multiple myeloma (the stage before active disease)

D. If you have newly diagnosed light chain amyloidosis, approval also requires:

1. You will use Darzalex Faspro in combination with bortezomib (Velcade), cyclophosphamide, and dexamethasone

GUIDELINES FOR USE

1. Does the patient have a diagnosis of metastatic pancreatic adenocarcinoma (ICD-10 Group C25) and meets **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with an oncologist
   - The patient has received at least one prior systemic therapy OR is not a candidate for a multiagent systemic therapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   DENIAL TEXT: Our guideline named **DARAXONRASIB (Rasonque)** requires the following rule(s) be met for approval:
   A. You have metastatic pancreatic adenocarcinoma (a type of pancreas cancer that has spread to other parts of the body)
   B. Therapy is prescribed by or in consultation with an oncologist (a type of cancer doctor)
   C. You have received at least one prior systemic therapy (treatment that targets the entire body) OR you are not a candidate for a multiagent systemic therapy

RATIONALE

DARBEPOETIN ALFA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DARBEPOETIN ALFA IN POLYSORBAT	ARANESP	22890		GPI-10 (8240101510)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) and meet **ALL** of the following criteria?
   - The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
   - The patient's hemoglobin level is less than 10g/dL
   - Aranesp will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **25mcg/mL vial: #4mL per 28 days.**
   - **40mcg/mL vial: #4mL per 28 days.**
   - **60mcg/mL vial: #4mL per 28 days.**
   - **100mcg/mL vial: #4mL per 28 days.**
   - **200mcg/mL vial: #4mL per 28 days.**
   - **10mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **25mcg/0.42mL syringe: #1.68mL per 28 days.**
   - **40mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **60mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **100mcg/0.5mL syringe: #2mL per 28 days.**
   - **150mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **200mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **300mcg/0.6mL syringe: #2.4mL per 28 days.**
   - **500mcg/mL syringe: #4mL per 28 days.**

   If no, continue to #2.

DARBEPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

2. Does the patient have a diagnosis of anemia due to the effect of concomitantly administered cancer chemotherapy (ICD-10 D64.81) and meet **ALL** of the following criteria?
   - The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
   - The patient's hemoglobin level is less than 11g/dL OR the patient's hemoglobin level has decreased at least 2g/dL below baseline level
   - Aranesp will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **25mcg/mL vial: #4mL per 28 days.**
   - **40mcg/mL vial: #4mL per 28 days.**
   - **60mcg/mL vial: #4mL per 28 days.**
   - **100mcg/mL vial: #4mL per 28 days.**
   - **200mcg/mL vial: #4mL per 28 days.**
   - **10mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **25mcg/0.42mL syringe: #1.68mL per 28 days.**
   - **40mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **60mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **100mcg/0.5mL syringe: #2mL per 28 days.**
   - **150mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **200mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **300mcg/0.6mL syringe: #2.4mL per 28 days.**
   - **500mcg/mL syringe: #4mL per 28 days.**

   If no, continue to #3.

DARBEPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

3. Does the patient have a diagnosis of anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa and meet **ALL** of the following criteria?
   - The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
   - The patient's hemoglobin level is less than 10g/dL
   - The patient had a trial of or contraindication to ribavirin dose reduction
   - Aranesp will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 6 months by GPID or GPI-14 for the requested strength as follows:**
   - **25mcg/mL vial: #4mL per 28 days.**
   - **40mcg/mL vial: #4mL per 28 days.**
   - **60mcg/mL vial: #4mL per 28 days.**
   - **100mcg/mL vial: #4mL per 28 days.**
   - **200mcg/mL vial: #4mL per 28 days.**
   - **10mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **25mcg/0.42mL syringe: #1.68mL per 28 days.**
   - **40mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **60mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **100mcg/0.5mL syringe: #2mL per 28 days.**
   - **150mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **200mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **300mcg/0.6mL syringe: #2.4mL per 28 days.**
   - **500mcg/mL syringe: #4mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DARBEPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DARBEPOETIN ALFA (Aranesp)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
   2. Anemia (a type of blood condition) due to the effect of concomitantly administered (given at the same time) cancer chemotherapy (medications used to treat cancer)
   3. Anemia (a type of blood condition) due to hepatitis C (a type of liver infection) combination treatment with ribavirin plus an interferon alfa or peginterferon alfa

B. If you have anemia due to chronic kidney disease, approval also requires:
   1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
   2. Your hemoglobin level (a type of blood test) is less than 10g/dL
   3. You will NOT use Aranesp concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

C. If you have anemia due to the effect of concomitantly administered cancer chemotherapy, approval also requires:
   1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
   2. Your hemoglobin level (a type of blood test) is less than 11g/dL OR your hemoglobin level has decreased at least 2g/dL below your baseline level
   3. You will NOT use Aranesp concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

(Initial denial text continued on next page)

CONTINUED ON NEXT PAGE

DARBEPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

D. If you have anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa, approval also requires:

1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
2. Your hemoglobin level (a type of blood test) is less than 10g/dL
3. You have tried or have a contraindication to (harmful for you to use) a lower ribavirin dose
4. You will NOT use Aranesp concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DARBEPOETIN ALFA

RENEWAL CRITERIA

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) **AND** meet the following criterion?
   - Aranesp will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta] OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, continue to #2.
   If no, continue to #4.

2. Is the patient an adult (18 years of age or older) and meets **ONE** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL if not on dialysis
   - The patient's hemoglobin level is less than 11g/dL if on dialysis
   - The patient's hemoglobin level has reached 10g/dL (if not on dialysis) and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions
   - The patient's hemoglobin level has reached 11g/dL (if on dialysis) and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **25mcg/mL vial: #4mL per 28 days.**
   - **40mcg/mL vial: #4mL per 28 days.**
   - **60mcg/mL vial: #4mL per 28 days.**
   - **100mcg/mL vial: #4mL per 28 days.**
   - **200mcg/mL vial: #4mL per 28 days.**
   - **10mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **25mcg/0.42mL syringe: #1.68mL per 28 days.**
   - **40mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **60mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **100mcg/0.5mL syringe: #2mL per 28 days.**
   - **150mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **200mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **300mcg/0.6mL syringe: #2.4mL per 28 days.**
   - **500mcg/mL syringe: #4mL per 28 days.**

   If no, continue to #3.

DARBEPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

3. Is the request for a pediatric patient (less than 18 years of age) and the patient meets **ONE** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL
   - The patient's hemoglobin level has approached or exceeds 12g/dL and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **25mcg/mL vial: #4mL per 28 days.**
   - **40mcg/mL vial: #4mL per 28 days.**
   - **60mcg/mL vial: #4mL per 28 days.**
   - **100mcg/mL vial: #4mL per 28 days.**
   - **200mcg/mL vial: #4mL per 28 days.**
   - **10mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **25mcg/0.42mL syringe: #1.68mL per 28 days.**
   - **40mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **60mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **100mcg/0.5mL syringe: #2mL per 28 days.**
   - **150mcg/0.3mL syringe: #1.2mL per 28 days.**
   - **200mcg/0.4mL syringe: #1.6mL per 28 days.**
   - **300mcg/0.6mL syringe: #2.4mL per 28 days.**
   - **500mcg/mL syringe: #4mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

DARBEPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DARBEPOETIN ALFA (Aranesp)** requires the following rule(s) be met for renewal:

A. You have ONE of the following:
   1. Anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
   2. Anemia (a type of blood condition) due to the effect of concomitantly administered (given at the same time) cancer chemotherapy (medications used to treat cancer)
   3. Anemia (a type of blood condition) due to hepatitis C (a type of liver infection) combination treatment with ribavirin plus an interferon alfa or peginterferon alfa

B. If you have anemia due to chronic kidney disease, renewal also requires:
   1. You will NOT use Aranesp concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])
   2. If you are an adult (you are 18 years of age or older), renewal also requires ONE of the following:
      a. Your hemoglobin level (a type of blood test) is less than 10g/dL if you are not on dialysis (process of removing excess water, toxins from the blood)
      b. Your hemoglobin level (a type of blood test) is less than 11g/dL if you are on dialysis (process of removing excess water, toxins from the blood)
      c. Your hemoglobin level (a type of blood test) has reached 10g/dL (if you are not on dialysis [process of removing excess water, toxins from the blood]) and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)
      d. Your hemoglobin level (a type of blood test) has reached 11g/dL (if you are on dialysis [process of removing excess water, toxins from the blood]) and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)
   3. If you are a pediatric patient (you are less than 18 years of age), renewal also requires ONE of the following:
      a. Your hemoglobin level (a type of blood test) is less than 10g/dL
      b. Your hemoglobin level (a type of blood test) has approached or exceeds 12g/dL and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)

(Renewal denial text continued on next page)

DARBEPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

C. If you have anemia due to the effect of concomitantly administered cancer chemotherapy, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use Aranesp concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

D. If you have anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use Aranesp concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Epogen [epoetin alfa], Procrit [epoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DAROLUTAMIDE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DAROLUTAMIDE	NUBEQA	45909		GPI-10 (2140242500)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of non-metastatic castration resistant prostate cancer (nmCRPC) (ICD-10 Z19.2, C61) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #3.
   If no, continue to #2.

2. Does the patient have a diagnosis of metastatic castration-sensitive prostate cancer (mCSPC) (ICD-10 Z19.1, C61)?

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Does the patient meet **ONE** of the following criteria?
   - The patient has received a bilateral orchiectomy
   - The patient has a castrate level of testosterone (i.e., less than 50 ng/dL)
   - Nubeqa will be used concurrently with a gonadotropin releasing hormone (GnRH) analog (e.g., Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4 per day.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DAROLUTAMIDE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DAROLUTAMIDE (Nubeqa)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Non-metastatic castration resistant prostate cancer (nmCRPC: prostate cancer that has not spread to other parts of the body and does not respond to hormone therapy)
   2. Metastatic castration-sensitive prostate cancer (mCSPC: prostate cancer that has spread to other parts of the body and responds to hormone therapy)

B. If you have non-metastatic castration resistant prostate cancer, approval also requires:
   1. You are 18 years of age or older
   2. You meet ONE of the following:
      a. You have received a bilateral orchiectomy (both testicles have been surgically removed)
      b. You have a castrate level of testosterone (blood testosterone levels are less than 50 ng/dL)
      c. Nubeqa will be used concurrently (at the same time) with a gonadotropin releasing hormone analog (such as Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

C. If you have metastatic castration-sensitive prostate cancer, approval also requires ONE of the following:
   1. You have received a bilateral orchiectomy (both testicles have been surgically removed)
   2. You have a castrate level of testosterone (blood testosterone levels are less than 50 ng/dL)
   3. Nubeqa will be used concurrently (at the same time) with a gonadotropin releasing hormone analog (such as Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Nubeqa.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DASATINIB-PHYRAGO

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DASATINIB	PHYRAGO	33855		GPI-10 (2153182000)	BRAND = PHYRAGO

GUIDELINES FOR USE

1. Does the patient have a diagnosis of Philadelphia chromosome-positive chronic myeloid leukemia (Ph+ CML) (ICD-10 Group C92.1) **AND** meet the following criterion?
   - The patient has a contraindication to generic dasatinib

   If yes, continue to #2.
   If no, continue to #4.

2. Is the Ph+ CML in chronic phase (CP) and the patient meets **ONE** of the following criteria?
   - The patient is 18 years of age or older AND is newly diagnosed (e.g., starting or previously started treatment with Phyrago at the time of diagnosis)
   - The patient is between 1 and 17 years of age

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with a quantity limit as follows:**
   - **20mg: #3 per day.**
   - **50mg, 70mg, 80mg, 100mg, 140mg: #1 per day.**

   If no, continue to #3.

3. Is the Ph+ CML in chronic, accelerated, myeloid or lymphoid blast phase, and the patient meets **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has a resistance or intolerance to prior therapy including imatinib (Gleevec)
   - The patient had a mutational analysis prior to initiation AND Phyrago is appropriate based on the NCCN guideline table for treatment recommendations based on BCR-ABL1 mutation profile *(Please see header CML-5 of the current NCCN guidelines)*

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with a quantity limit as follows:**
   - **20mg: #3 per day.**
   - **50mg, 70mg, 80mg, 100mg, 140mg: #1 per day.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DASATINIB-PHYRAGO

GUIDELINES FOR USE (CONTINUED)

4. Does the patient have a diagnosis of Philadelphia chromosome-positive acute lymphoblastic leukemia (Ph+ ALL) (ICD-10 Group C91.0) **AND** meet the following criterion?
   - The patient has a contraindication to generic dasatinib

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

5. Is the patient 18 years of age or older **AND** has a resistance or intolerance to prior therapy (e.g., imatinib [Gleevec], nilotinib [Tasigna])?

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with a quantity limit as follows:**
   - **20mg: #3 per day.**
   - **50mg, 70mg, 80mg, 100mg, 140mg: #1 per day.**

   If no, continue to #6.

6. Is the patient between 1 and 17 years of age and meets **ALL** of the following criteria?
   - The patient is newly diagnosed (e.g., starting or previously started treatment with Phyrago at the time of diagnosis)
   - Phyrago will be used in combination with chemotherapy

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with a quantity limit as follows:**
   - **20mg: #3 per day.**
   - **50mg, 70mg, 80mg, 100mg, 140mg: #1 per day.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DASATINIB (Phyrago)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Philadelphia chromosome-positive chronic myeloid leukemia (Ph+ CML: a type of blood cell cancer)
      2. Philadelphia chromosome-positive acute lymphoblastic leukemia (Ph+ ALL: a type of blood cell cancer)

DASATINIB

GUIDELINES FOR USE (CONTINUED)

B. If you have Philadelphia chromosome-positive chronic myeloid leukemia in chronic phase, approval also requires:
1. You have a contraindication to (harmful for you to use) generic dasatinib
2. You meet ONE of the following:
   a. You are 18 years of age or older AND you are newly diagnosed (such as you are starting or previously started treatment with Phyrago at the time your condition was identified)
   b. You are between 1 and 17 years of age

C. If you have Philadelphia chromosome-positive chronic myeloid leukemia in chronic phase, accelerated phase, myeloid or lymphoid blast phase, approval also requires:
1. You are 18 years of age or older
2. You have a contraindication to (harmful for you to use) generic dasatinib
3. You have resistance (medication no longer works) or intolerance (side effect) to prior therapy including imatinib (Gleevec)
4. You had a mutational analysis (a type of lab test) prior to the start of therapy AND Phyrago is appropriate based on the National Comprehensive Cancer Network (NCCN) guideline table for treatment recommendations based on BCR-ABL1 mutation (breakpoint cluster region-Abelson murine leukemia 1: a type of abnormal gene) profile

D. If you have Philadelphia chromosome-positive acute lymphoblastic leukemia, approval also requires:
1. You have a contraindication to (harmful for you to use) generic dasatinib
2. You meet ONE of the following:
   a. You are 18 years of age or older AND have a resistance (medication no longer works) or intolerance (side effect) to prior therapy (such as imatinib [Gleevec], nilotinib [Tasigna])
   b. You are between 1 and 17 years of age; you are newly diagnosed (such as you are starting or previously started treatment with Phyrago at the time your condition was identified); AND you will be using Phyrago in combination with chemotherapy (medications used to treat cancer)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE
For further information, please refer to the Prescribing Information and/or Drug Monograph for Phyrago.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DATOPOTAMAB DERUXTECAN-DLNK

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DATOPOTAMAB DERUXTECAN-DLNK	DATROWAY	50179		GPI-10 (2155102020)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of unresectable or metastatic breast cancer (ICD-10 Group C50) and meet **ONE** of the following criteria?
   - The patient's cancer is hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative (IHC 0, IHC 1+, or IHC 2+/ISH-) AND the patient has received prior endocrine-based therapy (e.g., letrozole, anastrozole, tamoxifen) and chemotherapy for unresectable or metastatic disease
   - The patient's cancer is triple-negative (TNBC) AND the patient is not a candidate for PD-1/PD-L1 inhibitor therapy (e.g., Keytruda [pembrolizumab])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of locally advanced or metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's cancer is epidermal growth factor receptor (EGFR)-mutated
   - The patient has received prior EGFR-directed therapy (e.g., Tagrisso [osimertinib]) and platinum-based chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DATOPOTAMAB DERUXTECAN-DLNK (Datroway)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Unresectable or metastatic breast cancer (a type of breast cancer that cannot be removed by surgery or has spread to other parts of the body)
      2. Locally advanced or metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread from where it started to nearby tissue/lymph nodes or to other parts of the body)

DECITABINE/CEDAZURIDINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DECITABINE/ CEDAZURIDINE	INQOVI	46686		GPI-10 (2199000225)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of myelodysplastic syndromes (MDS) (ICD-10 Group D46) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has an International Prognostic Scoring System group of intermediate-1, intermediate-2, or high-risk

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #5 per 28 days.**
   If no, continue to #2.

2. Does the patient have a diagnosis of chronic myelomonocytic leukemia (CMML) (ICD-10 C93.1) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #5 per 28 days.**
   If no, continue to #3.

3. Does the patient have a diagnosis of acute myeloid leukemia (AML) (ICD-10 Group C92.0) and meet **ALL** of the following criteria?
   - The patient is newly diagnosed (e.g., starting or previously started Inqovi treatment at the time of diagnosis)
   - Inqovi will be used in combination with Venclexta (venetoclax)

   If yes, continue to #4.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

4. Does the patient meet **ONE** of the following criteria?
   - The patient is 75 years of age or older
   - The patient is 18 years of age or older with comorbidities that preclude the use of intensive induction chemotherapy

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #5 per 28 days.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DECITABINE/CEDAZURIDINE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DECITABINE/CEDAZURIDINE (Inqovi)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Myelodysplastic syndromes (MDS: a type of blood cancer)
   2. Chronic myelomonocytic leukemia (CMML: a type of blood cancer)
   3. Acute myeloid leukemia (AML: a type of blood and bone marrow cancer)

B. If you have myelodysplastic syndromes, approval also requires:
   1. You are 18 years of age or older
   2. You have an International Prognostic Scoring System (a tool for evaluating severity of myelodysplastic syndrome) group of intermediate-1, intermediate-2, or high-risk

C. If you have chronic myelomonocytic leukemia, approval also requires:
   1. You are 18 years of age or older

D. If you have acute myeloid leukemia, approval also requires:
   1. You are newly diagnosed (such as you are starting or previously started Inqovi treatment at the time your condition was identified)
   2. Inqovi will be used in combination with Venclexta (venetoclax)
   3. You meet ONE of the following:
      a. You are 75 years of age or older
      b. You are 18 years of age or older with comorbidities (additional diseases) that prevent the use of intensive induction chemotherapy (a type of therapy to treat cancer)

RATIONALE

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DEFERASIROX

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DEFERASIROX	EXJADE, JADENU, JADENU SPRINKLE, DEFERASIROX	33337		GPI-10 (9310002500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of chronic iron overload due to blood transfusions (ICD-10 E83.111) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - Therapy is prescribed by or in consultation with a hematologist or hematologist/oncologist
   - The patient's serum ferritin levels are consistently greater than 1000 mcg/L (at least two lab values in the previous 3 months)

   If yes, continue to #3.
   If no, continue to #2.

2. Does the patient have a diagnosis of thalassemia (ICD-10 Group D56) and meet **ALL** of the following criteria?
   - The patient is 10 years of age or older
   - The patient has chronic iron overload resulting from non-transfusion dependent thalassemia (NTDT)
   - Therapy is prescribed by or in consultation with a hematologist or hematologist/oncologist
   - The patient's serum ferritin levels are consistently greater than 300 mcg/L (at least two lab values in the previous 3 months)
   - The patient's liver iron concentration (LIC) is at least 5 mg Fe/g liver dry weight

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Is the request for Exjade (deferasirox) tablet for oral suspension or Jadenu (deferasirox) tablets?

   If yes, **approve Exjade or Jadenu tablets for all strengths of the requested drug for 6 months by GPID or GPI-14.**

   If no, continue to #4.

CONTINUED ON NEXT PAGE

DEFERASIROX

INITIAL CRITERIA (CONTINUED)

4. Is the request for Jadenu (deferasirox) sprinkle packets **AND** the patient meets the following criterion?
   - The patient has tried one preferred agent: generic deferasirox tablet for oral suspension OR deferasirox tablet

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEFERASIROX (Exjade, Jadenu, Jadenu Sprinkle)** requires the following rule(s) be met for approval:

   A. You have one of the following:
      1. Chronic iron overload (too much iron in the body) due to blood transfusions (blood transfers)
      2. Thalassemia (a type of blood disorder)

   B. If you have chronic iron overload due to blood transfusions, approval also requires:
      1. You are 2 years of age or older
      2. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor) or hematologist/oncologist (a type of blood/cancer doctor)
      3. Your serum ferritin levels (amount of iron-containing blood cell proteins) are regularly greater than 1000 mcg/L (at least two lab values in the previous 3 months)

   C. If you have thalassemia, approval also requires:
      1. You are 10 years of age or older
      2. You have chronic iron overload (too much iron in the body) resulting from non-transfusion dependent thalassemia (NTDT: type of blood disorder that does not require regular blood transfusion)
      3. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor) or hematologist/oncologist (a type of blood/cancer doctor)
      4. Your serum ferritin levels (amount of iron-containing blood cell proteins) are regularly greater than 300 mcg/L (at least two lab values in the previous 3 months)
      5. Your liver iron concentration (LIC) is at least 5 mg of iron per gram (Fe/g) of liver dry weight

   D. If your request is for Jadenu sprinkle packets, approval also requires:
      1. You have tried one preferred medication: generic deferasirox tablet for oral suspension or deferasirox tablet

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DEFERASIROX

RENEWAL CRITERIA

1. Does the patient have a diagnosis of chronic iron overload due to blood transfusions (ICD-10 E83.111) **AND** meet the following criterion?
   - The patient's serum ferritin levels are consistently greater than 500 mcg/L (at least two lab values in the previous 3 months)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of thalassemia (ICD-10 Group D56) and meet **ONE** of the following criteria?
   - The patient's serum ferritin levels are consistently greater than 300 mcg/L (at least two lab values in the previous 3 months)
   - The patient's liver iron concentration (LIC) is at least 3 mg Fe/g liver dry weight (*Liver iron concentration supersedes serum ferritin level when both measurements are available*)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEFERASIROX (Exjade, Jadenu, Jadenu Sprinkle)** requires the following rule(s) be met for renewal:
   A. You have one of the following:
      1. Chronic iron overload (too much iron in the body) due to blood transfusions (blood transfers)
      2. Thalassemia (a type of blood disorder)

   B. If you have chronic Iron overload due to blood transfusions, renewal also requires:
      1. Your serum ferritin levels (type of lab test) are regularly greater than 500 mcg/L (at least two lab values in the previous 3 months)

   C. If you have thalassemia, renewal also requires ONE of the following:
      1. Your serum ferritin levels (type of lab test) are regularly greater than 300 mcg/L (at least two lab values in the previous 3 months)
      2. Your liver iron concentration (LIC) is at least 3 mg of iron per gram (Fe/g) of liver dry weight

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DEFERIPRONE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DEFERIPRONE	FERRIPROX, DEFERIPRONE	18544		GPI-10 (9310002800)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have **ONE** of the following diagnoses?
   - Thalassemia (ICD-10 Group D56)
   - Sickle cell disease (ICD-10 Group D57)
   - Anemia (ICD-10 Group D64)

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient meet **ALL** of the following criteria?
   - The patient has transfusional iron overload
   - Therapy is prescribed by or in consultation with a hematologist or hematologist/oncologist
   - The patient had a trial of or contraindication to at least ONE clinical standard of care agent: Exjade (deferasirox), Jadenu (deferasirox), or Desferal (deferoxamine)

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient meet **ONE** of the following?
   - The patient is experiencing intolerable toxicities or clinically significant adverse effects, or has a contraindication to current chelators: Exjade (deferasirox), Jadenu (deferasirox), or Desferal (deferoxamine)
   - The patient's current chelation therapy (i.e., Exjade [deferasirox], Jadenu [deferasirox], or Desferal [deferoxamine]) is inadequate

   If yes, continue to #4.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DEFERIPRONE

INITIAL CRITERIA (CONTINUED)

4. Does the patient meet **ONE** of the following criteria?
   - The request is for Ferriprox (deferiprone) tablets AND the patient is 8 years of age or older
   - The request is for Ferriprox oral solution AND the patient is 3 years of age or older

   If yes, **approve for 6 months for all strengths of the requested formulation by GPID or GPI-14.**

   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEFERIPRONE (Ferriprox)** requires the following rule(s) be met for approval:

   A. You have ONE of the following:
      1. Thalassemia (a type of blood disorder)
      2. Sickle cell disease (a type of blood disorder)
      3. Anemia (a type of blood disorder)

   B. You have transfusional iron overload (too much iron in the body caused by blood transfusions)

   C. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor) or hematologist/oncologist (a type of blood/cancer doctor)

   D. You have tried or have a contraindication to (harmful for you to use) at least ONE clinical standard of care medication: Exjade (deferasirox), Jadenu (deferasirox), or Desferal (deferoxamine)

   E. You meet ONE of the following:
      1. You are experiencing intolerable toxicities or clinically significant adverse effects, or have a contraindication to (harmful for you to use) current chelators (drugs that bind to iron): Exjade (deferasirox), Jadenu (deferasirox), or Desferal (deferoxamine)
      2. Current chelation therapy (treatment that lowers iron levels) with Exjade [deferasirox], Jadenu [deferasirox], or Desferal [deferoxamine]) is not working well enough

   F. If the request is for Ferriprox (deferiprone) tablets, approval also requires:
      1. You are 8 years of age or older

   G. If the request is for Ferriprox oral solution, approval also requires:
      1. You are 3 years of age or older

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DEFLAZACORT	EMFLAZA, DEFLAZACORT, JAYTHARI, KYMBEE, PYQUVI	11668		GPI-10 (2210001700)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of Duchenne muscular dystrophy (DMD) (ICD-10 G71.01) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist specializing in the treatment of Duchenne muscular dystrophy (DMD) at a DMD treatment center
   - The patient's diagnosis of DMD is confirmed by genetic testing

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Has the patient tried prednisone or prednisolone for at least 6 months?

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DEFLAZACORT

INITIAL CRITERIA (CONTINUED)

3. Did the patient experience a lack of efficacy with prednisone or prednisolone and meets **ALL** of the following criteria?
   - The patient is not in Stage 1 of the disease (the pre-symptomatic phase)
   - Steroid myopathy has been ruled out
   - The patient has experienced deterioration in ambulation, functional status, or pulmonary function while on prednisone or prednisolone that is consistent with advancing disease (stage 2 or higher) and assessed using standard measures over time (e.g., 6-minute walking distance [6MWD], time to ascend/descend 4 stairs, rise from floor time [Gower's maneuver], 10-meter run/walk time, North Star Ambulatory Assessment [NSAA], Physician Global Assessment [PGA], pulmonary function tests [FVC, PFTs], upper limb strength [propelling a wheelchair 30 feet])

   If yes, **approve for 6 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **6mg tablet: #2 per day.**
   - **18mg tablet: #1 per day.**
   - **30mg tablet: #2 per day.**
   - **36mg tablet: #2 per day.**
   - **22.75mg/mL oral suspension: #1.3mL per day.**

   If no, continue to #4.

4. Did the patient experience a significant adverse effect (e.g., weight gain) on prednisone or prednisolone that is negatively impacting a comorbid condition (e.g., diabetes)?

   If yes, **approve for 6 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **6mg tablet: #2 per day.**
   - **18mg tablet: #1 per day.**
   - **30mg tablet: #2 per day.**
   - **36mg tablet: #2 per day.**
   - **22.75mg/mL oral suspension: #1.3mL per day.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DEFLAZACORT

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DEFLAZACORT (Emflaza, Jaythari, Kymbee, Pyquvi)** requires the following rule(s) be met for approval:

A. You have Duchenne muscular dystrophy (DMD: a type of muscle disorder)
B. You are 2 years of age or older
C. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) specializing in the treatment of Duchenne muscular dystrophy (DMD: a type of muscle disorder) at a DMD treatment center
D. Your diagnosis of Duchenne muscular dystrophy (DMD: a type of muscle disorder) is confirmed by genetic testing
E. You have tried prednisone or prednisolone for at least 6 months
F. You meet ONE of the following:
    1. Prednisone or prednisolone did not work for you, and you meet **ALL** of the following:
        a. You are not in Stage 1 of the disease (the pre-symptomatic phase)
        b. There is no steroid myopathy (muscle disease due to steroid use)
        c. You have experienced a decrease in ambulation (walking), functional status, or pulmonary (lung) function, while treated with prednisone or prednisolone, that is consistent with advancing disease (stage 2 or higher) and that is assessed by standard measures over time (such as the 6-minute walking distance [6MWD], time to go up or down 4 stairs, time to rise from the floor [Gower's maneuver], 10-meter run/walk time, North Star Ambulatory Assessment [NSAA: a tool for evaluating Duchenne muscular dystrophy], Physician Global Assessment [PGA: an evaluation by a physician], pulmonary function [forced vital capacity, lung function tests], upper limb strength [moving a wheelchair 30 feet])
    2. You have experienced a significant adverse effect (such as weight gain) on prednisone or prednisolone that is negatively impacting a co-existing comorbid condition (such as diabetes [a disorder with high blood sugar])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

CONTINUED ON NEXT PAGE

DEFLAZACORT

RENEWAL CRITERIA

1. Does the patient have a diagnosis of Duchenne muscular dystrophy (DMD) (ICD-10 G71.01)?

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Is the patient currently ambulatory **AND** meets the following criterion?
   - The patient has shown function or improvement since being on the requested medication, as assessed by a standard set of ambulatory or functional status measures (e.g., 6-minute walking distance [6MWD], time to ascend/descend 4 stairs, rise from floor time [Gower's maneuver], 10-meter run/walk time, North Star Ambulatory Assessment [NSAA], Physician Global Assessment [PGA])

   If yes, **approve for 12 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **6mg tablet: #2 per day.**
   - **18mg tablet: #1 per day.**
   - **30mg tablet: #2 per day.**
   - **36mg tablet: #2 per day.**
   - **22.75mg/mL oral suspension: #1.3mL per day.**

   If no, continue to #3.

3. Is the patient currently non-ambulatory **AND** meets the following criterion?
   - The patient has maintained or demonstrated a less than expected decline in pulmonary function or upper limb strength since being on the requested medication, as assessed by standard measures (e.g., pulmonary function [FVC, PFTs], upper limb strength measures [propelling a wheelchair 30 feet], Physician Global Assessment [PGA])

   If yes, **approve for 12 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **6mg tablet: #2 per day.**
   - **18mg tablet: #1 per day.**
   - **30mg tablet: #2 per day.**
   - **36mg tablet: #2 per day.**
   - **22.75mg/mL oral suspension: #1.3mL per day.**

   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

DEFLAZACORT

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DEFLAZACORT (Emflaza, Jaythari, Kymbee, Pyquvi)** requires the following rule(s) be met for renewal:

A. You have Duchenne muscular dystrophy (DMD: a type of muscle disorder)

B. If you are currently ambulatory (can walk), approval also requires:

1. You have shown function or improvement since being on the requested medication as measured by a standard set of ambulatory or functional status measures (such as the 6-minute walking distance [6MWD], time to go up or down 4 stairs, time to rise from the floor [Gower's maneuver], 10-meter run/walk time, North Star Ambulatory Assessment [NSAA: a tool for evaluating Duchenne muscular dystrophy], Physician Global Assessment [PGA: an evaluation by a physician])

C. If you are currently non-ambulatory (cannot walk), approval also requires:

1. You have maintained or had a less than expected decrease in pulmonary (lung) function or upper limb strength since being on the requested medication as assessed by standard measures (such as pulmonary function [forced vital capacity, pulmonary function tests], upper limb strength measures [moving in a wheelchair 30 feet], Physician Global Assessment [PGA: an evaluation by a physician])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

PRIOR AUTHORIZATION GUIDELINES

DELAFLOXACIN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DELAFLOXACIN MEGLUMINE	BAXDELA		43532	GPI-14 (05000025100320)	

GUIDELINES FOR USE

1. Is therapy prescribed by or in consultation with an Infectious Disease (ID) specialist?

   If yes, **approve for 1 month as follows:**
   - **Acute bacterial skin or skin structure infection (ABSSSI): Approve the 450mg tablet by GPID or GPI-14 with a quantity limit of #28 per 14 days for 1 fill.**
   - **Community-acquired bacterial pneumonia (CABP): Approve the 450mg tablet by GPID or GPI-14 with a quantity limit of #20 per 10 days for 1 fill.**
   - **Other indications: Approve the 450mg tablet by GPID or GPI-14 with a quantity limit of #28 per 14 days for 1 fill.**

   If no, continue to #2.

2. Does the patient have a diagnosis of an acute bacterial skin or skin structure infection (ABSSSI) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's ABSSSI infection is caused by any of the following susceptible microorganisms: *Staphylococcus aureus* (including methicillin-resistant [MRSA] and methicillin-susceptible [MSSA] isolates)*, Staphylococcus haemolyticus*, *Staphylococcus lugdunensis, Streptococcus agalactiae*, *Streptococcus anginosus* Group (including *Streptococcus anginosus, Streptococcus intermedius,* and *Streptococcus constellatus), Streptococcus pyogenes, Enterococcus faecalis, Escherichia coli, Enterobacter cloacae, Klebsiella pneumoniae,* or *Pseudomonas aeruginosa*

   If yes, continue to #3.
   If no, continue to #6.

3. Is Baxdela being used for an animal or human bite, necrotizing fasciitis, diabetic foot infection, decubitus ulcer formation, myonecrosis or ecthyma gangrenosum?

   If yes, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

   If no, continue to #4.

DELAFLOXACIN

GUIDELINES FOR USE (CONTINUED)

4. Has an antimicrobial susceptibility test been performed that meets **ALL** of the following criteria?
   - The results from the infection site culture indicate pathogenic organism(s) with resistance to ONE standard of care agent for acute bacterial skin or skin structure infections (ABSSSI) (e.g., sulfamethoxazole/trimethoprim, levofloxacin, clindamycin, cephalexin, vancomycin)
   - The results from the infection site culture indicate pathogenic organism(s) with susceptibility to Baxdela

   If yes, **approve the 450mg tablet for 1 month by GPID or GPI-14 with a quantity limit of #28 per 14 days for 1 fill.**

   If no, continue to #5.

5. Does the patient meet **ALL** of the following criteria?
   - Antimicrobial susceptibility results are unavailable
   - The patient had a trial of or contraindication to ONE clinical standard of care agent: a gram positive targeting antibiotic (e.g., linezolid, clindamycin, doxycycline, sulfamethoxazole/trimethoprim, vancomycin), a penicillin antibiotic (e.g., amoxicillin), a fluoroquinolone antibiotic (e.g., levofloxacin, ciprofloxacin, moxifloxacin), a cephalosporin antibiotic (e.g., ceftriaxone, cephalexin, cefazolin)

   If yes, **approve the 450mg tablet for 1 month by GPID or GPI-14 with a quantity limit of #28 per 14 days for 1 fill.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

6. Does the patient have a diagnosis of community-acquired bacterial pneumonia (CABP) (ICD-10 J15.9) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's CABP infection is caused by any of the following susceptible microorganisms: *Streptococcus pneumoniae, Staphylococcus aureus (methicillin-susceptible [MSSA] isolates* only*), Klebsiella pneumoniae, Escherichia coli, Pseudomonas aeruginosa, Haemophilus influenzae, Haemophilus parainfluenzae, Chlamydia pneumoniae, Legionella pneumophila* or *Mycoplasma pneumoniae*

   If yes, continue to #7.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DELAFLOXACIN

GUIDELINES FOR USE (CONTINUED)

7. Is the request for continuation of care from an inpatient setting?

   If yes, **approve the 450mg tablet for 1 month by GPID or GPI-14 with a quantity limit of #20 per 10 days for 1 fill.**

   If no, continue to #8.

8. Has an antimicrobial susceptibility test been performed that meets **ALL** of the following criteria?
   - The results from the infection site culture indicate pathogenic organism(s) with resistance to at least TWO standard of care agents for community-acquired bacterial pneumonia (CABP) (e.g., azithromycin, doxycycline, levofloxacin, moxifloxacin, amoxicillin, ceftriaxone, linezolid)
   - The results from the infection site culture indicate pathogenic organism(s) with susceptibility to Baxdela

   If yes, **approve the 450mg tablet for 1 month by GPID or GPI-14 with a quantity limit of #20 per 10 days for 1 fill.**

   If no, continue to #9.

9. Does the patient meet **ALL** of the following criteria?
   - Antimicrobial susceptibility results are unavailable
   - The patient had a trial of or contraindication to at least TWO clinical standard of care agents for CABP (e.g., azithromycin, doxycycline, levofloxacin, moxifloxacin, amoxicillin, ceftriaxone, linezolid)

   If yes, **approve the 450mg tablet for 1 month by GPID or GPI-14 with a quantity limit of #20 per 10 days for 1 fill.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DELAFLOXACIN

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DELAFLOXACIN (Baxdela)** requires the following rule(s) be met for approval:

A. You meet ONE of the following:
   1. Baxdela is prescribed by or in consultation with an infectious disease (ID) specialist (a doctor who specializes in the treatment of infections)
   2. You have an acute bacterial skin or skin structure infection (ABSSSI: a type of skin condition)
   3. You have community-acquired bacterial pneumonia (CABP: a type of lung infection)

B. If you have an acute bacterial skin or skin structure infection, approval also requires:
   1. You are 18 years of age or older
   2. Your infection is caused by any of the following susceptible microorganisms (bacteria that the medication can work on): *Staphylococcus aureus* (including methicillin-resistant [MRSA] *and methicillin-susceptible [MSSA] isolates), Staphylococcus haemolyticus, Staphylococcus lugdunensis, Streptococcus agalactiae, Streptococcus anginosus Group (including Streptococcus anginosus, Streptococcus intermedius, and Streptococcus constellatus), Streptococcus pyogenes, Enterococcus faecalis, Escherichia coli, Enterobacter cloacae, Klebsiella pneumoniae, or Pseudomonas aeruginosa*
   3. You are NOT using Baxdela for an animal or human bite, necrotizing fasciitis (flesh eating disease), diabetic foot infection (infection caused by high blood sugar), decubitus ulcer formation (a type of skin injury), myonecrosis (dead muscle tissue) or ecthyma gangrenosum (a type of skin lesion)
   4. You meet ONE of the following:
      a. Your antimicrobial susceptibility test (lab test that shows what medications work on which bacteria) shows ALL of the following:
         i. The bacteria at the infection site culture is resistant (medication will not work on that bacteria) to ONE standard of care medication for acute bacterial skin or skin structure infections (such as sulfamethoxazole/trimethoprim, levofloxacin, clindamycin, cephalexin, vancomycin)
         ii. Baxdela will work against the bacteria
      b. If an antimicrobial susceptibility test (lab test that shows what medications work on which bacteria) is not available, approval requires you have tried or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a gram positive targeting antibiotic (such as linezolid, clindamycin, doxycycline, sulfamethoxazole/trimethoprim, vancomycin), a penicillin (such as amoxicillin), a fluoroquinolone (such as levofloxacin, ciprofloxacin, moxifloxacin), a cephalosporin (such as ceftriaxone, cephalexin, cefazolin)

(Denial text continued on next page)

DELAFLOXACIN

GUIDELINES FOR USE (CONTINUED)

C. If you have community-acquired bacterial pneumonia, approval also requires:

1. You are 18 years of age or older
2. Your infection is caused by any of the following susceptible microorganisms (bacteria that the medication can work on: Streptococcus pneumoniae, Staphylococcus aureus (methicillin-susceptible [MSSA] isolates only), Klebsiella pneumoniae, Escherichia coli, Pseudomonas aeruginosa, Haemophilus influenzae, Haemophilus parainfluenzae, Chlamydia pneumoniae, Legionella pneumophila or Mycoplasma pneumoniae
3. You meet ONE of the following:
   a. Your request is for continuation of care from an inpatient setting (a healthcare facility where medical treatment is given overnight or longer)
   b. Your antimicrobial susceptibility test (lab test that shows what medications work on which bacteria) shows ALL of the following:
      i. The bacteria at the infection site culture is resistant (medication will not work on that bacteria) to at least TWO standard of care medications for community-acquired bacterial pneumonia (CABP: a type of lung infection) (such as azithromycin, doxycycline, levofloxacin, moxifloxacin, amoxicillin, ceftriaxone, linezolid)
      ii. Baxdela will work against the bacteria
   c. If an antimicrobial susceptibility test (lab test that shows what medications work on which bacteria) is not available, approval requires you have tried or have a contraindication to (harmful for you to use) at least TWO clinical standard of care medications for community-acquired bacterial pneumonia (CABP: a type of lung infection) (such as azithromycin, doxycycline, levofloxacin, moxifloxacin, amoxicillin, ceftriaxone, linezolid)

RATIONALE

DELGOCITINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DELGOCITINIB	ANZUPGO	50242		GPI-10 (9027202000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of moderate to severe chronic hand eczema (CHE) (ICD-10 L30.8, L30.9) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has a modified Investigator's Global Assessment for Chronic Hand Eczema (IGA-CHE) score of 3 or 4
   - The patient had a trial of, or a contraindication to, either the clinical standard of care agent: a topical corticosteroid of medium potency or greater (e.g., triamcinolone 0.1% cream or ointment, mometasone furoate 0.1% ointment, fluocinonide 0.05% cream, halobetasol propionate 0.05% ointment) OR the preferred agent: a topical calcineurin inhibitor (e.g., Elidel [pimecrolimus], Protopic [tacrolimus])
   - The patient had a trial of or contraindication to TWO of the following preferred agents: Eucrisa (crisaborole), Opzelura (ruxolitinib), Zoryve (roflumilast) 0.15% cream, Vtama (tapinarof)

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Will Anzupgo be used concurrently with **ANY** of the following for the treatment of atopic dermatitis?
   - Other non-steroidal topicals (e.g., calcineurin inhibitors [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)], PDE-4 inhibitors [e.g., Eucrisa (crisaborole), Zoryve (roflumilast)], JAK inhibitors [e.g., Opzelura (ruxolitinib)], AhR agonists [e.g., Vtama (tapinarof)])
   - Systemic therapeutic biologics (e.g., Dupixent [dupilumab], Adbry [tralokinumab-ldrm])
   - Other JAK inhibitors (e.g., Rinvoq [upadacitinib], Cibinqo [abrocitinib])
   - Potent immunosuppressants (e.g., azathioprine, cyclosporine)

   If yes, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

   If no, **approve for 4 months by HICL or GPI-10.**

DELGOCITINIB

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DELGOCITINIB (Anzupgo)** requires the following rule(s) be met for approval:

A. You have moderate to severe chronic hand eczema (CHE: a type of skin condition)
B. You are 18 years of age or older
C. You have a modified Investigator's Global Assessment for Chronic Hand Eczema (IGA-CHE: a tool for evaluating the severity of your condition) score of 3 or 4
D. You have tried, or have a contraindication to (harmful for you to use), either the clinical standard of care medication: a topical corticosteroid of medium potency or greater (such as triamcinolone 0.1% cream or ointment, mometasone furoate 0.1% ointment, fluocinonide 0.05% cream, halobetasol propionate 0.05% ointment) OR the preferred medication: a topical calcineurin inhibitor (such as Elidel [pimecrolimus], Protopic [tacrolimus])
E. You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications: Eucrisa (crisaborole), Opzelura (ruxolitinib), Zoryve (roflumilast) 0.15% cream, Vtama (tapinarof)
F. You will NOT use Anzupgo concurrently (at the same time) with ANY of the following for the treatment of atopic dermatitis (a type of skin condition):
    1. Other non-steroidal topicals (such as calcineurin inhibitors [such as Elidel (pimecrolimus), Protopic (tacrolimus)], PDE-4 [phosphodiesterase-4] inhibitors [such as Eucrisa (crisaborole), Zoryve (roflumilast)], JAK [Janus kinase] inhibitors [such as Opzelura (ruxolitinib)], AhR [aryl hydrocarbon receptor] agonists [such as Vtama (tapinarof)])
    2. Systemic therapeutic biologics (such as Dupixent [dupilumab], Adbry [tralokinumab-ldrm])
    3. Other JAK (Janus kinase) inhibitors (such as Rinvoq [upadacitinib], Cibinqo [abrocitinib])
    4. Potent immunosuppressants (such as azathioprine, cyclosporine)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DELGOCITINIB

RENEWAL CRITERIA

1. Does the patient have a diagnosis of moderate to severe chronic hand eczema (CHE) (ICD-10 L30.8, L30.9) **AND** meet the following criterion?
   - The patient has had improvement of symptoms

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Will Anzupgo be used concurrently with **ANY** of the following for the treatment of atopic dermatitis?
   - Other non-steroidal topicals (e.g., calcineurin inhibitors [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)], PDE-4 inhibitors [e.g., Eucrisa (crisaborole), Zoryve (roflumilast)], JAK inhibitors [e.g., Opzelura (ruxolitinib)], AhR agonists [e.g., Vtama (tapinarof)])
   - Systemic therapeutic biologics (e.g., Dupixent [dupilumab], Adbry [tralokinumab-ldrm])
   - Other JAK inhibitors (e.g., Rinvoq [upadacitinib], Cibinqo [abrocitinib])
   - Potent immunosuppressants (e.g., azathioprine, cyclosporine)

   If yes, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

   If no, **approve for 12 months by HICL or GPI-10.**

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DELGOCITINIB (Anzupgo)** requires the following rule(s) be met for renewal:
   A. You have moderate to severe chronic hand eczema (CHE: a type of skin condition)
   B. You have had improvement of symptoms
   C. You will NOT use Anzupgo concurrently (at the same time) with ANY of the following for the treatment of atopic dermatitis (a type of skin condition):
      1. Other non-steroidal topicals (such as calcineurin inhibitors [such as Elidel (pimecrolimus), Protopic (tacrolimus)], PDE-4 [phosphodiesterase-4] inhibitors [such as Eucrisa (crisaborole), Zoryve (roflumilast)], JAK [Janus kinase] inhibitors [such as Opzelura (ruxolitinib)], AhR [aryl hydrocarbon receptor] agonists [such as Vtama (tapinarof)])
      2. Systemic therapeutic biologics (such as Dupixent [dupilumab], Adbry [tralokinumab-ldrm])
      3. Other JAK (Janus kinase) inhibitors (such as Rinvoq [upadacitinib], Cibinqo [abrocitinib])
      4. Potent immunosuppressants (such as azathioprine, cyclosporine)

   (Renewal denial text continued on next page)

GUIDELINES FOR USE

1. Does the patient have a diagnosis of Stage I-III cutaneous T-cell lymphoma (CTCL) (ICD-10 Group C84.A) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has relapsed or refractory disease
   - The patient has received at least one prior systemic therapy (e.g., methotrexate/pralatrexate, retinoids [e.g., acitretin, isotretinoin])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DENILEUKIN DIFTITOX-CXDL (Lymphir)** requires the following rule(s) be met for approval:
   A. You have Stage I-III cutaneous T-cell lymphoma (CTCL: a type of blood cancer that affects the skin)
   B. You are 18 years of age or older
   C. You have relapsed or refractory disease (disease that has returned or did not respond to treatment)
   D. You have received at least one prior systemic therapy (treatment that targets the entire body such as methotrexate/pralatrexate, retinoids [such as acitretin, isotretinoin])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GUIDELINES FOR USE

1. Does the patient have a diagnosis of multiple myeloma (ICD-10 Group C90.0) OR bone metastases from a solid tumor **AND** meet the following criterion?
   - Osenvelt will be used to prevent skeletal-related events (e.g., bone fractures, bone pain requiring radiation)

   If yes, **approve for 12 months by GPID or GPI-14 for #1.7mL per 28 days.**
   If no, continue to #2.

2. Does the patient have a diagnosis of giant cell tumor of bone (ICD-10 D48.0) **AND** meet the following criterion?
   - The patient's tumor is unresectable or surgical resection is likely to result in severe morbidity

   If yes, **approve for a total of 12 months as follows:**
   INITIAL REQUEST: Enter both authorizations.
   - **Approve for 1 month by GPID or GPI-14 for #5.1mL per 28 days.**
   - **Approve for 11 months by GPID or GPI-14 for #1.7mL per 28 days (Please enter a start date after the end date of the first authorization).**

   SUBSEQUENT REQUESTS:
   - **Approve for 12 months by GPID or GPI-14 for #1.7mL per 28 days.**

   If no, continue to #3.

3. Does the patient have a diagnosis of hypercalcemia of malignancy **AND** meet the following criterion?
   - The patient is refractory to a bisphosphonate therapy (e.g., Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate])

   If yes, **approve for a total of 12 months as follows:**
   INITIAL REQUEST: Enter both authorizations.
   - **Approve for 1 month by GPID or GPI-14 for #5.1mL per 28 days.**
   - **Approve for 11 months by GPID or GPI-14 for #1.7mL per 28 days (Please enter a start date after the end date of the first authorization).**

   SUBSEQUENT REQUESTS:
   - **Approve for 12 months by GPID or GPI-14 for #1.7mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DENOSUMAB-BMWO-OSENVELT

GUIDELINES FOR USE

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DENOSUMAB-BMWO-OSENVELT** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Multiple myeloma (a type of blood cancer)
   2. Bone metastases from a solid tumor (tumor has spread to the bone)
   3. Giant cell tumor of bone (noncancerous tumor)
   4. Hypercalcemia (high level of calcium in the blood) of malignancy (cancer)

B. If you have multiple myeloma or bone metastases from a solid tumor, approval also requires:
   1. Osenvelt will be used to prevent skeletal-related events (such as bone fractures, bone pain requiring radiation [a type of treatment])

C. If you have giant cell tumor of bone, approval also requires:
   1. Your tumor is unresectable (unable to remove by surgery) or surgical resection (removal) is likely to result in severe morbidity (illness)

D. If you have hypercalcemia of malignancy, approval also requires:
   1. You are refractory (disease did not respond to treatment) to a prior bisphosphonate therapy (such as Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Osenvelt and Xgeva.

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DENOSUMAB-BMWO	STOBOCLO		57209	GPI-14 (3004453022E520)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of postmenopausal osteoporosis (ICD-10 M81.0, Group M80.0)?

   If yes, continue to #2.
   If no, continue to #4.

2. Is the patient at high risk for fractures as defined as **ONE** of the following?
   - History of osteoporotic (fragility, low trauma) fracture(s)
   - Two or more risk factors for a fracture (e.g., history of multiple recent low trauma fractures, bone mineral density [BMD] T-score less than or equal to -2.5, corticosteroid use, use of gonadotropin-releasing hormone [GnRH] analogs such as Synarel [nafarelin])
   - No prior treatment for osteoporosis, AND a FRAX score of at least 20% for any major fracture OR at least 3% for hip fracture

   If yes, **approve for 12 months by GPID or GPI-14 for #2 fills with a quantity limit of #1mL per fill.**

   If no, continue to #3.

3. Does the patient meet **ONE** of the following criteria?
   - The patient had a trial of or contraindication to a bisphosphonate (e.g., Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate], Reclast [zoledronic acid])
   - The patient is unable to use oral therapy (upper gastrointestinal [GI] problems - unable to tolerate oral medication, lower GI problems - unable to absorb oral medications, trouble remembering to take oral medications or coordinating an oral bisphosphonate with other oral medications or their daily routine)

   If yes, **approve for 12 months by GPID or GPI-14 for #2 fills with a quantity limit of #1mL per fill.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DENOSUMAB-BMWO-STOBOCLO

GUIDELINES FOR USE (CONTINUED)

4. Does the patient have **ONE** of the following diagnoses?
   - Osteoporosis in a male patient (ICD-10 M81.0, Group M80.0)
   - Glucocorticoid-induced osteoporosis (ICD-10 M81.8, Group M80.8)

   If yes, continue to #5.
   If no, continue to #7.

5. Is the patient at high risk for fractures as defined as **ONE** of the following?
   - History of osteoporotic (fragility, low trauma) fracture(s)
   - Two or more risk factors for a fracture (e.g., history of multiple recent low trauma fractures, bone mineral density [BMD] T-score less than or equal to -2.5, corticosteroid use, use of gonadotropin-releasing hormone [GnRH] analogs such as Synarel [nafarelin])

   If yes, continue to #6.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

6. Has the patient had a trial of or contraindication to a bisphosphonate (e.g., Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate], Reclast [zoledronic acid])?

   If yes, **approve for 12 months by GPID or GPI-14 for #2 fills with a quantity limit of #1mL per fill.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

7. Does the patient have **ONE** of the following diagnoses?
   - Bone loss in men receiving androgen deprivation therapy (e.g., Eligard [leuprolide], Zoladex [goserelin]) for non-metastatic prostate cancer
   - Bone loss in women receiving adjuvant aromatase inhibitor therapy (e.g., anastrozole, letrozole) for breast cancer

   If yes, continue to #8.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DENOSUMAB-BMWO-STOBOCLO

GUIDELINES FOR USE (CONTINUED)

8. Does the patient meet **ALL** of the following criteria?
   - The patient is at high risk for fracture (e.g., history of osteoporotic fracture, history of multiple recent low trauma fractures, corticosteroid use, or use of gonadotropin-releasing hormone [GnRH] analogs such as Synarel [nafarelin])
   - The patient had a trial of or contraindication to a bisphosphonate (e.g., Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate], Reclast [zoledronic acid])

   If yes, **approve for 12 months by GPID or GPI-14 for #2 fills with a quantity limit of #1mL per fill.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DENOSUMAB-BMWO-STOBOCLO** requires the following rule(s) be met for approval:

   A. You have ONE of the following:
      1. Postmenopausal osteoporosis (a type of bone condition)
      2. Osteoporosis (a type of bone condition) in a male patient
      3. Glucocorticoid (steroid)-induced osteoporosis (a type of bone condition)
      4. Bone loss in men receiving androgen deprivation therapy (type of medication to lower hormone levels, such as Eligard [leuprolide], Zoladex [goserelin]) for non-metastatic prostate cancer (prostate cancer that has not spread to other parts of the body)
      5. Bone loss in women receiving adjuvant (add-on) aromatase inhibitor therapy (type of breast cancer medication, such as anastrozole, letrozole) for breast cancer

   (Denial text continued on next page)

GUIDELINES FOR USE (CONTINUED)

B. If you have postmenopausal osteoporosis, approval also requires ONE of the following:
1. You are at high risk for fractures (a type of complete or partial break in a bone) as defined as ONE of the following:
   a. You have a history of osteoporotic (fragility [weakness], low trauma [injury]) fracture(s) (a type of complete or partial break in a bone)
   b. You have two or more risk factors for a fracture (a type of complete or partial break in a bone) (such as history of multiple recent low trauma [injury] fractures, bone mineral density [BMD] T-score [a type of lab test] of less than or equal to -2.5, corticosteroid [such as prednisone] use, use of gonadotropin-releasing hormone [GnRH] analogs [such as Synarel (nafarelin)])
   c. You have had no prior treatment for osteoporosis (a type of bone condition), AND you have a Fracture Risk Assessment Tool (FRAX: a type of test) score of at least 20 percent for any major fracture (a type of complete or partial break in a bone) OR at least 3 percent for a hip fracture
2. You have tried or have a contraindication to (harmful for you to use) a bisphosphonate (such as Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate], Reclast [zoledronic acid])
3. You are unable to use oral therapy due to reasons such as upper gastrointestinal (GI: stomach and intestine) problems (such as unable to tolerate oral medications), lower GI problems (such as unable to absorb oral medications), trouble remembering to take oral medications or coordinating an oral bisphosphonate (such as Fosamax [alendronate]) with other oral medications or your daily routine

C. If you are a male with osteoporosis or you have glucocorticoid-induced osteoporosis, approval also requires:
1. You are at high risk for fractures (a type of complete or partial break in a bone) as defined as ONE of the following:
   a. You have a history of osteoporotic (fragility [weakness], low trauma [injury]) fracture(s) (a type of complete or partial break in a bone)
   b. You have two or more risk factors for a fracture (a type of complete or partial break in a bone) (such as history of multiple recent low trauma [injury] fractures, bone mineral density [BMD] T-score [a type of lab test] of less than or equal to -2.5, corticosteroid [such as prednisone] use, use of gonadotropin-releasing hormone [GnRH] analogs [such as Synarel (nafarelin)])
2. You have tried or have a contraindication to (harmful for you to use) a bisphosphonate (such as Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate], Reclast [zoledronic acid])

GUIDELINES FOR USE (CONTINUED)

D. If you are a man with bone loss who is receiving androgen deprivation therapy for non-metastatic prostate cancer or a woman with bone loss who is receiving adjuvant aromatase inhibitor therapy for breast cancer, approval also requires:

1. You are at high risk for fractures (a type of complete or partial break in a bone) (such as history of osteoporotic fracture, history of multiple recent low trauma [injury] fractures, corticosteroid [such as prednisone] use, or use of gonadotropin-releasing hormone [GnRH] analogs [such as Synarel (nafarelin)])
2. You have tried or have a contraindication to (harmful for you to use) a bisphosphonate (such as Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate], Reclast [zoledronic acid])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DENOSUMAB-PROLIA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DENOSUMAB	PROLIA		28656	GPI-14 (3004453000E520)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of postmenopausal osteoporosis (ICD-10 M81.0, Group M80.0) **AND** meet the following criterion?
   - The patient had a trial of or contraindication to the preferred agent: Stoboclo (denosumab-bmwo)

   If yes, continue to #2.
   If no, continue to #4.

2. Is the patient at high risk for fractures as defined as **ONE** of the following?
   - History of osteoporotic (fragility, low trauma) fracture(s)
   - Two or more risk factors for a fracture (e.g., history of multiple recent low trauma fractures, bone mineral density [BMD] T-score less than or equal to -2.5, corticosteroid use, use of gonadotropin-releasing hormone [GnRH] analogs such as Synarel [nafarelin])
   - No prior treatment for osteoporosis, AND a FRAX score of at least 20% for any major fracture OR at least 3% for hip fracture

   If yes, **approve for 12 months by GPID or GPI-14 for #2 fills with a quantity limit of #1mL per fill.**

   If no, continue to #3.

3. Does the patient meet **ONE** of the following criteria?
   - The patient had a trial of or contraindication to a bisphosphonate (e.g., Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate], Reclast [zoledronic acid])
   - The patient is unable to use oral therapy (upper gastrointestinal [GI] problems - unable to tolerate oral medication, lower GI problems - unable to absorb oral medications, trouble remembering to take oral medications or coordinating an oral bisphosphonate with other oral medications or their daily routine)

   If yes, **approve for 12 months by GPID or GPI-14 for #2 fills with a quantity limit of #1mL per fill.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

PRIOR AUTHORIZATION GUIDELINES

DENOSUMAB-XGEVA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DENOSUMAB	XGEVA		29261	GPI-14 (30044530002030)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of multiple myeloma (ICD-10 Group C90.0) OR bone metastases from a solid tumor and meet **ALL** of the following criteria?
   - Xgeva will be used to prevent skeletal-related events (e.g., bone fractures, bone pain requiring radiation)
   - The patient had a trial of or contraindication to the preferred agent: Osenvelt (denosumab-bmwo)

   If yes, **approve for 12 months by GPID or GPI-14 for #1.7mL per 28 days.**
   If no, continue to #2.

2. Does the patient have a diagnosis of giant cell tumor of bone (ICD-10 D48.0) and meet **ALL** of the following criteria?
   - The patient's tumor is unresectable or surgical resection is likely to result in severe morbidity
   - The patient had a trial of or contraindication to the preferred agent: Osenvelt (denosumab-bmwo)

   If yes, **approve for a total of 12 months by GPID or GPI-14 as follows:**
   INITIAL REQUESTS:
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #5.1mL per 28 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #1.7mL per 28 days.**

   SUBSEQUENT REQUESTS:
   - **Approve for 12 months with a quantity limit of #1.7mL per 28 days.**

   If no, continue to #3.

DENOSUMAB-XGEVA

GUIDELINES FOR USE

3. Does the patient have a diagnosis of hypercalcemia of malignancy and meet **ALL** of the following criteria?
   - The patient is refractory to a bisphosphonate therapy (e.g., Fosamax [alendronate], Actonel [risedronate], Boniva [ibandronate])
   - The patient had a trial of or contraindication to the preferred agent: Osenvelt (denosumab-bmwo)

   If yes, **approve for a total of 12 months by GPID or GPI-14 as follows:**
   INITIAL REQUESTS:
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #5.1mL per 28 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #1.7mL per 28 days.**

   SUBSEQUENT REQUESTS:
   - **Approve for 12 months with a quantity limit of #1.7mL per 28 days.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DENOSUMAB-XGEVA** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Multiple myeloma (a type of blood cancer)
      2. Bone metastases from a solid tumor (tumor has spread to the bone)
      3. Giant cell tumor of bone (noncancerous tumor)
      4. Hypercalcemia (high level of calcium in the blood) of malignancy (cancer)

   B. If you have multiple myeloma or bone metastases from a solid tumor, approval also requires:
      1. Xgeva will be used to prevent skeletal-related events (such as bone fractures, bone pain requiring radiation [a type of treatment])
      2. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Osenvelt (denosumab-bmwo)

   C. If you have giant cell tumor of bone, approval also requires:
      1. Your tumor is unresectable (unable to remove by surgery) or surgical resection (removal) is likely to result in severe morbidity (illness)
      2. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Osenvelt (denosumab-bmwo)

   (Denial text continued on next page)

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DEPEMOKIMAB-ULAA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DEPEMOKIMAB-ULAA	EXDENSUR	51066		GPI-10 (4460403000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of severe asthma with an eosinophilic phenotype (ICD-10 J82.83) and meet **ALL** of the following criteria?
   - The patient is 12 years of age or older
   - Therapy is prescribed by or in consultation with a physician specializing in allergy or pulmonary medicine
   - The patient has a blood eosinophil level of at least 150 cells/mcL within the past 12 months
   - Exdensur will be used in combination with a medium, high-dose, or maximally tolerated dose of an inhaled corticosteroid (ICS) (e.g., beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (e.g., a long-acting inhaled beta2-agonist [e.g., salmeterol, formoterol], a long-acting muscarinic antagonist [e.g., Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [e.g., montelukast, zafirlukast], theophylline)
   - Exdensur will NOT be used concurrently with another systemic biologic (e.g., Dupixent [dupilumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of eosinophilic phenotype asthma
   - The patient had a trial of or contraindication to THREE of the following preferred agents: Fasenra (benralizumab), Nucala (mepolizumab), Dupixent (dupilumab), Tezspire (tezepelumab-ekko)

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has experienced at least ONE asthma exacerbation requiring systemic corticosteroid (e.g., prednisone) burst lasting at least 3 days within the past 12 months
   - The patient has experienced at least ONE serious asthma exacerbation requiring a hospitalization or emergency room visit within the past 12 months

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, continue to #3.

CONTINUED ON NEXT PAGE

DEPEMOKIMAB-ULAA

INITIAL CRITERIA (CONTINUED)

3. Does the patient have poor symptom control despite current therapy as evidenced by at least **THREE** of the following within the past 4 weeks?
   - Daytime asthma symptoms more than twice per week
   - Any night waking due to asthma
   - Use of a short-acting inhaled beta2-agonist (SABA) (e.g., albuterol) reliever for symptoms more than twice per week
   - Any activity limitation due to asthma

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEPEMOKIMAB-ULAA (Exdensur)** requires the following rule(s) be met for approval:
   A. You have severe eosinophilic phenotype asthma (a type of inflammatory asthma)
   B. You are 12 years of age or older
   C. Therapy is prescribed by or in consultation with a doctor specializing in allergy or pulmonary (relating to lungs/breathing) medicine
   D. You have a blood eosinophil (a type of white blood cell) level of at least 150 cells/mcL within the past 12 months
   E. Exdensur will be used in combination with a medium, high-dose, or maximally tolerated dose of an inhaled corticosteroid (such as beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (taken on a regular basis), such as a long-acting inhaled beta2-agonist (such as salmeterol, formoterol), a long-acting muscarinic antagonist (such as Tudorza [aclidinium], Spiriva [tiotropium], Incruse Ellipta [umeclidinium]), a leukotriene receptor antagonist (such as montelukast, zafirlukast), or theophylline
   F. You will NOT use Exdensur concurrently (at the same time) with another systemic biologic (such as Dupixent [dupilumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic phenotype asthma (a type of inflammatory asthma)
   G. You have tried or have a contraindication to (harmful for you to use) THREE of the following preferred medications: Fasenra (benralizumab), Nucala (mepolizumab), Dupixent (dupilumab), Tezspire (tezepelumab-ekko)

   (Initial denial text continued on the next page)

DEPEMOKIMAB-ULAA

INITIAL CRITERIA (CONTINUED)

H. You meet ONE of the following:
   1. You have experienced at least ONE asthma exacerbation (worsening of symptoms) requiring systemic corticosteroid (such as prednisone) burst lasting at least 3 days within the past 12 months
   2. You have experienced at least ONE serious asthma exacerbation (worsening of symptoms) requiring a hospitalization or emergency room visit within the past 12 months
   3. You have poor symptom control despite current therapy as shown by at least THREE of the following within the past 4 weeks:
      a. Daytime asthma symptoms more than twice per week
      b. Any night waking due to asthma
      c. Use of a short-acting inhaled beta2-agonist reliever (such as albuterol) for symptoms more than twice per week
      d. Any activity limitation due to asthma

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DEPEMOKIMAB-ULAA

RENEWAL CRITERIA

1. Does the patient have a diagnosis of severe asthma with an eosinophilic phenotype (ICD-10 J82.83) and meet **ALL** of the following criteria?
   - The patient will continue to use an inhaled corticosteroid (ICS) (e.g., beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (e.g., a long-acting inhaled beta2-agonist [e.g., salmeterol, formoterol], a long-acting muscarinic antagonist [e.g., Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [e.g., montelukast, zafirlukast], theophylline)
   - Exdensur will NOT be used concurrently with another systemic biologic (e.g., Dupixent [dupilumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of eosinophilic phenotype asthma
   - The patient had a trial of or contraindication to THREE of the following preferred agents: Fasenra (benralizumab), Nucala (mepolizumab), Dupixent (dupilumab), Tezspire (tezepelumab-ekko)

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Has the patient shown a clinical response as evidenced by **ONE** of the following?
   - Reduction in asthma exacerbations from baseline
   - Decreased utilization of rescue medications (e.g., albuterol)
   - Increase in percent predicted FEV1 from pretreatment baseline
   - Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

DEPEMOKIMAB-ULAA

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DEPEMOKIMAB-ULAA (Exdensur)** requires the following rule(s) be met for renewal:

A. You have severe eosinophilic phenotype asthma (a type of inflammatory asthma)
B. You will continue to use an inhaled corticosteroid (such as beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (taken on a regular basis) such as a long-acting inhaled beta2-agonist (such as salmeterol, formoterol), a long-acting muscarinic antagonist (such as Tudorza [aclidinium], Spiriva [tiotropium], Incruse Ellipta [umeclidinium]), a leukotriene receptor antagonist (such as montelukast, zafirlukast), or theophylline
C. You will NOT use Exdensur concurrently (at the same time) with another systemic biologic (such as Dupixent [dupilumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic phenotype asthma (a type of inflammatory asthma)
D. You have tried or have a contraindication to (harmful for you to use) THREE of the following preferred medications: Fasenra (benralizumab), Nucala (mepolizumab), Dupixent (dupilumab), Tezspire (tezepelumab-ekko)
E. You have shown a clinical response as evidenced by ONE of the following:
    1. You have experienced a decrease in asthma exacerbations (worsening of symptoms) from baseline (before starting Exdensur)
    2. You have decreased your use of rescue medications (such as albuterol)
    3. You have an increase in the percent predicted FEV1 (a type of lung test) from pretreatment baseline (before starting Exdensur)
    4. You have a decrease in the severity or frequency of asthma-related symptoms (such as wheezing, shortness of breath, coughing)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DESIRUDIN	IPRIVASK	19072		GPI-10 (8333403000)	

GUIDELINES FOR USE

1. Is the request for Iprivask for the prevention (prophylaxis) of deep vein thrombosis (DVT) for a patient undergoing elective hip replacement surgery?

   If yes, **approve for a total of 35 days of treatment. Enter two authorizations as follows:**
   - **Approve for 12 days by HICL or GPI-10 for #24 vials.**
   - **Also enter one fill for 23 days by HICL or GPI-10 for #46 vials with a start date of 7 days following the initial approval.**

   If no, do not approve.
   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DESIRUDIN (Iprivask)** requires that you are receiving Iprivask for the prevention of deep vein thrombosis (DVT; blood clot in a deep vein, usually in the legs) and you are undergoing elective hip replacement surgery.

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Iprivask.

DEUCRAVACITINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DEUCRAVACITINIB	SOTYKTU	48292		GPI-10 (9025052400)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a dermatologist
   - Sotyktu will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

   If yes, continue to #2.
   If no, continue to #4.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) OR PUVA (phototherapy) for the treatment of PsO
   - The patient has a contraindication or intolerance to both clinical standard of care therapies: an immunosuppressant AND PUVA (phototherapy) for the treatment of PsO
   - The patient is switching from a different biologic (e.g., Humira [adalimumab]), PDE-4 inhibitor (e.g., Otezla [apremilast]), or JAK inhibitor for the same indication

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient meet **ONE** of the following criteria?
   - The patient was previously stable on another biologic and is switching to Sotyktu
   - The patient has psoriasis covering 3 percent or more of body surface area (BSA)
   - The patient has psoriatic lesions affecting the hands, feet, face, genital area, or scalp

   If yes, **approve for 4 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DEUCRAVACITINIB

INITIAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of psoriatic arthritis (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
   - Sotyktu will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEUCRAVACITINIB (Sotyktu)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Moderate to severe plaque psoriasis (PsO: a type of skin condition)
      2. Psoriatic arthritis (PsA: a type of skin and joint condition)

   B. If you have moderate to severe plaque psoriasis, approval also requires:
      1. You are 18 years of age or older
      2. Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
      3. You will NOT use Sotyktu concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)
      4. You meet ONE of the following:
         a. You have had at least a 3-month trial of ONE clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) OR PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis
         b. You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of medication that decreases the body's immune response) AND PUVA (phototherapy) for the treatment of plaque psoriasis
         c. You are switching from a different biologic (such as Humira [adalimumab]), PDE-4 (phosphodiesterase-4) inhibitor (such as Otezla [apremilast]), or JAK (Janus kinase) inhibitor for the same indication
      5. You meet ONE of the following:
         a. You were previously stable on another biologic and are switching to Sotyktu
         b. You have psoriasis covering 3 percent or more of body surface area (BSA)
         c. You have psoriatic lesions (rashes) affecting the hands, feet, face, genital area, or scalp

DEUCRAVACITINIB

RENEWAL CRITERIA

1. Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
   - The patient has achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more while on therapy
   - Sotyktu will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, continue to #2.

2. Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
   - The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
   - Sotyktu will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEUCRAVACITINIB (Sotyktu)** requires the following rule(s) be met for renewal:

   A. You have ONE of the following:
      1. Moderate to severe plaque psoriasis (PsO: a type of skin condition)
      2. Psoriatic arthritis (PsA: a type of skin and joint condition)

   B. If you have moderate to severe plaque psoriasis, renewal also requires:
      1. You have achieved or maintained clear or minimal disease OR a decrease in PASI (Psoriasis Area and Severity Index: a tool for evaluating the severity of psoriasis) of at least 50 percent or more while on therapy
      2. You will NOT use Sotyktu concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis (a type of skin condition)

   (Renewal denial text continued on next page)

DEURUXOLITINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DEURUXOLITINIB PHOSPHATE	LEQSELVI	49773		GPI-10 (9073102060)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of severe alopecia areata (ICD-10 Group L63) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a dermatologist
   - The patient has had at least 50% scalp hair loss, as measured by the Severity of Alopecia Tool (SALT), for more than 6 months
   - Leqselvi will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor [e.g., Litfulo (ritlecitinib)], PDE-4 inhibitor) for the treatment of alopecia areata
   - The patient had a trial of or contraindication to BOTH of the following preferred agents: Litfulo (ritlecitinib), Olumiant (baricitinib)
     [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance program do not qualify]

     If yes, continue to #2.
     If no, do not approve.
     DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Has the patient had a trial of or contraindication to **TWO** of the following clinical standard of care agents (from different categories)?
   - Intralesional corticosteroid (e.g., triamcinolone acetonide)
   - Topical corticosteroid (e.g., fluocinolone acetonide, betamethasone dipropionate, clobetasol propionate)
   - Minoxidil (e.g., minoxidil 5% solution)
   - Short contact anthralin
   - Topical immunotherapy (e.g., squaric acid dibutyl ester, diphencyprone/diphenylcyclopropenone)
   - Systemic treatments (e.g., psoralen plus UV-A [PUVA], prednisone, cyclosporine, methotrexate)

     If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per day.**
     If no, do not approve.

DEURUXOLITINIB

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DEURUXOLITINIB (Leqselvi)** requires the following rule(s) be met for approval:

A. You have severe alopecia areata (a type of hair loss)
B. You are 18 years of age or older
C. Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
D. You have had at least 50 percent scalp hair loss, as measured by the Severity of Alopecia Tool (SALT: a type of disease evaluation tool), for more than 6 months
E. You will NOT use Leqselvi concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Litfulo (ritlecitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of alopecia areata (a type of hair loss)
F. You have tried or have a contraindication to (harmful for you to use) BOTH of the following preferred medications: Litfulo (ritlecitinib), Olumiant (baricitinib)
G. You have tried or have a contraindication to TWO of the following clinical standard of care medications (from different categories):
    1. Intralesional corticosteroid (such as triamcinolone acetonide)
    2. Topical corticosteroid (such as fluocinolone acetonide, betamethasone dipropionate, clobetasol propionate)
    3. Minoxidil (such as minoxidil 5% solution)
    4. Short contact anthralin
    5. Topical immunotherapy (such as squaric acid dibutyl ester, diphencyprone/diphenylcyclopropenone)
    6. Systemic treatments (such as psoralen plus UV-A [PUVA: a type of light therapy], prednisone, cyclosporine, methotrexate)

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

DEUTETRABENAZINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DEUTETRABENAZINE	AUSTEDO, AUSTEDO XR	44192		GPI-10 (6238003000)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of chorea (involuntary movements) associated with Huntington's disease (ICD-10 G10) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist or movement disorder specialist
   - The patient had a trial of or contraindication to the preferred agent: Ingrezza (valbenazine)

   If yes, **approve for 12 months as follows:**
   INITIAL REQUESTS for XR formulation:
   FIRST APPROVAL: Please override the quantity limit coded on the formulary by selecting the "QL Only" override: Approve for 6 weeks by GPID or GPI-14 for all of the following:
   - **6-12-24mg XR titration kit: #42 per 28 days for 1 fill.**
   - **12-18-24-30mg XR titration kit: #28 per 28 days for 1 fill.**
   - **6mg XR: #6 per day.**
   - **12mg XR: #4 per day.**
   - **18mg XR: #2 per day.**
   - **24mg XR: #2 per day.**

   SECOND APPROVAL: Approve for 46 weeks by HICL or GPI-10.

   SUBSEQUENT REQUESTS for XR formulation: Approve for 12 months by HICL or GPI-10.

   For IR formulation: Approve for 12 months by HICL or GPI-10.

   If no, continue to #2.

DEUTETRABENAZINE

GUIDELINES FOR USE (CONTINUED)

2. Does the patient have a diagnosis of moderate to severe tardive dyskinesia (TD) (ICD-10 G24.01) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's TD has been present for at least 3 months
   - Therapy is prescribed by or in consultation with a neurologist, movement disorder specialist, or psychiatrist
   - The patient has a prior history of using antipsychotic medications (e.g., aripiprazole, haloperidol, ziprasidone) or metoclopramide for at least 3 months (or at least 1 month if the patient is 60 years of age or older) as documented in the prescription claims history
   - The patient had a trial of or contraindication to the preferred agent: Ingrezza (valbenazine)

   If yes, **approve for 12 months as follows:**
   INITIAL REQUESTS for XR formulation:
   FIRST APPROVAL: Please override the quantity limit coded on the formulary by selecting the "QL Only" override: Approve for 6 weeks by GPID or GPI-14 for all of the following:
   - **6-12-24mg XR titration kit: #42 per 28 days for 1 fill.**
   - **12-18-24-30mg XR titration kit: #28 per 28 days for 1 fill.**
   - **6mg XR: #6 per day.**
   - **12mg XR: #4 per day.**
   - **18mg XR: #2 per day.**
   - **24mg XR: #2 per day.**

   SECOND APPROVAL: Approve for 46 weeks by HICL or GPI-10.

   SUBSEQUENT REQUESTS for XR formulation: Approve for 12 months by HICL or GPI-10.

   For IR formulation: Approve for 12 months by HICL or GPI-10.

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DEUTETRABENAZINE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DEUTETRABENAZINE (Austedo)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Chorea (involuntary muscle movements) associated with Huntington's disease (a type of brain disorder)
   2. Moderate to severe tardive dyskinesia (TD: uncontrolled body movements)

B. If you have chorea associated with Huntington's disease, approval also requires:
   1. You are 18 years of age or older
   2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) or movement disorder specialist
   3. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Ingrezza (valbenazine)

C. If you have moderate to severe tardive dyskinesia, approval also requires:
   1. You are 18 years of age or older
   2. Your moderate to severe tardive dyskinesia (uncontrolled body movements) has been present for at least 3 months
   3. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor), movement disorder specialist, or psychiatrist (a type of mental health doctor)
   4. You have a prior history of using antipsychotic medications (such as aripiprazole, haloperidol, ziprasidone) or metoclopramide for at least 3 months (or at least 1 month if you are 60 years of age or older) as documented in your prescription claims history
   5. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Ingrezza (valbenazine)

RATIONALE

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DEXMEDETOMIDINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DEXMEDETOMIDINE HCL	IGALMI	20971		GPI-10 (6020603010)	ROUTE = SUBLINGUAL

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Is the request for the treatment of acute agitation associated with schizophrenia or bipolar I or II disorder (ICD-10 Groups F20, F31) and the patient meets **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a psychiatrist
   - The patient had a trial of or contraindication to THREE antipsychotics (e.g., olanzapine, ziprasidone, haloperidol)

   If yes, **approve the requested strength for 1 month by GPID or GPI-14 with a quantity limit of #3 per day.**

   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEXMEDETOMIDINE (Igalmi)** requires the following rule(s) be met for approval:
   A. You have acute (short-term) agitation associated with schizophrenia (a type of mental health disorder) or bipolar I or II disorder (a type of mood disorder)
   B. You are 18 years of age or older
   C. Therapy is prescribed by or in consultation with a psychiatrist (a type of mental health doctor)
   D. You have tried or have a contraindication to (harmful for you to use) THREE antipsychotics (such as olanzapine, ziprasidone, haloperidol)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DEXMEDETOMIDINE

RENEWAL CRITERIA

1. Is the request for the treatment of acute agitation associated with schizophrenia or bipolar I or II disorder (ICD-10 Groups F20, F31)?

   If yes, continue to #2.
   If no, do no approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Is the patient's maintenance therapy for the underlying psychiatric disorder currently being adjusted/optimized to reduce or eliminate the need for continued PRN medications for acute agitation?

   If yes, **approve the requested strength for 3 months by GPID or GPI-14 with a quantity limit of #3 per day.**

   If no, continue to #3.

3. Have attempts to adjust medications been exhausted **AND** the physician has determined that chronic PRN medications are required for the continued safety of the patient or caregivers?

   If yes, **approve the requested strength for 6 months by GPID or GPI-14 with a quantity limit of #3 per day.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DEXMEDETOMIDINE (Igalmi)** requires the following rule(s) be met for renewal:
   A. You have acute (short-term) agitation associated with schizophrenia (a type of mental health disorder) or bipolar I or II disorder (a type of mood disorder)
   B. You meet ONE of the following:
      1. Your maintenance therapy for the underlying psychiatric (mental) disorder is currently being adjusted/optimized to reduce or eliminate the need for continued PRN (as needed) medications for the treatment of acute agitation
      2. Attempts to adjust medications have been exhausted AND your physician (doctor) has determined that chronic PRN (long-term as needed) medications are required for the continued safety of you or your caregivers

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DIABETIC TEST STRIPS

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
BLOOD SUGAR DIAGNOSTIC, BLOOD SUGAR DIAGNOSTIC, DISC, BLOOD SUGAR DIAGNOSTIC, DRUM	DIABETIC TEST STRIPS VARIOUS		25200	GPI-14 (94100030006100)	

CSR NOTE: Requests for blood glucose (diabetic) test strips manufactured by Abbott (FreeStyle and Precision) will adjudicate at the point of service with no restrictions. Non-formulary test strips will require prior authorization.

GUIDELINES FOR USE

1. Has the patient tried one of the following preferred blood glucose (diabetic) meters and test strips by Abbott: FreeStyle or Precision?

   If yes, **approve open-ended by GPID or GPI-14.**
   If no, continue to #2.

2. Does the patient require the use of a non-preferred blood glucose test strip due to significant visual and/or cognitive impairment?

   If yes, **approve open-ended by GPID or GPI-14.**
   If no, continue to #3.

3. Is the prescriber requesting a non-preferred test strip due to a need for data management software? [**Note:** The preferred test strips include FreeStyle and Precision by Abbott]

   If yes, do not approve, and recommend the prescriber contact Abbott for data management software and a connection cable for the meter.
   DENIAL TEXT: See the denial text at the end of the guideline.

   If no, continue to #4.

DIABETIC TEST STRIPS

GUIDELINES FOR USE (CONTINUED)

4. Does the patient require the use of a non-preferred blood glucose test strip based on his/her use of another manufacturer's companion insulin pump?

   If yes, **approve open-ended by GPID or GPI-14.**
   If no, do not approve.
   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DIABETIC TEST STRIPS** requires ONE of following rules be met for approval:
   A. You have tried ONE preferred blood glucose (diabetic) meter and test strips. The preferred meters and test strips are FreeStyle and Precision by Abbott
   B. You require a non-preferred blood glucose test strip due to significant visual and/or cognitive impairment (problems with sight and/or memory and thinking)
   C. You require a non-preferred blood glucose test strip because you use another manufacturer's companion insulin pump

   Request for non-preferred test strips will not be approved if due to a need for data management software. Please note that data management software is available for the formulary test strip products. Please contact Abbott for data management software and a connection cable for the meter.

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different product or get us more information if it will allow us to approve this request.

RATIONALE

The intent of this prior authorization is to encourage the use of cost-effective formulary preferred glucose testing strips before considering coverage of non-preferred alternatives.

DICHLORPHENAMIDE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DICHLORPHENAMIDE	KEVEYIS, ORMALVI, DICHLORPHENAMIDE	03642		GPI-10 (3710002000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of primary hyperkalemic periodic paralysis or related variants (ICD-10 G72.3), and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient has tried acetazolamide AND a thiazide diuretic (i.e., hydrochlorothiazide)
   - The patient does NOT have hepatic insufficiency, pulmonary obstruction, or a health condition that warrants concurrent use with high-dose aspirin

   If yes, **approve for 2 months by HICL or GPI-10 with a quantity limit of #4 per day.**
   If no, continue to #2.

2. Does the patient have a diagnosis of primary hypokalemic periodic paralysis or related variants (ICD-10 G72.3), and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient has tried acetazolamide AND a potassium-sparing diuretic (i.e., spironolactone, triamterene)
   - The patient does NOT have hepatic insufficiency, pulmonary obstruction, or a health condition that warrants concurrent use with high-dose aspirin

   If yes, **approve for 2 months by HICL or GPI-10 with a quantity limit of #4 per day.**
   If no, do not approve.

   DENIAL TEXT: See the initial denial text at the end of the guideline.

DICHLORPHENAMIDE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DICHLORPHENAMIDE (Keveyis, Ormalvi)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Primary hyperkalemic periodic paralysis (extreme muscle weakness with high potassium levels in your blood) or related variants
   2. Primary hypokalemic periodic paralysis (extreme muscle weakness with low potassium levels in your blood) or related variants

B. If you have primary hyperkalemic periodic paralysis or related variants, approval also requires:
   1. You are 18 years of age or older
   2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
   3. You have tried acetazolamide AND a thiazide diuretic (hydrochlorothiazide)
   4. You do NOT have hepatic insufficiency (liver failure), pulmonary obstruction (difficulty breathing due to blockage of airflow), or a health condition that requires you to use high-dose aspirin at the same time

C. If you have primary hypokalemic periodic paralysis or related variants, approval also requires:
   1. You are 18 years of age or older
   2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
   3. You have tried acetazolamide AND a potassium-sparing diuretic (spironolactone, triamterene)
   4. You do NOT have hepatic insufficiency (liver failure), pulmonary obstruction (difficulty breathing due to blockage of airflow), or a health condition that requires you to use high-dose aspirin at the same time

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

      1. Heart failure (a type of heart condition)
      2. Chronic atrial fibrillation (a type of heart condition)
   B. If you have chronic atrial fibrillation, approval also requires:
      1. You are 18 years of age or older

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Lanoxin.

DIHYDROERGOTAMINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DIHYDROERGOTAMINE MESYLATE	TRUDHESA	00155		GPI-10 (6700003011)	BRAND = TRUDHESA

GUIDELINES FOR USE

1. Is the request for the acute treatment of migraines (ICD-10 Group G43 except G43.7 and G43.E) and the patient meets **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Trudhesa will NOT be used concurrently with any other dihydroergotamine or ergotamine product (e.g., Migranal [dihydroergotamine], Ergomar [ergotamine])

   If yes, continue to #2.
   If no, continue to #3.

2. Has the patient had a trial of or contraindication to **ALL** of the following preferred agents?
   - Two triptans (e.g., Imitrex [sumatriptan], Maxalt [rizatriptan], Relpax [eletriptan])
   - One generic dihydroergotamine product (e.g., dihydroergotamine mesylate 1mg/mL, dihydroergotamine mesylate 0.5mg/spry)
   - One CGRP inhibitor: Nurtec ODT (rimegepant), Ubrelvy (ubrogepant)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Is the request for the acute treatment of cluster headache (ICD-10 Groups G44.00, G44.01, G44.02) and the patient meets **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Trudhesa will NOT be used concurrently with any other dihydroergotamine or ergotamine product (e.g., Migranal [dihydroergotamine], Ergomar [ergotamine])

   If yes, continue to #4.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

4. Has the patient had a trial of or contraindication to **BOTH** of the following preferred agents?
   - One triptan: Imitrex (sumatriptan injection, sumatriptan intranasal), Zomig (zolmitriptan intranasal)
   - One generic dihydroergotamine injectable (e.g., dihydroergotamine mesylate 1mg/mL) or generic dihydroergotamine intranasal (e.g., dihydroergotamine mesylate 0.5mg/spry)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

DIHYDROERGOTAMINE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DIHYDROERGOTAMINE (Trudhesa)** requires the following rule(s) be met for approval:

A. The request is for ONE of the following:
   1. Acute (quick onset) treatment of migraines (a type of headache)
   2. Acute (quick onset) treatment of cluster headache (a type of headache)

B. If the request is for the acute treatment of migraines, approval also requires:
   1. You are 18 years of age or older
   2. You will NOT use Trudhesa concurrently (at the same time) with any other dihydroergotamine or ergotamine medication (such as Migranal [dihydroergotamine], Ergomar [ergotamine])
   3. You have tried or have a contraindication to (harmful for you to use) ALL of the following preferred medications:
      a. Two triptans (such as Imitrex [sumatriptan], Maxalt [rizatriptan], Relpax [eletriptan])
      b. One generic dihydroergotamine product (such as dihydroergotamine mesylate 1mg/mL, dihydroergotamine mesylate 0.5mg/spry)
      c. One calcitonin gene-related peptide (CGRP) inhibitor: Nurtec ODT (rimegepant), Ubrelvy (ubrogepant)

C. If the request is for the acute treatment of cluster headache, approval also requires:
   1. You are 18 years of age or older
   2. You will NOT use Trudhesa concurrently (at the same time) with any other dihydroergotamine or ergotamine medication (such as Migranal [dihydroergotamine], Ergomar [ergotamine])
   3. You have tried or have a contraindication to (harmful for you to use) BOTH of the following preferred medications:
      a. One triptan: Imitrex (sumatriptan injection, sumatriptan intranasal), Zomig (zolmitriptan intranasal)
      b. One generic dihydroergotamine injectable (e.g., dihydroergotamine mesylate 1mg/mL) or generic dihydroergotamine intranasal (e.g., dihydroergotamine mesylate 0.5mg/spry)

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Trudhesa.

DIMETHYL FUMARATE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DIMETHYL FUMARATE	TECFIDERA, DIMETHYL FUMARATE	40168		GPI-10 (6240552500)	FDB ROUTE ≠ MISCELL

GUIDELINES FOR USE

1. Does the patient have a diagnosis of a relapsing form of multiple sclerosis (MS) (ICD-10 G35), including clinically isolated syndrome, relapsing-remitting disease, or active secondary progressive disease **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

2. Is the request for generic dimethyl fumarate?

   If yes, **approve generic dimethyl fumarate for 12 months by HICL or GPI-10 with a quantity limit of #2 per day and override 'Generic Only' field.**
   If no, continue to #3.

3. Is the request for brand Tecfidera **AND** the patient meets the following criterion?
   - The patient had a trial of generic dimethyl fumarate

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
   If no, do not approve.
   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DIMETHYL FUMARATE (Tecfidera)** requires the following rule(s) be met for approval:
   A. You have a relapsing form of multiple sclerosis (MS: a type of nerve disorder), which includes clinically isolated syndrome (disease occurs once), relapsing-remitting disease (symptoms or disease goes away and returns), or active secondary progressive disease (advanced disease)
   B. You are 18 years of age or older
   C. If you are requesting brand Tecfidera, approval also requires:
      1. You have tried generic dimethyl fumarate

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DINUTUXIMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DINUTUXIMAB	UNITUXIN	42038		GPI-10 (2135602800)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of high-risk neuroblastoma (HRNB) and meet **ALL** of the following criteria?
   - The patient is younger than 18 years of age
   - Unituxin will be used in combination with a granulocyte-macrophage colony-stimulating factor (GM-CSF), interleukin-2 (IL-2), and 13-cis-retinoic acid (RA)
   - The patient has achieved a partial response to prior first-line multi-agent, multimodal therapy (e.g., chemotherapy, surgery, radiation, stem cell transplant)
   - The patient has NOT undergone 5 cycles of Unituxin

   If yes, **approve for 12 months by HICL or GPI-10 with a total fill count of 5.**
   If no, do not approve.

   DENIAL TEXT: ***Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.**

   Our guideline named **DINUTUXIMAB (Unituxin)** requires the following rule(s) be met for approval:
   A. You have high-risk neuroblastoma (HRNB: a type of cancer)
   B. You are younger than 18 years of age
   C. Unituxin will be used together with a granulocyte-macrophage colony-stimulating factor (GM-CSF: a type of medication used to make more white blood cells), interleukin-2 (IL-2), and 13-cis-retinoic acid (RA) (types of medications used to treat cancer)
   D. You have shown a partial response (the cancer partly responded to treatment, but still did not go away) to prior first-line multi-agent, multimodal therapy (therapy that includes many medications and ways to treat your condition, such as chemotherapy, surgery, radiation, stem cell transplant)
   E. You have NOT received 5 cycles of Unituxin

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Unituxin.

DONANEMAB-AZBT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DONANEMAB-AZBT	KISUNLA	49736		GPI-10 (6205052201)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of Alzheimer's disease (ICD-10 Group G30) and meet **ALL** of the following criteria?
   - The patient is 60 years of age or older
   - The patient has mild cognitive impairment or mild dementia
   - Therapy is prescribed by or in consultation with a neurologist or psychiatrist
   - The patient had an amyloid pathology confirmed by positron emission tomography (PET) or detected by CSF-based testing (e.g., Aβ42, total tau [T-tau], phosphorylated tau [P-tau])
   - The patient has a Clinical Dementia Rating (CDR) global score of 0.5 or 1.0, OR a Mini Mental Status Exam (MMSE) score of 20-28 at baseline
   - The patient has Alzheimer’s Association Workgroup Clinical Stage 3 (cognitive impairment but mostly maintains independence on activities of daily living [ADL]) or Clinical Stage 4 (cognitive impairment with mild functional impairments on instrumental ADLs but independence in basic ADLs) Alzheimer’s disease
   - The patient had a baseline brain MRI within 1 year prior to treatment
   - The patient had genotype testing to determine apolipoprotein E ε4 (ApoE ε4) status prior to initiation of treatment OR the patient/caregiver has been counseled on the risk of treatment and has waived genotype testing
   - The patient is NOT at increased risk of cerebral bleeding (e.g., evidence of cerebral micro- or macrohemorrhages, superficial siderosis, vasogenic edema, aneurysms or vascular malformations, lacunar infarcts or severe small vessel or white matter disease on screening MRI, uncontrolled bleeding disorder, platelet count less than 50,000 or international normalized ratio greater than 1.5)
   - Kisunla will NOT be used concurrently with any other anti-amyloid agent (e.g., Leqembi [lecanemab-irmb], Leqembi IQLIK [lecanemab-irmb]), anticoagulant (e.g., warfarin, Xarelto [rivaroxaban], Pradaxa [dabigatran], Eliquis [apixaban], Savaysa [edoxaban]), or dual therapy antiplatelet (e.g. Plavix [clopidogrel] with aspirin) (monotherapy antiplatelet is acceptable)

DONANEMAB-AZBT

INITIAL CRITERIA (CONTINUED)

If yes, **approve for a total of 7 months by HICL or GPI-10. Please enter four authorizations as follows:**

- **FIRST APPROVAL: Approve for 1 month with a quantity limit of #20mL per 28 days for 1 fill.**
- **SECOND APPROVAL: Approve for 1 month with a quantity limit of #40mL per 28 days for 1 fill (please enter a start date of 3 days BEFORE the END date of the first approval).**
- **THIRD APPROVAL: Approve for 1 month with a quantity limit of #60mL per 28 days for 1 fill (please enter a start date of 3 days BEFORE the END date of the second approval).**
- **FOURTH APPROVAL: Approve for 4 months with a quantity limit of #80mL per 28 days (please enter a start date of 3 days BEFORE the END date of the third approval).**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DONANEMAB-AZBT (Kisunla)** requires the following rule(s) be met for approval:

A. You have Alzheimer's disease (a progressive brain disorder that slowly destroys memory and thinking skills)
B. You are 60 years of age or older
C. You have mild cognitive impairment (decreased ability to process, understand, store and remember information) or mild dementia (a type of memory disorder) due to Alzheimer's disease (a progressive brain disorder that slowly destroys memory and thinking skills)
D. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) or psychiatrist (a type of mental health doctor)
E. You had an amyloid pathology (abnormal buildup of a type of protein) confirmed by positron emission tomography (PET: a type of imaging test) or detected by cerebrospinal fluid (CSF: a type of liquid in the brain and spinal cord)-based testing (such as amyloid-beta 42 [Aβ42], total tau [T-tau], phosphorylated tau [P-tau]) (types of lab tests)
F. You have a Clinical Dementia Rating (CDR: a tool for evaluating memory loss) global score of 0.5 or 1.0, OR a Mini Mental Status Exam (MMSE: a test used to evaluate memory, thinking, and understanding) score of 20 to 28 at baseline (before treatment)

(Initial denial text continued on next page)

CONTINUED ON NEXT PAGE

DONANEMAB-AZBT

INITIAL CRITERIA (CONTINUED)

G. You have Alzheimer's Association Workgroup Clinical Stage 3 (cognitive impairment [decreased ability to process, understand, store and remember information] but mostly maintains independence on activities of daily living [ADL: basic everyday tasks]) or Clinical Stage 4 (cognitive impairment with mild functional impairments on instrumental ADLs but independence in basic ADLs) Alzheimer's disease (a progressive brain disorder that slowly destroys memory and thinking skills)
H. You have had a baseline brain MRI (magnetic resonance imaging: a type of imaging lab) within 1 year prior to treatment
I. You had genotype testing (a type of lab test) to determine apolipoprotein E ε4 (ApoE ε4: a type of gene) status prior to initiation of treatment OR you/your caregiver have been counseled on the risk of treatment and have waived genotype testing
J. You are NOT at an increased risk of cerebral bleeding (such as evidence of cerebral microhemorrhages [small amount of bleeding in the brain] or macrohemorrhages [large amount of bleeding in the brain], superficial siderosis [a type of small bleeds in the brain], vasogenic edema [a type of brain swelling], aneurysms [weak bulging spot in the blood vessel] or vascular malformations [abnormal blood vessels], lacunar infarcts [brain stroke] or severe small vessel [damaged small blood vessels in the brain] or white matter disease [damaged nerve fibers in the brain] on screening magnetic resonance imaging [MRI: a type of imaging lab], uncontrolled bleeding disorder, platelet [a type of blood cell] count less than 50,000 or international normalized ratio [a blood test to check how long it takes your blood to clot] greater than 1.5)
K. You will NOT use Kisunla concurrently (at the same time) with any other anti-amyloid medication (such as Leqembi [lecanemab-irmb], Leqembi IQLIK [lecanemab-irmb]), anticoagulant (such as warfarin, Xarelto [rivaroxaban], Pradaxa [dabigatran], Eliquis [apixaban], Savaysa [edoxaban]), or dual therapy antiplatelet (such as Plavix [clopidogrel] with aspirin) (monotherapy [one medication treatment] antiplatelet is acceptable)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DONANEMAB-AZBT

RENEWAL CRITERIA

1. Does the patient have a diagnosis of Alzheimer's disease (ICD-10 Group G30)?

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Is this a first renewal request? (**NOTE:** Renewal request after the Initial approval of 7 months.)

   If yes, continue to #3.
   If no, continue to #6.

3. Does the patient meet **ALL** of the following criteria?
   - The patient has NOT progressed to moderate or severe Alzheimer's disease (dementia with moderate to severe functional impairment) as assessed by Mini Mental Status Exam or Clinical Dementia Rating (CDR-SB) scale and functional status (ADL impairment)
   - Kisunla will NOT be used concurrently with any other anti-amyloid agent (e.g., Leqembi [lecanemab-irmb], Leqembi IQLIK [lecanemab-irmb]), anticoagulant (e.g., warfarin, Xarelto [rivaroxaban], Pradaxa [dabigatran], Eliquis [apixaban], Savaysa [edoxaban]), or dual therapy antiplatelet (e.g. Plavix [clopidogrel] with aspirin) (monotherapy antiplatelet is acceptable)

   If yes, continue to #4.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

4. Has the patient shown evidence of amyloid-related imaging abnormalities (ARIA) on an MRI scan?

   If yes, continue to #5.
   If no, **approve for 12 months by HICL or GPI-10 with a quantity limit of #80mL per 28 days.**

CONTINUED ON NEXT PAGE

DONANEMAB-AZBT

RENEWAL CRITERIA (CONTINUED)

5. Does the patient have amyloid-related imaging abnormalities with edema/effusion (ARIA-E) or amyloid-related imaging abnormalities with hemorrhage or superficial siderosis (ARIA-H) and meet **ALL** of the following criteria?
   - The patient does NOT have severe symptoms (e.g., multiple ARIA episodes, macrohemorrhages, 10 or more microhemorrhages since the start of treatment, 3 or more superficial siderosis since the start of treatment, severe ARIA, need for anticoagulation)
   - The patient has moderate ARIA (with or without symptoms) and the provider has suspended infusions until a repeat MRI shows ARIA-E has resolved or ARIA-H has stabilized, OR the patient has asymptomatic mild ARIA with continued MRI monitoring until ARIA-E has resolved or ARIA-H has stabilized

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #80mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

6. Is this a subsequent renewal request? (**NOTE**: Renewal request after the first renewal approval of 12 months.)

   If yes, continue to #7.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

7. Does the patient meet **ALL** of the following criteria?
   - The patient has NOT progressed to moderate or severe Alzheimer's disease (dementia with moderate to severe functional impairment) as assessed by Mini Mental Status Exam or Clinical Dementia Rating (CDR-SB) scale and functional status (ADL impairment)
   - Kisunla will NOT be used concurrently with any other anti-amyloid agent (e.g., Leqembi [lecanemab-irmb], Leqembi IQLIK [lecanemab-irmb]), anticoagulant (e.g., warfarin, Xarelto [rivaroxaban], Pradaxa [dabigatran], Eliquis [apixaban], Savaysa [edoxaban]), or dual therapy antiplatelet (e.g. Plavix [clopidogrel] with aspirin) (monotherapy antiplatelet is acceptable)

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #80mL per 28 days.**
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

DONANEMAB-AZBT

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DONANEMAB-AZBT (Kisunla)** requires the following rule(s) be met for renewal:

A. You have Alzheimer's disease (a progressive brain disorder that slowly destroys memory and thinking skills)

B. If the request is for the first renewal request, renewal also requires:

1. You have NOT progressed to moderate or severe Alzheimer's disease (dementia [a type of memory disorder] with moderate to severe functional impairment) as assessed by Mini Mental Status Exam (a test used to evaluate memory, thinking, and understanding) or Clinical Dementia Rating (CDR-SB: a tool for evaluating memory loss) scale and functional status (activities of daily living [ADL: basic everyday tasks] impairment)
2. You will NOT use Kisunla concurrently (at the same time) with any other anti-amyloid medication (such as Leqembi [lecanemab-irmb], Leqembi IQLIK [lecanemab-irmb]), anticoagulant (such as warfarin, Xarelto [rivaroxaban], Pradaxa [dabigatran], Eliquis [apixaban], Savaysa [edoxaban]), or dual therapy antiplatelet (such as Plavix [clopidogrel] with aspirin) (monotherapy [one medication treatment] antiplatelet is acceptable)

(Renewal denial text continued on next page)

CONTINUED ON NEXT PAGE

Copyright © 2026 MedImpact Healthcare Systems, Inc. All rights reserved. This document is proprietary to MedImpact. MedImpact maintains the sole and exclusive ownership, right, title, and interest in and to this document.

RENEWAL CRITERIA (CONTINUED)

3. You meet ONE of the following:
   a. You do NOT have evidence of amyloid-related imaging abnormalities (ARIA: abnormal differences in the brain) on a magnetic resonance imaging (MRI: a type of imaging) scan
   b. You have a magnetic resonance imaging (MRI: a type of imaging) scan showing amyloid-related imaging abnormalities with edema/effusion (ARIA-E: a type of brain swelling) or amyloid-related imaging abnormalities with hemorrhage or superficial siderosis (ARIA-H: a type of small bleed in the brain) and meet ALL of the following:
      i. You do NOT have severe symptoms (such as multiple amyloid-related imaging abnormalities [ARIA: abnormal differences in the brain] episodes, macrohemorrhages [large amount of bleeding in the brain], 10 or more microhemorrhages [small amount of bleeding in the brain] since the start of treatment, 3 or more superficial siderosis [a type of small bleeds in the brain] since the start of treatment, severe ARIA, need for anticoagulation [a type of treatment to thin the blood])
      ii. You have moderate amyloid-related imaging abnormalities (ARIA: abnormal differences in the brain) (with or without symptoms) and your doctor has suspended (stopped) infusions until a repeat magnetic resonance imaging (MRI: a type of imaging) scan shows amyloid-related imaging abnormalities with edema/effusion (ARIA-E: a type of brain swelling) has resolved or amyloid-related imaging abnormalities with hemorrhage or superficial siderosis (ARIA-H: a type of small bleed in the brain) has stabilized, OR you have asymptomatic (showing no symptoms) mild ARIA with continued MRI monitoring until ARIA-E has resolved or ARIA-H has stabilized

C. If the request is a subsequent renewal request, renewal also requires:

1. You have NOT progressed to moderate or severe Alzheimer's disease (dementia [a type of memory disorder] with moderate to severe functional impairment) as assessed by Mini Mental Status Exam (a test used to evaluate memory, thinking, and understanding) or Clinical Dementia Rating (CDR-SB: a tool for evaluating memory loss) scale and functional status (activities of daily living [ADL: basic everyday tasks] impairment)
2. You will NOT use Kisunla concurrently (at the same time) with any other anti-amyloid medication (such as Leqembi [lecanemab-irmb], Leqembi IQLIK [lecanemab-irmb]), anticoagulant (such as warfarin, Xarelto [rivaroxaban], Pradaxa [dabigatran], Eliquis [apixaban], Savaysa [edoxaban]), or dual therapy antiplatelet (such as Plavix [clopidogrel] with aspirin) (monotherapy [one medication treatment] antiplatelet is acceptable)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

DONEPEZIL

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DONEPEZIL HCL	ADLARITY		52053 52054	GPI-14 (62051025108820, 62051025108830)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of dementia associated with Alzheimer's disease (ICD-10 Group G30) and meet **ALL** of the following criteria?
   - The patient had a trial of or contraindication to TWO generic oral acetylcholinesterase inhibitors (e.g., donepezil, galantamine)
   - The patient had a trial of or contraindication to ONE generic acetylcholinesterase inhibitor patch (e.g., rivastigmine)

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with a quantity limit of #4 per 28 days.**

   If no, do not approve.
   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DONEPEZIL (Adlarity)** requires the following rule(s) be met for approval:
   A. You have dementia (a type of memory disorder) associated with Alzheimer's disease (a type of brain disorder)
   B. You have tried or have a contraindication to (harmful for you to use) TWO generic oral acetylcholinesterase inhibitors (such as donepezil, galantamine)
   C. You have tried or have a contraindication to (harmful for you to use) ONE generic acetylcholinesterase inhibitor patch (such as rivastigmine)

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

DONIDALORSEN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DONIDALORSEN SODIUM	DAWNZERA	50832		GPI-10 (8547002070)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
- The patient is 12 years of age or older
- Dawnzera will be used for prophylaxis against HAE attacks
- Therapy is prescribed by or in consultation with an allergist, immunologist, hematologist, or pulmonologist
- Dawnzera will NOT be used concurrently with an alternative prophylactic agent for HAE attacks (e.g., Takhzyro [lanadelumab-flyo], Haegarda [C1 esterase inhibitor], Cinryze [C1 esterase inhibitor], Orladeyo [berotralstat], danazol, Andembry [garadacimab-gxii])

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient have Type I or II HAE **AND** meet the following criterion?
- The diagnosis is confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

3. Does the patient have HAE-nC1INH (Type III HAE) as confirmed by **ALL** of the following criteria?
- The patient has recurrent, non-urticarial angioedema involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated HAE AND the attacks cannot be explained by histaminergic/urticarial angioedema
- Other causes of angioedema have been excluded, including ACE-inhibitor/ARB-associated angioedema, acquired C1-INH deficiency, and mast-cell/histaminergic angioedema

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

DONIDALORSEN

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DONIDALORSEN (Dawnzera)** requires the following rule(s) be met for approval:

A. You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
B. You are 12 years of age or older
C. Dawnzera will be used for the prevention of hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks
D. Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), immunologist (a type of immune system doctor), hematologist (a type of blood doctor), or pulmonologist (lung/breathing doctor)
E. You will NOT use Dawnzera concurrently (at the same time) with an alternative preventive medication for hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Takhzyro [lanadelumab-flyo], Haegarda [C1 esterase inhibitor], Cinryze [C1 esterase inhibitor], Orladeyo [berotralstat], danazol, Andembry [garadacimab- gxii])
F. You meet ONE of the following:
    1. You have Type I or II hereditary angioedema (a type of gene condition with severe body swelling), as confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q (types of lab tests)
    2. You have HAE-nC1INH (hereditary angioedema with normal C1 inhibitor) (Type III hereditary angioedema) (a type of gene condition with severe body swelling) as confirmed by ALL of the following:
        a. You have recurrent (condition continues to return), non-urticarial angioedema (a type of swelling without hives) involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated hereditary angioedema (a type of gene condition with severe body swelling) AND the attacks cannot be explained by histaminergic/urticarial angioedema (a type of swelling due to an allergic reaction)
        b. Other causes of angioedema (a type of swelling) have been ruled out, including angiotensin-converting enzyme (ACE)-inhibitor/angiotensin receptor blocker (ARB)-associated angioedema (a type of swelling due to types of medications), acquired C1-INH deficiency (a type of condition that causes swelling), and mast-cell/histaminergic angioedema (a type of swelling due to an allergic reaction)

PRIOR AUTHORIZATION GUIDELINES

DONIDALORSEN

RENEWAL CRITERIA

1. Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?

- The patient has experienced an improvement in HAE attacks (reductions in attack frequency or attack severity) compared to baseline
- Dawnzera will NOT be used concurrently with an alternative prophylactic agent for HAE attacks (e.g., Takhzyro [lanadelumab-flyo], Haegarda [C1 esterase inhibitor], Cinryze [C1 esterase inhibitor], Orladeyo [berotralstat], danazol, Andembry [garadacimab-gxii])

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DONIDALORSEN (Dawnzera)** requires the following rule(s) be met for renewal:

A. You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
B. You have experienced an improvement in hereditary angioedema (a type of gene condition with severe body swelling) attacks (reductions in attack frequency or attack severity) compared to baseline (before treatment)
C. You will NOT use Dawnzera concurrently (at the same time) with an alternative preventive medication for hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Takhzyro [lanadelumab-flyo], Haegarda [C1 esterase inhibitor], Cinryze [C1 esterase inhibitor], Orladeyo [berotralstat], danazol, Andembry [garadacimab- gxii])

DROXIDOPA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DROXIDOPA (Northera)** requires the following rule(s) be met for approval:

A. You have neurogenic orthostatic hypotension (nOH: a type of low blood pressure)
B. Your condition is caused by primary autonomic failure (Parkinson's disease [PD: a type of movement disorder], multiple system atrophy [a type of nervous system disorder], or pure autonomic failure [a type of nervous system disorder]), dopamine beta-hydroxylase deficiency (type of genetic disorder), or non-diabetic autonomic neuropathy (a type of nerve disorder)
C. You are 18 years of age or older
D. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) or cardiologist (a type of heart doctor)
E. You have tried or have a contraindication to (harmful for you to use) midodrine or fludrocortisone
F. Your doctor performed baseline blood pressure readings while you are sitting and also within 3 minutes of standing from a supine (lying face up) position
G. You have experienced a decrease of at least 20 mmHg in systolic blood pressure or 10 mmHg diastolic blood pressure within 3 minutes after standing from a sitting position
H. You have persistent symptoms of neurogenic orthostatic hypotension, which include dizziness, lightheadedness, and the feeling of 'blacking out'

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DROXIDOPA

RENEWAL CRITERIA

1. Does the patient have a diagnosis of neurogenic orthostatic hypotension (nOH) (ICD-10 G90.3) and meet **ALL** of the following criteria?
   - The patient has demonstrated improvement in severity from baseline symptoms of dizziness, lightheadedness, feeling faint, or feeling like the patient may black out
   - The patient has experienced an increase in systolic blood pressure from baseline of at least 10 mmHg upon standing from a supine (lying face up) position

   If yes, **approve for 3 months by HICL or GPI-10 with a quantity limit of #6 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DROXIDOPA (Northera)** requires the following rule(s) be met for renewal:
   A. You have neurogenic orthostatic hypotension (nOH: a type of low blood pressure)
   B. You have demonstrated improvement in severity from baseline symptoms of dizziness, lightheadedness, feeling faint, or feeling like you may black out
   C. You have experienced an increase in systolic blood pressure from baseline of at least 10 mmHg upon standing from a supine (lying face up) position

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

PRIOR AUTHORIZATION GUIDELINES

DUPILUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DUPILUMAB	DUPIXENT	44180		GPI-10 (9027302000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of moderate to severe atopic dermatitis (AD) (ICD-10 Group L20) and meet **ALL** of the following criteria?
   - The patient is 6 months of age or older
   - Therapy is prescribed by or in consultation with a dermatologist, allergist, or immunologist
   - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Adbry [tralokinumab-ldrm]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Eucrisa (crisaborole)]) for the treatment of AD

   If yes, continue to #2.
   If no, continue to #4.

2. Does the patient meet **ONE** of the following criteria?
   - The patient was previously stable on another biologic (e.g., Rinvoq [upadacitinib]) and is switching to Dupixent
   - The patient has atopic dermatitis involving at least 10 percent of body surface area (BSA)
   - The patient has atopic dermatitis affecting the face, head, neck, hands, feet, groin, or intertriginous areas

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

3. Has the patient had a trial of or contraindication to **ONE** of the following clinical standard of care therapies?
   - Topical corticosteroid (e.g., hydrocortisone, clobetasol propionate, halobetasol propionate)
   - Topical calcineurin inhibitor (e.g., Elidel [pimecrolimus], Protopic [tacrolimus])
   - Topical PDE-4 inhibitor (e.g., Eucrisa [crisaborole], Adquey [difamilast], Zoryve [roflumilast])
   - Topical AhR agonist (e.g., Vtama [tapinarof])
   - Topical JAK inhibitor (e.g., Opzelura [ruxolitinib])
   - Phototherapy

   If yes, **approve for 6 months by GPID or GPI-14 for all formulations of the following strengths:**
   - **200mg/1.14mL: #2.28mL per 28 days.**
   - **300mg/2mL: #4mL per 28 days.**

   (Please enter a 1 month approval by GPID or GPI-14 for all formulations of the following strengths:
   - **200mg/1.14mL: #4.56mL per 28 days.**
   - **300mg/2mL: #8mL per 28 days.)**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

4. Does the patient have a diagnosis of moderate to severe asthma with an eosinophilic phenotype (ICD-10 J82.83) and meet **ALL** of the following criteria?
   - The patient has a pre-treatment blood eosinophil level of 150 to 1500 cells/mcL
   - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of eosinophilic phenotype asthma

   If yes, continue to #6.
   If no, continue to #5.

5. Does the patient have a diagnosis of moderate to severe oral corticosteroid-dependent asthma (ICD-10 J45.909) **AND** meet the following criterion?
   - Dupixent will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of oral corticosteroid-dependent asthma

   If yes, continue to #6.
   If no, continue to #9.

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

6. Does the patient meet **ALL** of the following criteria?
   - The patient is 6 years of age or older
   - Therapy is prescribed by or in consultation with a physician specializing in pulmonary or allergy medicine
   - Dupixent will be used in combination with a medium, high-dose, or maximally tolerated dose of an inhaled corticosteroid (ICS) (e.g., beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (e.g., a long-acting inhaled beta2-agonist [e.g., salmeterol, formoterol], a long-acting muscarinic antagonist [e.g., Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [e.g., montelukast, zafirlukast], theophylline)

   If yes, continue to #7.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

7. Does the patient meet **ONE** of the following criteria?
   - The patient has experienced at least ONE asthma exacerbation requiring systemic corticosteroid (e.g., prednisone) burst lasting at least 3 days within the past 12 months
   - The patient has experienced at least ONE serious asthma exacerbation requiring hospitalization or an emergency room visit within the past 12 months

   If yes, **approve for 4 months by GPID or GPI-14 for all formulations of the following strengths:**
   - **200mg/1.14mL: #2.28mL per 28 days.**
   - **300mg/2mL: #4mL per 28 days.**

   (Please enter a 1 month approval by GPID or GPI-14 for all formulations of the following strengths:
   - **200mg/1.14mL: #4.56mL per 28 days.**
   - **300mg/2mL: #8mL per 28 days.)**

   If no, continue to #8.

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

8. Does the patient have poor symptom control despite current therapy as evidenced by at least **THREE** of the following within the past 4 weeks?
   - Daytime asthma symptoms more than twice per week
   - Any night waking due to asthma
   - Use of a short-acting inhaled beta2-agonist (SABA) reliever (e.g., albuterol) for symptoms more than twice per week
   - Any activity limitation due to asthma

   If yes, **approve for 4 months by GPID or GPI-14 for all formulations of the following strengths:**
   - **200mg/1.14mL: #2.28mL per 28 days.**
   - **300mg/2mL: #4mL per 28 days.**

   (Please enter a 1 month approval by GPID or GPI-14 for all formulations of the following strengths:
   - **200mg/1.14mL: #4.56mL per 28 days.**
   - **300mg/2mL: #8mL per 28 days.)**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

9. Does the patient have a diagnosis of chronic rhinosinusitis with nasal polyps (CRSwNP) (ICD-10 Groups J32 and J33) and meet **ALL** of the following criteria?
   - The patient is 12 years of age or older
   - Therapy is prescribed by or in consultation with an otolaryngologist, allergist, or immunologist
   - There is evidence of nasal polyps by direct examination, endoscopy, or sinus CT scan
   - The patient has inadequately controlled disease
   - The patient had a 56-day trial of ONE clinical standard of care agent: an intranasal corticosteroid (e.g., mometasone nasal spray)
   - Dupixent will be used as add-on maintenance treatment (in conjunction with maintenance intranasal steroids)
   - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of CRSwNP

   If yes, **approve for 6 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**

   If no, continue to #10.

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

10. Does the patient have a diagnosis of eosinophilic esophagitis (EoE) (ICD-10 K20.0) and meet **ALL** of the following criteria?
- The patient is 1 year of age or older
- The patient weighs at least 15 kg (33 lbs)
- Therapy is prescribed by or in consultation with a gastroenterologist, allergist, or immunologist
- The patient had a trial of or contraindication to dietary therapy
- The patient had a trial of or contraindication to the clinical standard of care agent: a proton pump inhibitor (e.g., omeprazole, lansoprazole, pantoprazole)
- Dupixent will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of EoE

If yes, **approve for 6 months by GPID or GPI-14 for all formulations of the following strengths:**
- **200mg/1.14mL: #2.28mL per 28 days.**
- **300mg/2mL: #8mL per 28 days.**

If no, continue to #11.

11. Does the patient have a diagnosis of prurigo nodularis (PN) (ICD-10 L28.1) and meet **ALL** of the following criteria?
- The patient is 18 years of age or older
- Therapy is prescribed by or in consultation with a dermatologist, immunologist, or allergist
- The patient has the presence of multiple pruriginous lesions (localized or general)
- The patient had a trial of or contraindication to ONE of the following clinical standard of care agents: topical capsaicin, topical ketamine/amitriptyline/lidocaine, gabapentinoids (e.g., gabapentin, pregabalin), antidepressants (SNRI, SSRI, TCA), k-/mu-opioid receptor antagonists (e.g., naltrexone, butorphanol), thalidomide, topical corticosteroids, topical calcineurin inhibitors, topical calcipotriol, intralesional corticosteroids, phototherapy, methotrexate, cyclosporine, azathioprine
- Dupixent will NOT be used concurrently with another systemic biologic (e.g., Nemluvio [nemolizumab-ilto]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of PN

If yes, **approve for 6 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**
(Please enter a 1 month approval by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #8mL per 28 days.)

If no, continue to #12.

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

12. Does the patient have a diagnosis of chronic obstructive pulmonary disease (COPD) (ICD-10 Group J44 except for ICD-10 J44.0 and ICD-10 J44.81) and meet **ALL** of the following criteria?
    - The patient is 18 years of age or older
    - The patient has an eosinophilic phenotype COPD
    - Therapy is prescribed by or in consultation with a pulmonologist
    - The patient has a blood eosinophil level of at least 300 cells/mcL
    - Dupixent will be used in combination with a long-acting muscarinic antagonist (LAMA)/long-acting beta-2-agonist (LABA)/inhaled corticosteroid (ICS) (e.g., Trelegy Ellipta, Breztri Aerosphere)
    - Dupixent will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Daliresp (roflumilast)]) for the treatment of eosinophilic phenotype COPD

    If yes, **approve for 4 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**

    If no, continue to #13.

13. Does the patient have a diagnosis of chronic spontaneous urticaria (CSU; also called chronic idiopathic urticaria [CIU]) (ICD-10 L50.1, L50.8, L50.9) and meet **ALL** of the following criteria?
    - The patient is 2 years of age or older
    - Therapy is prescribed by or in consultation with an allergist, dermatologist, or immunologist
    - The patient still experiences hives or angioedema on most days of the week for at least 6 weeks
    - The patient had a trial of and is maintained on, OR has a contraindication to, 4-times the maximally labeled dose of a second generation H1 antihistamine (Zyrtec [cetirizine] dose of 40mg/day, Xyzal [levocetirizine] dose of 20mg/day, Claritin [loratadine] dose of 40mg/day, Clarinex [desloratadine] dose of 20mg/day, or Allegra [fexofenadine] dose of 720mg/day)
    - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Xolair [omalizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of chronic spontaneous urticaria (chronic idiopathic urticaria)

    If yes, **approve for 6 months by GPID or GPI-14 for all formulations of the following strengths:**
    - **200mg/1.14mL: #2.28mL per 28 days.**
    - **300mg/2mL: #4mL per 28 days.**

    (Please enter a 1 month approval by GPID or GPI-14 for all formulations of the following strengths:
    - **200mg/1.14mL: #4.56mL per 28 days.**
    - **300mg/2mL: #8mL per 28 days.)**

    If no, continue to #14.

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

14. Does the patient have a diagnosis of bullous pemphigoid (BP) (ICD-10 L12.0) **AND** meet the following criterion?
    - The patient is 18 years of age or older

    If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**
    (Please enter a 1 month approval by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #8mL per 28 days.)
    - **SUBSEQUENT REQUESTS: Approve for 12 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**

    If no, continue to #15.

15. Does the patient have a diagnosis of allergic fungal rhinosinusitis (AFRS) (ICD-10 J30.89) and meet **ALL** of the following criteria?
    - The patient is 6 years of age or older
    - The patient has a history of sino-nasal surgery
    - The patient has inadequately controlled disease post endoscopic sinus surgery
    - Therapy is prescribed by or in consultation with an otolaryngologist or allergist/immunologist
    - The patient had a 56-day trial of ONE clinical standard of care agent: an intranasal corticosteroid (e.g., mometasone nasal spray, fluticasone nasal spray, beclomethasone nasal spray)

    If yes, **approve for 6 months by GPID or GPI-14 for all formulations of the following strengths:**
    - **200mg/1.14mL: #2.28mL per 28 days.**
    - **300mg/2mL: #4mL per 28 days.**

    If no, do not approve.
    DENIAL TEXT: See the initial denial text at the end of the guideline.

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: Our guideline named **DUPILUMAB (Dupixent)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Moderate to severe atopic dermatitis (AD: a type of skin condition)
   2. Moderate to severe asthma (a type of lung condition)
   3. Chronic rhinosinusitis with nasal polyps (CRSwNP: inflammation of nasal and sinus ways with small growths in the nose)
   4. Eosinophilic esophagitis (EoE: a type of immune system disorder)
   5. Prurigo nodularis (PN: a type of skin condition)
   6. Chronic obstructive pulmonary disease (COPD: a type of long-term lung condition)
   7. Chronic spontaneous urticaria (also called chronic idiopathic urticaria) [severe itching with unknown cause]
   8. Bullous pemphigoid (BP: a type of skin condition)
   9. Allergic fungal rhinosinusitis (AFRS: inflammation of nasal and sinus ways due to an allergic reaction to fungi)

B. If you have moderate to severe atopic dermatitis, approval also requires:
   1. You are 6 months of age or older
   2. Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor), allergist (a type of allergy doctor), or immunologist (a type of immune system doctor)
   3. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Adbry [tralokinumab-ldrm]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Eucrisa (crisaborole)]) for the treatment of atopic dermatitis
   4. You meet ONE of the following:
      a. You were previously stable on another biologic (such as Rinvoq [upadacitinib]) and are switching to Dupixent
      b. You have atopic dermatitis (a type of skin condition) involving at least 10 percent of body surface area (BSA)
      c. You have atopic dermatitis (a type of skin condition) affecting the face, head, neck, hands, feet, groin, or intertriginous areas (between skin folds)
   5. You have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care therapies: topical corticosteroid (such as hydrocortisone, clobetasol propionate, halobetasol propionate), topical calcineurin inhibitor (such as Elidel [pimecrolimus], Protopic [tacrolimus]), topical PDE-4 inhibitor (such as Eucrisa [crisaborole], Adquey [difamilast], Zoryve [roflumilast]), topical aryl hydrocarbon receptor (AhR) agonist (such as Vtama [tapinarof]), topical JAK inhibitor (such as Opzelura [ruxolitinib]), phototherapy (light therapy)

(Initial denial text continued on next page)

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

C. If you have moderate to severe asthma, approval also requires:

1. You are 6 years of age or older
2. Therapy is prescribed by or in consultation with a physician specializing in pulmonary (relating to lungs/breathing) medicine or allergy medicine
3. You meet ONE of the following:
   a. You have an eosinophilic phenotype asthma (a type of inflammatory asthma) and meet all of the following:
      i. You have a pre-treatment blood eosinophil level (a type of lab test) of 150 to 1500 cells/mcL
      ii. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic phenotype asthma
   b. You have oral corticosteroid-dependent asthma, AND you will NOT use Dupixent concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of oral corticosteroid-dependent asthma
4. Dupixent will be used in combination with a medium, high-dose, or maximally tolerated dose of an inhaled corticosteroid (such as beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (taken on a regular basis) (such as a long-acting inhaled beta2-agonist [such as salmeterol, formoterol], a long-acting muscarinic antagonist [such as Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [such as montelukast, zafirlukast], theophylline)
5. You meet ONE of the following:
   a. You have experienced at least ONE asthma exacerbation (worsening of symptoms) requiring systemic corticosteroid (such as prednisone) burst lasting at least 3 days within the past 12 months
   b. You have experienced at least ONE serious asthma exacerbation requiring a hospitalization or an emergency room visit within the past 12 months
   c. You have poor symptom control despite current therapy as shown by at least THREE of the following within the past 4 weeks:
      i. Daytime asthma symptoms more than twice per week
      ii. Any night waking due to asthma
      iii. Use of a short-acting inhaled beta2-agonist reliever (such as albuterol) for symptoms more than twice per week
      iv. Any activity limitation due to asthma

(Initial denial text continued on next page)

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

D. If you have chronic rhinosinusitis with nasal polyps, approval also requires:
1. You are 12 years of age or older
2. Therapy is prescribed by or in consultation with an otolaryngologist (ear, nose, and throat doctor), allergist (a type of allergy doctor), or immunologist (a type of immune system doctor)
3. There is evidence of nasal polyps (non-cancerous growths) by direct examination, endoscopy (using a small camera), or sinus computed tomography (CT) scan (a type of imaging test)
4. You have inadequately controlled disease
5. You had a 56-day trial of ONE clinical standard of care medication: an intranasal corticosteroid (such as mometasone nasal spray)
6. Dupixent will be used as add-on maintenance treatment (in conjunction [together] with maintenance intranasal steroids [a type of medication used in the nose])
7. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of chronic rhinosinusitis with nasal polyps

E. If you have eosinophilic esophagitis, approval also requires:
1. You are 1 year of age or older
2. You weigh at least 15 kilograms (33 pounds)
3. Therapy is prescribed by or in consultation with a gastroenterologist (a type of doctor who treats digestive conditions), allergist (a type of allergy doctor), or immunologist (a type of immune system doctor)
4. You have tried or have a contraindication to (harmful for you to use) dietary therapy
5. You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: a proton pump inhibitor (such as omeprazole, lansoprazole, pantoprazole)
6. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic esophagitis

(Initial denial text continued on next page)

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

F. If you have prurigo nodularis, approval also requires:
1. You are 18 years of age or older
2. Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor), immunologist (a type of immune system doctor), or allergist (a type of allergy doctor)
3. You have multiple pruriginous lesions (wounds)
4. You have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medications: topical capsaicin, topical ketamine/amitriptyline/lidocaine, gabapentinoids (such as gabapentin, pregabalin), antidepressants (serotonin-norepinephrine reuptake inhibitor [SNRI], selective serotonin reuptake inhibitor [SSRI], tricyclic antidepressant [TCA]), k-/mu-opioid receptor antagonists (such as naltrexone, butorphanol), thalidomide, topical corticosteroids (such as hydrocortisone), topical calcineurin inhibitors (such as Elidel [pimecrolimus]), topical calcipotriol, intralesional corticosteroids, phototherapy (light therapy), methotrexate, cyclosporine, azathioprine
5. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Nemluvio [nemolizumab-ilto]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of prurigo nodularis

G. If you have chronic obstructive pulmonary disease, approval also requires:
1. You are 18 years of age or older
2. You have an eosinophilic phenotype chronic obstructive pulmonary disease (COPD) (a type of inflammatory long-term lung condition)
3. Therapy is prescribed by or in consultation with a pulmonologist (lung/breathing doctor)
4. You have a blood eosinophil level (a type of lab test) of at least 300 cells/mcL
5. Dupixent will be used in combination with a long-acting muscarinic antagonist (LAMA)/long-acting beta-2-agonist (LABA)/inhaled corticosteroid (ICS) (such as Trelegy Ellipta, Breztri Aerosphere)
6. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Daliresp (roflumilast)]) for the treatment of eosinophilic phenotype COPD

(Initial denial text continued on next page)

DUPILUMAB

INITIAL CRITERIA (CONTINUED)

H. If you have chronic spontaneous urticaria (chronic idiopathic urticaria), approval also requires:
1. You are 2 years of age or older
2. Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), dermatologist (a type of skin doctor), or immunologist (a type of immune system doctor)
3. You still experience hives or angioedema (a type of swelling) on most days of the week for at least 6 weeks
4. You have tried and are maintained on (continue to use on a regular basis), OR you have a contraindication to (harmful for you to use), 4-times the maximally labeled dose of a second generation H1 antihistamine (type of allergy medication) (Zyrtec [cetirizine] dose of 40mg/day, Xyzal [levocetirizine] dose of 20mg/day, Claritin [loratadine] dose of 40mg/day, Clarinex [desloratadine] dose of 20mg/day, or Allegra [fexofenadine] dose of 720mg/day)
5. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Xolair [omalizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of chronic spontaneous urticaria (chronic idiopathic urticaria)

I. If you have bullous pemphigoid, approval also requires:
1. You are 18 years of age or older

J. If you have allergic fungal rhinosinusitis, approval also requires:
1. You are 6 years of age or older
2. You have a history of sino-nasal surgery (a type of surgery)
3. You have inadequately controlled disease after endoscopic sinus surgery (a type of surgery)
4. Therapy is prescribed by or in consultation with an otolaryngologist (ear, nose, and throat doctor), allergist (a type of allergy doctor), or immunologist (a type of immune system doctor)
5. You had a 56-day trial of ONE clinical standard of care medication: an intranasal corticosteroid (such as mometasone nasal spray, fluticasone nasal spray, beclomethasone nasal spray)

DUPILUMAB

RENEWAL CRITERIA

NOTE: For the diagnosis of bullous pemphigoid (BP), please refer to the Initial Criteria section.

1. Does the patient have a diagnosis of moderate to severe atopic dermatitis (AD) (ICD-10 Group L20) and meet **ALL** of the following criteria?
   - The patient has shown improvement while on Dupixent
   - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Adbry [tralokinumab-ldrm]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Eucrisa (crisaborole)]) for the treatment of AD

   If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the following strengths:**
   - **200mg/1.14mL: #2.28mL per 28 days.**
   - **300mg/2mL: #4mL per 28 days.**

   If no, continue to #2.

2. Does the patient have a diagnosis of moderate to severe asthma with an eosinophilic phenotype (ICD-10 J82.83) **AND** meet the following criterion?
   - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of eosinophilic phenotype asthma

   If yes, continue to #4.
   If no, continue to #3.

3. Does the patient have a diagnosis of moderate to severe oral corticosteroid-dependent asthma (ICD-10 J45.909) **AND** meet the following criterion?
   - Dupixent will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of oral corticosteroid-dependent asthma

   If yes, continue to #4.
   If no, continue to #6.

CONTINUED ON NEXT PAGE

DUPILUMAB

RENEWAL CRITERIA (CONTINUED)

4. Will the patient continue to use an inhaled corticosteroid (ICS) (e.g., beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (e.g., a long-acting inhaled beta2- agonist [e.g., salmeterol, formoterol], a long-acting muscarinic antagonist [e.g., Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [e.g., montelukast, zafirlukast], theophylline)?

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

5. Has the patient shown a clinical response as evidenced by **ONE** of the following criteria?
   - Reduction in asthma exacerbations from baseline
   - Decreased utilization of rescue medications (e.g., albuterol)
   - Increase in percent predicted FEV1 from pretreatment baseline
   - Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing)

   If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the following strengths:**
   - **200mg/1.14mL: #2.28mL per 28 days.**
   - **300mg/2mL: #4mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

6. Does the patient have a diagnosis of chronic rhinosinusitis with nasal polyps (CRSwNP) (ICD-10 Groups J32 and J33) and meet **ALL** of the following criteria?
   - The patient has shown a clinical benefit compared to baseline (e.g., improvements in nasal congestion, sense of smell, size of polyps)
   - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Nucala [mepolizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of CRSwNP

   If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**

   If no, continue to #7.

CONTINUED ON NEXT PAGE

DUPILUMAB

RENEWAL CRITERIA (CONTINUED)

7. Does the patient have a diagnosis of eosinophilic esophagitis (EoE) (ICD-10 K20.0) and meet **ALL** of the following criteria?
- The patient has shown improvement while on Dupixent (e.g., symptom improvement or achieving histological remission defined as peak esophageal intraepithelial eosinophil count of 6 eos/hpf or less)
- Dupixent will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of EoE

If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the following strengths:**
- **200mg/1.14mL: #2.28mL per 28 days.**
- **300mg/2mL: #8mL per 28 days.**

If no, continue to #8.

8. Does the patient have a diagnosis of prurigo nodularis (PN) (ICD-10 L28.1) and meet **ALL** of the following criteria?
- The patient has had prurigo nodularis improvement (reduction) of pruritus or pruriginous lesions
- Dupixent will NOT be used concurrently with another systemic biologic (e.g., Nemluvio [nemolizumab-ilto]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of PN

If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**

If no, continue to #9.

9. Does the patient have a diagnosis of chronic obstructive pulmonary disease (COPD) (ICD-10 Group J44 except for ICD-10 J44.0 and ICD-10 J44.81) and meet **ALL** of the following criteria?
- The patient has an eosinophilic phenotype COPD
- Dupixent will be used in combination with a long-acting muscarinic antagonist (LAMA)/long-acting beta-2-agonist (LABA)/inhaled corticosteroid (ICS) (e.g., Trelegy Ellipta, Breztri Aerosphere)
- Dupixent will NOT be used concurrently with another systemic biologic or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Daliresp (roflumilast)]) for the treatment of eosinophilic phenotype COPD

If yes, continue to #10.
If no, continue to #11.

DUPILUMAB

RENEWAL CRITERIA (CONTINUED)

10. Has the patient shown a clinical response as evidenced by **ONE** of the following criteria?
    - The patient has a reduction in COPD exacerbations from baseline
    - The patient has a reduction in severity or frequency of COPD-related symptoms (e.g., wheezing, shortness of breath, coughing, sputum production, etc.)
    - The patient has an increase in FEV1 of at least 5 percent from pretreatment baseline

    If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the 300mg/2mL strength with a quantity limit of #4mL per 28 days.**

    If no, do not approve.
    DENIAL TEXT: See the renewal denial text at the end of the guideline.

11. Does the patient have a diagnosis of chronic spontaneous urticaria (CSU; also called chronic idiopathic urticaria [CIU]) (ICD-10 L50.1, L50.8, L50.9) and meet **ALL** of the following criteria?
    - Therapy is prescribed by or in consultation with an allergist, dermatologist, or immunologist
    - The patient is maintained on, OR has a contraindication to, a second generation H1 antihistamine (Zyrtec [cetirizine], Xyzal [levocetirizine], Claritin [loratadine], Clarinex [desloratadine], or Allegra [fexofenadine])
    - Dupixent will NOT be used concurrently with another systemic biologic (e.g., Xolair [omalizumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor) for the treatment of chronic spontaneous urticaria (chronic idiopathic urticaria)

    If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the following strengths:**
    - **200mg/1.14mL: #2.28mL per 28 days.**
    - **300mg/2mL: #4mL per 28 days.**

    If no, continue to #12.

12. Does the patient have a diagnosis of allergic fungal rhinosinusitis (AFRS) (ICD-10 J30.89) **AND** meet the following criterion?
    - The patient has shown clinical benefit compared to baseline (e.g., improvements in nasal congestion, sense of smell, size of polyps)

    If yes, **approve for 12 months by GPID or GPI-14 for all formulations of the following strengths:**
    - **200mg/1.14mL: #2.28mL per 28 days.**
    - **300mg/2mL: #4mL per 28 days.**

    If no, do not approve.
    DENIAL TEXT: See the renewal denial text at the end of the guideline.

DUPILUMAB

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: Our guideline named **DUPILUMAB (Dupixent)** requires the following rule(s) be met for renewal:

A. You have ONE of the following:
   1. Moderate to severe atopic dermatitis (AD: a type of skin condition)
   2. Moderate to severe asthma (a type of lung condition)
   3. Chronic rhinosinusitis with nasal polyps (CRSwNP: inflammation of nasal and sinus ways with small growths in the nose)
   4. Eosinophilic esophagitis (EoE: a type of immune system disorder)
   5. Prurigo nodularis (PN: a type of skin condition)
   6. Chronic obstructive pulmonary disease (COPD: a type of long-term lung condition)
   7. Chronic spontaneous urticaria (also called chronic idiopathic urticaria) [severe itching with unknown cause]
   8. Allergic fungal rhinosinusitis (AFRS: inflammation of nasal and sinus ways due to an allergic reaction to fungi)

B. If you have moderate to severe atopic dermatitis, renewal also requires:
   1. You have shown improvement while on Dupixent
   2. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Adbry [tralokinumab-ldrm]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Eucrisa (crisaborole)]) for the treatment of atopic dermatitis

(Renewal denial text continued on next page)

DUPILUMAB

RENEWAL CRITERIA (CONTINUED)

C. If you have moderate to severe asthma, renewal also requires:

1. You meet ONE of the following:
   a. You have an eosinophilic phenotype asthma (a type of inflammatory asthma), AND you will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic phenotype asthma
   b. You have oral corticosteroid-dependent asthma, AND you will NOT use Dupixent concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of oral corticosteroid-dependent asthma
2. You will continue to use an inhaled corticosteroid (such as beclomethasone, mometasone, budesonide) AND at least ONE other maintenance medication (taken on a regular basis) (such as a long-acting inhaled beta2-agonist [such as salmeterol, formoterol], a long-acting muscarinic antagonist [such as Tudorza (aclidinium), Spiriva (tiotropium), Incruse Ellipta (umeclidinium)], a leukotriene receptor antagonist [such as montelukast, zafirlukast], theophylline)
3. You have shown a clinical response as evidenced by ONE of the following:
   a. You have experienced a decrease in asthma exacerbations (worsening of symptoms) from baseline (before starting Dupixent)
   b. You have decreased your use of rescue medications (such as albuterol)
   c. You have an increase in the percent predicted FEV1 (a type of lung test) from pre-treatment baseline (before starting Dupixent)
   d. You have a decrease in the severity or frequency of asthma-related symptoms (such as wheezing, shortness of breath, coughing)

D. If you have chronic rhinosinusitis with nasal polyps, renewal also requires:

1. You have shown a clinical benefit compared to baseline (such as improvements in nasal congestion, sense of smell, size of polyps)
2. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Nucala [mepolizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of chronic rhinosinusitis with nasal polyps

(Renewal denial text continued on next page)

DUPILUMAB

RENEWAL CRITERIA (CONTINUED)

E. **If you have eosinophilic esophagitis, renewal also requires**:
   1. You have shown improvement while on Dupixent (such as symptom improvement or achieving histological remission defined as peak esophageal intraepithelial eosinophil count of 6 eos/hpf or less [a type of test that evaluates disease status])
   2. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of eosinophilic esophagitis

F. If you have prurigo nodularis, renewal also requires:
   1. You have had prurigo nodularis improvement or reduction of pruritus (itching) or pruriginous lesions (wounds)
   2. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Nemluvio [nemolizumab-ilto]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of prurigo nodularis

G. If you have chronic obstructive pulmonary disease, renewal also requires:
   1. You have an eosinophilic phenotype chronic obstructive pulmonary disease (COPD) (a type of inflammatory long-term lung condition)
   2. Dupixent will be used in combination with a long-acting muscarinic antagonist (LAMA)/long-acting beta-2-agonist (LABA)/inhaled corticosteroid (ICS) (such as Trelegy Ellipta, Breztri Aerosphere)
   3. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Daliresp (roflumilast)]) for the treatment of eosinophilic phenotype COPD
   4. You have shown a clinical response as evidenced by ONE of the following:
      a. You have a reduction (decrease) in COPD exacerbations (worsening of symptoms) from baseline (before starting Dupixent)
      b. You have a reduction in severity or frequency of COPD-related symptoms (such as wheezing, shortness of breath, coughing, sputum [mucus] production)
      c. You have had an increase in FEV1 (a type of lung test) by at least 5 percent from pretreatment baseline (before starting Dupixent)

(Renewal denial text continued on next page)

CONTINUED ON NEXT PAGE

DUPILUMAB

RENEWAL CRITERIA (CONTINUED)

H. If you have chronic spontaneous urticaria (chronic idiopathic urticaria), renewal also requires:
1. Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), dermatologist (a type of skin doctor), or immunologist (a type of immune system doctor)
2. You are maintained on (continue to use on a regular basis), OR you have a contraindication to (harmful for you to use), a second generation H1 antihistamine (type of allergy medication) (Zyrtec [cetirizine], Xyzal [levocetirizine], Claritin [loratadine], Clarinex [desloratadine], or Allegra [fexofenadine])
3. You will NOT use Dupixent concurrently (at the same time) with another systemic biologic (such as Xolair [omalizumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of chronic spontaneous urticaria (chronic idiopathic urticaria)

I. If you have allergic fungal rhinosinusitis, renewal also requires:
1. You have shown a clinical benefit compared to baseline (such as improvements in nasal congestion, sense of smell, size of polyps)

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

DURVALUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DURVALUMAB	IMFINZI	44230		GPI-10 (2135822900)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of non-small cell lung cancer (NSCLC) (ICD-10 Group C34) **AND** meet the following criterion?
- The patient is 18 years of age or older

If yes, continue to #2.
If no, continue to #5.

2. Does the patient have resectable (node positive or tumors are at least 4 cm) cancer and meet **ALL** of the following criteria?
- The patient has no known epidermal growth factor receptor (EGFR) mutations or anaplastic lymphoma kinase (ALK) rearrangements
- Imfinzi will be used in combination with platinum-containing chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin) as neoadjuvant treatment, OR as a single agent as adjuvant treatment after surgery and prior use in combination with platinum-containing chemotherapy

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #3.

3. Does the patient have unresectable Stage III cancer **AND** meet the following criterion?
- The patient's disease has NOT progressed following concurrent platinum-based chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin) and radiation therapy (cCRT)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, continue to #4.

4. Does the patient have metastatic cancer and meet **ALL** of the following criteria?
- The patient does NOT have sensitizing epidermal growth factor receptor (EGFR) mutations or anaplastic lymphoma kinase (ALK) genomic tumor aberrations
- Imfinzi will be used in combination with Imjudo (tremelimumab-actl) and platinum-based chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin)

If yes, **approve for 12 months by HICL or GPI-10.**
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

DURVALUMAB

GUIDELINES FOR USE (CONTINUED)

5. Does the patient have a diagnosis of small cell lung cancer (SCLC) (ICD-10 Group C34) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #6.
   If no, continue to #8.

6. Does the patient have limited-stage (LS) cancer **AND** meet the following criterion?
   - The patient's disease has NOT progressed following concurrent platinum-based chemotherapy (e.g., cisplatin, carboplatin, oxaliplatin) and radiation therapy (cCRT)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #7.

7. Does the patient have extensive-stage (ES) cancer **AND** meet the following criterion?
   - Imfinzi will be used in combination with etoposide, AND either carboplatin or cisplatin

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

8. Does the patient have a diagnosis of locally advanced or metastatic biliary tract cancer (BTC) (ICD-10 Group C24) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Imfinzi will be used in combination with gemcitabine and cisplatin

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #9.

9. Does the patient have a diagnosis of unresectable hepatocellular carcinoma (uHCC) (ICD-10 C22.0) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Imfinzi will be used in combination with Imjudo (tremelimumab-actl)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #10.

DURVALUMAB

GUIDELINES FOR USE (CONTINUED)

10. Does the patient have a diagnosis of primary advanced or recurrent endometrial cancer (ICD-10 C54.1) and meet **ALL** of the following criteria?
    - The patient is 18 years of age or older
    - The patient's cancer is mismatch repair deficient (dMMR), as determined by an FDA-approved test
    - Imfinzi will be used in combination with carboplatin and paclitaxel, OR as a single agent after prior use in combination with carboplatin and paclitaxel

    If yes, **approve for 12 months by HICL or GPI-10.**
    If no, continue to #11.

11. Does the patient have a diagnosis of high-risk non-muscle invasive bladder cancer (NMIBC) and meet **ALL** of the following criteria?
    - The patient is 18 years of age or older
    - The patient is Bacillus Calmette-Guérin (BCG) naive
    - Imfinzi will be used in combination with Bacillus Calmette-Guérin (BCG)

    If yes, **approve for 12 months by HICL or GPI-10.**
    If no, continue to #12.

12. Does the patient have a diagnosis of muscle invasive bladder cancer (MIBC) and meet **ALL** of the following criteria?
    - The patient is 18 years of age or older
    - Imfinzi will be used in combination with gemcitabine and cisplatin as neoadjuvant treatment, OR as a single agent as adjuvant treatment following radical cystectomy and prior use in combination with gemcitabine and cisplatin

    If yes, **approve for 12 months by HICL or GPI-10.**
    If no, continue to #13.

13. Does the patient have a diagnosis of resectable gastric or gastroesophageal junction adenocarcinoma (GC/GEJC) (ICD-10 Group C16) and meet **ALL** of the following criteria?
    - The patient is 18 years of age or older
    - Imfinzi will be used in combination with fluorouracil, leucovorin, oxaliplatin and docetaxel (FLOT) as neoadjuvant and adjuvant treatment, OR as a single-agent after prior use in combination with FLOT

    If yes, **approve for 12 months by HICL or GPI-10.**
    If no, do not approve.
    DENIAL TEXT: See the denial text at the end of the guideline.

DURVALUMAB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **DURVALUMAB (Imfinzi)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Non-small cell lung cancer (NSCLC: a type of lung cancer)
   2. Small cell lung cancer (SCLC: a type of lung cancer)
   3. Locally advanced or metastatic biliary tract cancer (a type of biliary tract cancer that has spread from where it started to nearby tissue or lymph nodes or has spread to other parts of the body)
   4. Unresectable hepatocellular carcinoma (a type of liver cancer that cannot be completely removed by surgery)
   5. Primary advanced or recurrent endometrial cancer (a type of uterus cancer that has spread or has returned after treatment)
   6. High-risk non-muscle invasive bladder cancer (NMIBC: bladder cancer that has not spread to the muscles)
   7. Muscle invasive bladder cancer (MIBC: bladder cancer that has spread to the muscles)
   8. Resectable gastric or gastroesophageal junction adenocarcinoma (GC/GEJC) (a type of digestive system cancer that can be removed by surgery)

B. If you have non-small cell lung cancer, approval also requires:
   1. You are 18 years of age or older
   2. You meet ONE of the following:
      a. Your cancer is resectable (can be removed by surgery) (node positive [has spread to the lymph nodes] or tumors are at least 4 cm); you have no known epidermal growth factor receptor (EGFR: a type of protein) mutations (abnormal change in a type of gene) or anaplastic lymphoma kinase (ALK: a type of enzyme) rearrangements; and Imfinzi will be used in combination with platinum-containing chemotherapy (such as cisplatin, carboplatin, oxaliplatin) as neoadjuvant treatment (given before main treatment), OR as a single agent as adjuvant treatment (additional treatment) after surgery and previous use in combination with platinum-containing chemotherapy
      b. Your cancer is Stage III and unresectable (cannot be completely removed by surgery); and your disease has NOT progressed (worsened) after using concurrent (at the same time) platinum-based chemotherapy (such as cisplatin, carboplatin, oxaliplatin) and radiation therapy (cCRT: concurrent chemoradiotherapy)
      c. Your cancer is metastatic (cancer that has spread to other parts of the body); you do NOT have sensitizing epidermal growth factor receptor (EGFR: a type of protein) mutations (abnormal change in a type of gene) or anaplastic lymphoma kinase (ALK) genomic tumor aberrations (a type of abnormal gene); and Imfinzi will be used in combination with Imjudo (tremelimumab-actl) and platinum-based chemotherapy (such as cisplatin, carboplatin, oxaliplatin)

DURVALUMAB

GUIDELINES FOR USE (CONTINUED)

C. If you have small cell lung cancer, approval also requires:
1. You are 18 years of age or older
2. You meet ONE of the following:
   a. You have limited-stage cancer (LS: cancer that is contained in a single area on one side of the chest) AND your disease has NOT progressed (worsened) following concurrent (at the same time) platinum-based chemotherapy (such as cisplatin, carboplatin, oxaliplatin) and radiation therapy (cCRT: concurrent chemoradiotherapy)
   b. You have extensive-stage cancer (ES: cancer that has spread widely throughout the lungs or other parts of the body) and Imfinzi will be used in combination with etoposide, AND either carboplatin or cisplatin

D. If you have locally advanced or metastatic biliary tract cancer, approval also requires:
1. You are 18 years of age or older
2. Imfinzi will be used in combination with gemcitabine and cisplatin

E. If you have unresectable hepatocellular carcinoma, approval also requires:
1. You are 18 years of age or older
2. Imfinzi will be used in combination with Imjudo (tremelimumab-actl)

F. If you have primary advanced or recurrent endometrial cancer, approval also requires:
1. You are 18 years of age or older
2. Your cancer is mismatch repair deficient (dMMR: a type of gene mutation [abnormal change]), as determined by a Food and Drug Administration (FDA)-approved test
3. Imfinzi will be used in combination with carboplatin and paclitaxel, OR as a single agent after previous use in combination with carboplatin and paclitaxel

G. If you have high-risk non-muscle invasive bladder cancer, approval also requires:
1. You are 18 years of age or older
2. You are Bacillus Calmette-Guérin (BCG: a type of bladder cancer treatment) naive (have not previously used BCG)
3. You will use Imfinzi in combination with Bacillus Calmette-Guérin (BCG)

H. If you have muscle invasive bladder cancer, approval also requires:
1. You are 18 years of age or older
2. Imfinzi will be used in combination with gemcitabine and cisplatin as neoadjuvant treatment (given before main treatment), OR as a single agent as adjuvant treatment (additional treatment) following radical cystectomy (bladder removal surgery) and previous use in combination with gemcitabine and cisplatin

I. If you have resectable gastric or gastroesophageal junction adenocarcinoma, approval also requires:
1. You are 18 years of age or older
2. Imfinzi will be used in combination with fluorouracil, leucovorin, oxaliplatin and docetaxel (FLOT) as neoadjuvant (given before main treatment) and adjuvant (add-on) treatment, OR as a single-agent after prior use in combination with FLOT

PRIOR AUTHORIZATION GUIDELINES

DUVELISIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
DUVELISIB	COPIKTRA	45269		GPI-10 (2153803000)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of relapsed or refractory chronic lymphocytic leukemia (CLL) (ICD-10 Group C91.1) or small lymphocytic lymphoma (SLL) (ICD-10 Group C83.0) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has received at least two prior therapies for CLL or SLL

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **DUVELISIB (Copiktra)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Relapsed or refractory chronic lymphocytic leukemia (CLL: a type of blood cancer that has returned after treatment or did not fully respond to treatment)
      2. Small lymphocytic lymphoma (SLL: a type of blood cancer)
   B. You are 18 years of age or older
   C. You have received at least two prior therapies for chronic lymphocytic leukemia or small lymphocytic lymphoma

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ECALLANTIDE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ECALLANTIDE	KALBITOR	36797		GPI-10 (8584003000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
- The patient is 12 years of age or older
- Kalbitor will be used for the treatment of acute attacks of hereditary angioedema
- Therapy is prescribed by or in consultation with an allergist, immunologist, hematologist, or pulmonologist
- Kalbitor will be administered by a healthcare professional with appropriate medical support to manage anaphylaxis and/or angioedema
- Kalbitor will NOT be used concurrently with other agents used for the treatment of acute HAE attacks (e.g., Berinert [C1 esterase inhibitor], Ruconest [C1 esterase inhibitor], Firazyr [icatibant])

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient have Type I or II HAE **AND** meet the following criterion?
- The diagnosis is confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q

If yes, **approve for 12 months (up to 12 fills) by HICL or GPI-10 with a quantity limit of #12mL per fill.**
If no, continue to #3.

3. Does the patient have HAE-nC1INH (Type III HAE) as confirmed by **ALL** of the following criteria?
- The patient has recurrent, non-urticarial angioedema involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated HAE AND the attacks cannot be explained by histaminergic/urticarial angioedema
- Other causes of angioedema have been excluded, including ACE-inhibitor/ARB-associated angioedema, acquired C1-INH deficiency, and mast-cell/histaminergic angioedema

If yes, **approve for 12 months (up to 12 fills) by HICL or GPI-10 with a quantity limit of #12mL per fill.**

If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

ECALLANTIDE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ECALLANTIDE (Kalbitor)** requires the following rule(s) be met for approval:

A. You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
B. You are 12 years of age or older
C. Kalbitor will be used for the treatment of acute (sudden and severe) attacks of hereditary angioedema (HAE: a type of gene condition with severe body swelling)
D. Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), immunologist (a type of immune system doctor), hematologist (a type of blood doctor), or pulmonologist (lung/breathing doctor)
E. Kalbitor will be administered by a healthcare professional with appropriate medical support to manage anaphylaxis (severe, possible life-threatening allergic reaction) and/or angioedema (a type of swelling)
F. You will NOT use Kalbitor concurrently (at the same time) with other medications used for the treatment of acute hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Berinert [C1 esterase inhibitor], Ruconest [C1 esterase inhibitor], Firazyr [icatibant])
G. You meet ONE of the following:
    1. You have Type I or II hereditary angioedema (a type of gene condition with severe body swelling), as confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q (types of lab tests)
    2. You have HAE-nC1INH (hereditary angioedema with normal C1 inhibitor) (Type III hereditary angioedema) (a type of gene condition with severe body swelling) as confirmed by ALL of the following:
        a. You have recurrent (condition continues to return), non-urticarial angioedema (a type of swelling without hives) involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated hereditary angioedema (a type of gene condition with severe body swelling) AND the attacks cannot be explained by histaminergic/urticarial angioedema (a type of swelling due to an allergic reaction)
        b. Other causes of angioedema (a type of swelling) have been ruled out, including angiotensin-converting enzyme (ACE)-inhibitor/angiotensin receptor blocker (ARB)-associated angioedema (a type of swelling due to types of medications), acquired C1-INH deficiency (a type of condition that causes swelling), and mast-cell/histaminergic angioedema (a type of swelling due to an allergic reaction)

ECALLANTIDE

RENEWAL CRITERIA

1. Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?

- The patient has experienced a reduction in the severity or duration of HAE attacks
- Kalbitor will NOT be used concurrently with other agents used for the treatment of acute HAE attacks (e.g., Berinert [C1 esterase inhibitor], Ruconest [C1 esterase inhibitor], Firazyr [icatibant])

If yes, **approve for 12 months (up to 12 fills) by HICL or GPI-10 with a quantity limit of #12mL per fill.**

If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ECALLANTIDE (Kalbitor)** requires the following rule(s) be met for renewal:

A. You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
B. You have experienced a reduction (decrease) in the severity or duration of hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks
C. You will NOT use Kalbitor concurrently (at the same time) with other medications used for the treatment of acute hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Berinert [C1 esterase inhibitor], Ruconest [C1 esterase inhibitor], Firazyr [icatibant])

RATIONALE

ECULIZUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ECULIZUMAB	SOLIRIS	34618		GPI-10 (8580505000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of Shiga toxin E. coli related hemolytic uremic syndrome (STEC- HUS) (ICD-10 D59.31)?

   If yes, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

   If no, continue to #2.

2. Does the patient have a diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) (ICD-10 D59.5) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a hematologist
   - The patient has flow cytometry demonstrating at least 2 different GPI-protein deficiencies (e.g., CD55, CD59) on at least 2 cell lineages (e.g., erythrocytes, granulocytes) AND a PNH granulocyte clone size of at least 10 percent
   - The patient has tried and failed (as evidenced by hemoglobin levels less than 10.5 g/dL directly following at least 3 months of stable dosing) or has a contraindication to Fabhalta (iptacopan) or Ultomiris (ravulizumab-cwvz)
   - Soliris will NOT be used concurrently with C5 complement inhibitor therapy (e.g., Ultomiris [ravulizumab-cwvz], Piasky [crovalimab-akkz]), C3 complement inhibitor therapy (e.g., Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

   If yes, **approve for a total of 6 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #240mL per 28 days.**
   - **SECOND APPROVAL: Approve for 5 months with a quantity limit of #180mL per 28 days (please enter a start date of 1 day after the end date of the first approval).**

   If no, continue to #3.

3. Does the patient have a diagnosis of atypical hemolytic uremic syndrome (aHUS) (ICD-10 D59.32, D59.39)?

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ECULIZUMAB

INITIAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of generalized myasthenia gravis (gMG) (ICD-10 Group G70.0) and meet **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient has a positive serologic test for the anti-acetylcholine receptor antibody (AChR-Ab+)
   - The patient is Myasthenia Gravis Foundation of America class II, III, or IV
   - The patient had a trial of or contraindication to ONE corticosteroid (e.g., prednisone)
   - Soliris will NOT be used concurrently with another neonatal Fc receptor blocker (e.g., Rystiggo [rozanolixizumab-noli], Vyvgart [efgartigimod alfa-fcab]), complement inhibitor (e.g., Ultomiris [ravulizumab-cwvz], Zilbrysq [zilucoplan]), or CD-19 antibody (e.g., Uplizna [inebilizumab-cdon]) for the treatment of gMG

   If yes, continue to #5.
   If no, continue to #7.

5. Does the patient meet **ONE** of the following criteria?
   - The patient had a trial of or contraindication to TWO non-steroidal immunosuppressive therapies (e.g., azathioprine, cyclophosphamide, methotrexate)
   - The patient had a trial of or contraindication to ONE non-steroidal immunosuppressive therapy if on chronic plasmapheresis or plasma exchange

   If yes, continue to #6.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

6. Does the patient meet **ONE** of the following criteria?
   - The patient is 6 to 17 years of age
   - The patient is 18 years of age or older AND had a trial of or contraindication to ONE of the following preferred agents: Rystiggo (rozanolixizumab-noli), Vyvgart (efgartigimod alfa- fcab)/Vyvgart Hytrulo (efgartigimod-hyaluronidase-qvfc)

   If yes, **approve for a total of 6 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #360mL per 28 days.**
   - **SECOND APPROVAL: Approve for 5 months with a quantity limit of #240mL per 28 days (please enter a start date of 1 day after the end date of the first approval).**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ECULIZUMAB

INITIAL CRITERIA (CONTINUED)

7. Does the patient have a diagnosis of neuromyelitis optica spectrum disorder (NMOSD) (ICD-10 G36.0) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist or ophthalmologist
   - The patient is positive for anti-aquaporin-4 (AQP4) antibodies
   - The patient had a trial of or contraindication to the preferred agent: Ultomiris (ravulizumab-cwvz)
   - Soliris will NOT be used concurrently with another NMOSD agent (e.g., Rituxan [rituximab], Enspryng [satralizumab-mwge], Uplizna [inebilizumab-cdon], Ultomiris [ravulizumab-cwvz])

   If yes, continue to #8.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

8. Does the patient have at least **ONE** of the following core clinical characteristics?
   - Optic neuritis
   - Acute myelitis
   - Area postrema syndrome
   - Acute brainstem syndrome
   - Symptomatic narcolepsy or acute diencephalic clinical syndrome with NMOSD-typical diencephalic MRI lesions
   - Symptomatic cerebral syndrome with NMOSD-typical brain lesions

   If yes, **approve for a total of 12 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #360mL per 28 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #240mL per 28 days (please enter a start date of 1 day after the end date of the first approval).**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ECULIZUMAB

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ECULIZUMAB (Soliris)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Paroxysmal nocturnal hemoglobinuria (PNH: a rare blood disorder)
   2. Atypical hemolytic uremic syndrome (aHUS: a rare blood disorder)
   3. Generalized myasthenia gravis (gMG: a chronic autoimmune disorder)
   4. Neuromyelitis optica spectrum disorder (NMOSD: a type of brain disorder)

B. Soliris (eculizumab) is NOT being used for the treatment of hemolytic uremic syndrome related to Shiga toxin E. coli (a bacteria)

C. If you have paroxysmal nocturnal hemoglobinuria, approval also requires:
   1. You are 18 years of age or older
   2. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
   3. You have flow cytometry (a type of lab test) demonstrating at least 2 different GPI-protein deficiencies (you are missing a certain type of protein, such as CD55, CD59) on at least 2 cell lineages (types of cells, such as erythrocytes [red blood cells], granulocytes [a type of white blood cell]) AND a PNH granulocyte clone size of at least 10 percent
   4. You have tried and failed (as shown by hemoglobin [Hgb: a type of protein in red blood cells] levels less than 10.5 g/dL immediately following at least 3 months of stable dosing) or have a contraindication to (harmful for you to use) Fabhalta (iptacopan) or Ultomiris (ravulizumab-cwvz)
   5. You will NOT use Soliris concurrently (at the same time) with C5 complement inhibitor therapy (such as Ultomiris [ravulizumab-cwvz], Piasky [crovalimab-akkz]), C3 complement inhibitor therapy (such as Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (such as Fabhalta [iptacopan])

(Initial denial text continued on next page)

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ECULIZUMAB

INITIAL CRITERIA (CONTINUED)

D. If you have generalized myasthenia gravis, approval also requires:
1. You are 6 years of age or older
2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
3. You have a positive serologic test for the anti-acetylcholine receptor antibody (AChR-Ab+: a type of blood test that shows you have myasthenia gravis)
4. You have Myasthenia Gravis Foundation of America class II, III, or IV (types of severity of disease)
5. You have tried or have a contraindication to (harmful for you to use) ONE corticosteroid (such as prednisone)
6. You will NOT use Soliris concurrently (at the same time) with another neonatal Fc receptor blocker (such as Rystiggo [rozanolixizumab-noli], Vyvgart [efgartigimod alfa-fcab]), complement inhibitor (such as Ultomiris [ravulizumab-cwvz], Zilbrysq [zilucoplan]), or CD-19 antibody (such as Uplizna [inebilizumab-cdon]) for the treatment of generalized myasthenia gravis
7. You meet ONE of the following:
   a. You have tried or have a contraindication to (harmful for you to use) TWO non-steroidal immunosuppressive therapies (such as azathioprine, cyclophosphamide, methotrexate)
   b. You have tried or have a contraindication to ONE non-steroidal immunosuppressive therapy if you are on chronic plasmapheresis or plasma exchange (types of blood therapy)
8. If you are 18 years of age or older, approval also requires:
   a. You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Rystiggo (rozanolixizumab-noli), Vyvgart (efgartigimod alfa-fcab)/Vyvgart Hytrulo (efgartigimod-hyaluronidase-qvfc)

(Initial denial text continued on next page)

ECULIZUMAB

INITIAL CRITERIA (CONTINUED)

E. If you have neuromyelitis optica spectrum disorder, approval also requires:

1. You are 18 years of age or older
2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) or ophthalmologist (a type of eye doctor)
3. You have a positive test for anti-aquaporin-4 (AQP4: a type of protein) antibodies
4. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Ultomiris (ravulizumab-cwvz)
5. You will NOT use Soliris concurrently (at the same time) with another NMOSD medication (such as Rituxan [rituximab], Enspryng [satralizumab-mwge], Uplizna [inebilizumab-cdon], Ultomiris [ravulizumab-cwvz])
6. You have at least ONE of the following core clinical characteristics:
   a. Optic neuritis (a type of brain disorder)
   b. Acute myelitis (a type of brain disorder)
   c. Area postrema syndrome (a type of brain disorder)
   d. Acute brainstem syndrome (a type of brain disorder)
   e. Symptomatic narcolepsy (a type of sleep condition) or acute diencephalic clinical syndrome (tumor in a part of the brain) with NMOSD-typical diencephalic magnetic resonance imaging (MRI: a type of imaging lab) lesions (affected areas)
   f. Symptomatic cerebral syndrome with NMOSD-typical brain lesions

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ECULIZUMAB

RENEWAL CRITERIA

1. Does the patient have a diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) (ICD-10 D59.5) and meet **ALL** of the following criteria?
   - The patient has experienced a clinical benefit (e.g., reduction in number of blood transfusions, improvement/stabilization of lactate dehydrogenase [LDH] and hemoglobin levels) compared to baseline
   - Soliris will NOT be used concurrently with C5 complement inhibitor therapy (e.g., Ultomiris [ravulizumab-cwvz], Piasky [crovalimab-akkz]), C3 complement inhibitor therapy (e.g., Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #180mL per 28 days.**
   If no, continue to #2.

2. Does the patient have a diagnosis of atypical hemolytic uremic syndrome (aHUS) (ICD-10 D59.32, D59.39)?

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Does the patient have a diagnosis of generalized myasthenia gravis (gMG) (ICD-10 Group G70.0) and meet **ALL** of the following criteria?
   - The patient experienced a clinical benefit compared to baseline according to validated gMG instruments (e.g., Myasthenia Gravis Activities of Daily Living tool, Quantitative Myasthenia Gravis tool)
   - Soliris will NOT be used concurrently with another neonatal Fc receptor blocker (e.g., Rystiggo [rozanolixizumab-noli], Vyvgart [efgartigimod alfa-fcab]), complement inhibitor (e.g., Ultomiris [ravulizumab-cwvz], Zilbrysq [zilucoplan]), or CD-19 antibody (e.g., Uplizna [inebilizumab-cdon]) for the treatment of gMG

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #240mL per 28 days.**
   If no, continue to #4.

ECULIZUMAB

RENEWAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of neuromyelitis optica spectrum disorder (NMOSD) (ICD-10 G36.0) and meet **ALL** of the following criteria?
   - The patient experienced a reduction in relapse frequency compared to baseline
   - Soliris will NOT be used concurrently with another NMOSD agent (e.g., Rituxan [rituximab], Enspryng [satralizumab-mwge], Uplizna [inebilizumab-cdon], Ultomiris [ravulizumab-cwvz])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #240mL per 28 days.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ECULIZUMAB (Soliris)** requires the following rule(s) be met for renewal:

   A. You have ONE of the following:
      1. Paroxysmal nocturnal hemoglobinuria (PNH: a rare blood disorder)
      2. Atypical hemolytic uremic syndrome (aHUS: a rare blood disorder)
      3. Generalized myasthenia gravis (gMG: a chronic autoimmune disorder)
      4. Neuromyelitis optica spectrum disorder (NMOSD: a type of brain disorder)

   B. If you have paroxysmal nocturnal hemoglobinuria, renewal also requires:
      1. You have experienced a clinical benefit (such as a reduction in the number of blood transfusions [adding blood to your body], improvement/stabilization of lactate dehydrogenase [LDH: a type of enzyme] levels and hemoglobin [Hgb: a type of protein in red blood cells] levels) compared to baseline (before treatment)
      2. You will NOT use Soliris concurrently (at the same time) with C5 complement inhibitor therapy (such as Ultomiris [ravulizumab-cwvz], Piasky [crovalimab-akkz]), C3 complement inhibitor therapy (such as Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (such as Fabhalta [iptacopan])

   C. If you have generalized myasthenia gravis, renewal also requires:
      1. You have experienced a clinical benefit compared to baseline (before treatment) according to validated gMG instruments (such as Myasthenia Gravis Activities of Daily Living tool, Quantitative Myasthenia Gravis tool)
      2. You will NOT use Soliris concurrently (at the same time) with another neonatal Fc receptor blocker (such as Rystiggo [rozanolixizumab-noli], Vyvgart [efgartigimod alfa-fcab]), complement inhibitor (such as Ultomiris [ravulizumab-cwvz], Zilbrysq [zilucoplan]), or CD-19 antibody (such as Uplizna [inebilizumab-cdon]) for the treatment of generalized myasthenia gravis

   (Renewal denial text continued on next page)

ECULIZUMAB

RENEWAL CRITERIA (CONTINUED)

D. If you have neuromyelitis optica spectrum disorder, renewal also requires:

1. You have experienced a reduction in relapse frequency compared to baseline (before treatment)
2. You will NOT use Soliris concurrently (at the same time) with another NMOSD medication (such as Rituxan [rituximab], Enspryng [satralizumab-mwge], Uplizna [inebilizumab-cdon], Ultomiris [ravulizumab-cwvz])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Soliris.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ECULIZUMAB-AAGH

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ECULIZUMAB-AAGH	EPYSQLI	49759		GPI-10 (8580505002)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of Shiga toxin E. coli related hemolytic uremic syndrome (STEC- HUS) (ICD-10 D59.31)?

   If yes, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

   If no, continue to #2.

2. Does the patient have a diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) (ICD-10 D59.5) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a hematologist
   - The patient has flow cytometry demonstrating at least 2 different GPI-protein deficiencies (e.g., CD55, CD59) on at least 2 cell lineages (e.g., erythrocytes, granulocytes) AND a PNH granulocyte clone size of at least 10 percent
   - The patient has tried and failed (as evidenced by hemoglobin levels less than 10.5 g/dL directly following at least 3 months of stable dosing) or has a contraindication to Fabhalta (iptacopan) or Ultomiris (ravulizumab-cwvz)
   - Epysqli will NOT be used concurrently with C5 complement inhibitor therapy (e.g., Ultomiris [ravulizumab-cwvz], Piasky [crovalimab-akkz]), C3 complement inhibitor therapy (e.g., Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

   If yes, **approve for a total of 6 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #240mL per 28 days.**
   - **SECOND APPROVAL: Approve for 5 months with a quantity limit of #180mL per 28 days (please enter a start date of 1 day after the end date of the first approval).**

   If no, continue to #3.

3. Does the patient have a diagnosis of atypical hemolytic uremic syndrome (aHUS) (ICD-10 D59.32, D59.39)?

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

ECULIZUMAB-AAGH

INITIAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of generalized myasthenia gravis (gMG) (ICD-10 Group G70.0) and meet **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient has a positive serologic test for the anti-acetylcholine receptor antibody (AChR-Ab+)
   - The patient is Myasthenia Gravis Foundation of America class II, III, or IV
   - The patient had a trial of or contraindication to ONE corticosteroid (e.g., prednisone)
   - Epysqli will NOT be used concurrently with another neonatal Fc receptor blocker (e.g., Rystiggo [rozanolixizumab-noli], Vyvgart [efgartigimod alfa-fcab]), complement inhibitor (e.g., Ultomiris [ravulizumab-cwvz], Zilbrysq [zilucoplan]), or CD-19 antibody (e.g., Uplizna [inebilizumab-cdon]) for the treatment of gMG

   If yes, continue to #5.
   If no, continue to #7.

5. Does the patient meet **ONE** of the following criteria?
   - The patient had a trial of or contraindication to TWO non-steroidal immunosuppressive therapies (e.g., azathioprine, cyclophosphamide, methotrexate)
   - The patient had a trial of or contraindication to ONE non-steroidal immunosuppressive therapy if on chronic plasmapheresis or plasma exchange

   If yes, continue to #6.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

6. Does the patient meet **ONE** of the following criteria?
   - The patient is 6 to 17 years of age
   - The patient is 18 years of age or older AND had a trial of or contraindication to ONE of the following preferred agents: Rystiggo (rozanolixizumab-noli), Vyvgart (efgartigimod alfa- fcab)/Vyvgart Hytrulo (efgartigimod-hyaluronidase-qvfc)

   If yes, **approve for a total of 6 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #360mL per 28 days.**
   - **SECOND APPROVAL: Approve for 5 months with a quantity limit of #240mL per 28 days (please enter a start date of 1 day after the end date of the first approval).**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ECULIZUMAB-AAGH

INITIAL CRITERIA (CONTINUED)

7. Does the patient have a diagnosis of neuromyelitis optica spectrum disorder (NMOSD) (ICD-10 G36.0) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist or ophthalmologist
   - The patient is positive for anti-aquaporin-4 (AQP4) antibodies
   - The patient had a trial of or contraindication to the preferred agent: Ultomiris (ravulizumab-cwvz)
   - Epysqli will NOT be used concurrently with another NMOSD agent (e.g., Rituxan [rituximab], Enspryng [satralizumab-mwge], Uplizna [inebilizumab-cdon], Ultomiris [ravulizumab-cwvz])

   If yes, continue to #8.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

8. Does the patient have at least **ONE** of the following core clinical characteristics?
   - Optic neuritis
   - Acute myelitis
   - Area postrema syndrome
   - Acute brainstem syndrome
   - Symptomatic narcolepsy or acute diencephalic clinical syndrome with NMOSD-typical diencephalic MRI lesions
   - Symptomatic cerebral syndrome with NMOSD-typical brain lesions

   If yes, **approve for a total of 12 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #360mL per 28 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #240mL per 28 days (please enter a start date of 1 day after the end date of the first approval).**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ECULIZUMAB-AAGH

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ECULIZUMAB-AAGH (Epysqli)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Paroxysmal nocturnal hemoglobinuria (PNH: a rare blood disorder)
   2. Atypical hemolytic uremic syndrome (aHUS: a rare blood disorder)
   3. Generalized myasthenia gravis (gMG: a chronic autoimmune disorder)
   4. Neuromyelitis optica spectrum disorder (NMOSD: a type of brain disorder)

B. Epysqli (eculizumab-aagh) is NOT being used for the treatment of hemolytic uremic syndrome related to Shiga toxin E. coli (a bacteria)

C. If you have paroxysmal nocturnal hemoglobinuria, approval also requires:
   1. You are 18 years of age or older
   2. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
   3. You have flow cytometry (a type of lab test) demonstrating at least 2 different GPI-protein deficiencies (you are missing a certain type of protein, such as CD55, CD59) on at least 2 cell lineages (types of cells, such as erythrocytes [red blood cells], granulocytes [a type of white blood cell]) AND a PNH granulocyte clone size of at least 10 percent
   4. You have tried and failed (as shown by hemoglobin [Hgb: a type of protein in red blood cells] levels less than 10.5 g/dL immediately following at least 3 months of stable dosing) or have a contraindication to (harmful for you to use) Fabhalta (iptacopan) or Ultomiris (ravulizumab-cwvz)
   5. You will NOT use Epysqli concurrently (at the same time) with C5 complement inhibitor therapy (such as Ultomiris [ravulizumab-cwvz], Piasky [crovalimab-akkz]), C3 complement inhibitor therapy (such as Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (such as Fabhalta [iptacopan])

(Initial denial text continued on next page)

ECULIZUMAB-AAGH

INITIAL CRITERIA (CONTINUED)

D. If you have generalized myasthenia gravis, approval also requires:

1. You are 6 years of age or older
2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
3. You have a positive serologic test for the anti-acetylcholine receptor antibody (AChR-Ab+: a type of blood test that shows you have myasthenia gravis)
4. You have Myasthenia Gravis Foundation of America class II, III, or IV (types of severity of disease)
5. You have tried or have a contraindication to (harmful for you to use) ONE corticosteroid (such as prednisone)
6. You will NOT use Epysqli concurrently (at the same time) with another neonatal Fc receptor blocker (such as Rystiggo [rozanolixizumab-noli], Vyvgart [efgartigimod alfa-fcab]), complement inhibitor (such as Ultomiris [ravulizumab-cwvz], Zilbrysq [zilucoplan]), or CD-19 antibody (such as Uplizna [inebilizumab-cdon]) for the treatment of generalized myasthenia gravis
7. You meet ONE of the following:
   a. You have tried or have a contraindication to (harmful for you to use) TWO non-steroidal immunosuppressive therapies (such as azathioprine, cyclophosphamide, methotrexate)
   b. You have tried or have a contraindication to ONE non-steroidal immunosuppressive therapy if you are on chronic plasmapheresis or plasma exchange (types of blood therapy)
8. If you are 18 years of age or older, approval also requires:
   a. You have tried or have a contraindication to (harmful for you to use) ONE of the following preferred medications: Rystiggo (rozanolixizumab-noli), Vyvgart (efgartigimod alfa-fcab)/Vyvgart Hytrulo (efgartigimod-hyaluronidase-qvfc)

(Initial denial text continued on next page)

ECULIZUMAB-AAGH

INITIAL CRITERIA (CONTINUED)

E. If you have neuromyelitis optica spectrum disorder, approval also requires:

1. You are 18 years of age or older
2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) or ophthalmologist (a type of eye doctor)
3. You have a positive test for anti-aquaporin-4 (AQP4: a type of protein) antibodies
4. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Ultomiris (ravulizumab-cwvz)
5. You will NOT use Epysqli concurrently (at the same time) with another NMOSD medication (such as Rituxan [rituximab], Enspryng [satralizumab-mwge], Uplizna [inebilizumab-cdon], Ultomiris [ravulizumab-cwvz])
6. You have at least ONE of the following core clinical characteristics:
   a. Optic neuritis (a type of brain disorder)
   b. Acute myelitis (a type of brain disorder)
   c. Area postrema syndrome (a type of brain disorder)
   d. Acute brainstem syndrome (a type of brain disorder)
   e. Symptomatic narcolepsy (a type of sleep condition) or acute diencephalic clinical syndrome (tumor in a part of the brain) with NMOSD-typical diencephalic magnetic resonance imaging (MRI: a type of imaging lab) lesions (affected areas)
   f. Symptomatic cerebral syndrome with NMOSD-typical brain lesions

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ECULIZUMAB-AAGH

RENEWAL CRITERIA

1. Does the patient have a diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) (ICD-10 D59.5) and meet **ALL** of the following criteria?
   - The patient has experienced a clinical benefit (e.g., reduction in number of blood transfusions, improvement/stabilization of lactate dehydrogenase [LDH] and hemoglobin levels) compared to baseline
   - Epysqli will NOT be used concurrently with C5 complement inhibitor therapy (e.g., Ultomiris [ravulizumab-cwvz], Piasky [crovalimab-akkz]), C3 complement inhibitor therapy (e.g., Empaveli [pegcetacoplan]) or Factor B inhibitor therapy (e.g., Fabhalta [iptacopan])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #180mL per 28 days.**

   If no, continue to #2.

2. Does the patient have a diagnosis of atypical hemolytic uremic syndrome (aHUS) (ICD-10 D59.32, D59.39)?

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Does the patient have a diagnosis of generalized myasthenia gravis (gMG) (ICD-10 Group G70.0) and meet **ALL** of the following criteria?
   - The patient experienced a clinical benefit compared to baseline according to validated gMG instruments (e.g., Myasthenia Gravis Activities of Daily Living tool, Quantitative Myasthenia Gravis tool)
   - Epysqli will NOT be used concurrently with another neonatal Fc receptor blocker (e.g., Rystiggo [rozanolixizumab-noli], Vyvgart [efgartigimod alfa-fcab]), complement inhibitor (e.g., Ultomiris [ravulizumab-cwvz], Zilbrysq [zilucoplan]), or CD-19 antibody (e.g., Uplizna [inebilizumab-cdon]) for the treatment of gMG

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #240mL per 28 days.**

   If no, continue to #4.

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

EDARAVONE (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EDARAVONE	RADICAVA, EDARAVONE	44252		GPI-10 (7450903000)	ROUTE = INTRAVEN.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of amyotrophic lateral sclerosis (ALS) (ICD-10 G12.21) and meet **ALL** of the following?
   - Therapy is prescribed by or in consultation with a neurologist or ALS specialist at an ALS Specialty Center or Care Clinic
   - The patient's duration of disease (from onset of symptoms) is 2 years or less
   - The patient has normal respiratory function (e.g., Forced Vital Capacity [FVC] at least 80 percent)
   - The patient has mild to moderate ALS with a score of 2 or higher in all of the following 12 items of the Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R): speech, salivation, swallowing, handwriting, cutting food, dressing and hygiene, turning in bed, walking, climbing stairs, dyspnea, orthopnea, respiratory insufficiency
   - The patient has tried riluzole OR is currently taking riluzole

   If yes, **approve for a total of 6 months by GPID or GPI-14. Please enter two authorizations as follows:**
   - **FIRST APPROVAL: Approve the requested strength for 1 month as follows:**
     - **30mg/100mL: #2800mL per 28 days for 1 fill.**
     - **60mg/100mL: #1400mL per 28 days for 1 fill.**
   - **SECOND APPROVAL: Approve the requested strength for 5 months as follows (please enter a start date of TWO days before the end of the first approval):**
     - **30mg/100mL: #2000mL per 28 days.**
     - **60mg/100mL: #1000mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EDARAVONE (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EDARAVONE (Radicava)** requires the following rule(s) be met for approval:

A. You have amyotrophic lateral sclerosis (ALS: a type of brain and nerve condition)
B. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) or ALS specialist at an ALS Specialty Center or Care Clinic
C. You have had the disease (from onset of symptoms) for 2 years or less
D. You have normal respiratory (breathing) function (such as Forced Vital Capacity [FVC: a type of lung test] of at least 80 percent)
E. You have mild to moderate ALS with a score of 2 or higher in all of the following 12 items of the Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R: a tool for evaluating functional status): speech, salivation, swallowing, handwriting, cutting food, dressing and hygiene, turning in bed, walking, climbing stairs, dyspnea (difficulty breathing), orthopnea (shortness of breath while lying down), respiratory insufficiency (a type of breathing condition)
F. You have tried riluzole OR are currently taking riluzole

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EDARAVONE (NSA)

RENEWAL CRITERIA

1. Does the patient have a diagnosis of amyotrophic lateral sclerosis (ALS) (ICD-10 G12.21) and meet **ALL** of the following criteria?
   - The patient does not require invasive ventilation
   - The patient has improved baseline functional ability as measured by Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R) OR the patient has maintained a score of 2 or greater in all 12 items of ALSFRS-R

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **30mg/100mL: #2000mL per 28 days.**
   - **60mg/100mL: #1000mL per 28 days.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EDARAVONE (Radicava)** requires the following rule(s) be met for renewal:
   A. You have amyotrophic lateral sclerosis (ALS: a type of brain and nerve condition)
   B. You do not require invasive ventilation (inserting a breathing tube into the throat)
   C. You have improved baseline functional ability as measured by Amyotrophic Lateral Sclerosis Functional Rating Scale-Revised (ALSFRS-R: a tool for evaluating functional status) OR you have maintained a score of 2 or greater in all 12 items of ALSFRS-R

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EDARAVONE ORAL

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EDARAVONE	RADICAVA ORS		52318	GPI-14 (74509030001820)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of amyotrophic lateral sclerosis (ALS) (ICD-10 G12.21) and meet **ALL** the following?
   - Therapy is prescribed by or in consultation with a neurologist or ALS specialist at an ALS Specialty Center or Care Clinic
   - The duration of patient's disease (from onset of symptoms) is 2 years or less
   - The patient has a forced vital capacity (FVC) of at least 80%
   - The patient has mild to moderate ALS with a score of 2 or higher in all of the following 12 items of the Amyotrophic Lateral Sclerosis Functional Rating Scale Revised (ALSFRS-R): speech, salivation, swallowing, handwriting, cutting food, dressing and hygiene, turning in bed, walking, climbing stairs, dyspnea, orthopnea, respiratory insufficiency
   - The patient has tried the clinical standard of care agent riluzole OR is currently taking riluzole

   If yes, **enter two approvals by GPID or GPI-14 for a total of 6 months as follows:**
   - **FIRST APPROVAL: Approve for 30 days with a quantity limit of #70mL per 28 days.**
   - **SECOND APPROVAL: Approve for 5 months with a quantity limit of #50mL per 28 days (Enter a start date of 2 days before the end of the first approval).**

   If no, do not approve.

ELACESTRANT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELACESTRANT HCL	ORSERDU	48658		GPI-10 (2140372010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of advanced or metastatic breast cancer (ICD-10 Group C50) and meet **ALL** of the following criteria?
   - The patient's breast cancer is estrogen receptor (ER)-positive, human epidermal growth factor receptor 2 (HER2)-negative with estrogen receptor-1 (ESR1) gene mutation(s) as detected by an FDA-authorized test
   - The patient has had disease progression following at least ONE line of endocrine therapy (e.g., anastrozole, letrozole)
   - Therapy is prescribed by or in consultation with an oncology specialist
   - Orserdu will NOT be used concurrently with another selective estrogen receptor degrader (SERD) (e.g., Veppanu [vepdegestrant], Faslodex [fulvestrant], Inluriyo [imlunestrant])

   If yes, **approve for 6 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **345 mg: #1 per day.**
   - **86 mg: #3 per day.**

   If no, do not approve.

   INITIAL DENIAL TEXT:

   Our guideline named **ELACESTRANT (Orserdu)** requires the following rule(s) be met for approval:
   A. You have advanced or metastatic breast cancer (a type of cancer that has spread from where it started to nearby tissue or lymph nodes or to other parts of the body)
   B. Your breast cancer is estrogen receptor (ER: type of protein)-positive, human epidermal growth factor receptor 2 (HER2: type of protein)-negative with estrogen receptor-1 (ESR1) gene mutation(s) (abnormal changes in a type of gene), as detected by a Food and Drug Administration (FDA)-authorized test
   C. You have had disease progression (worsening) following at least ONE line of endocrine therapy (a type of hormone therapy such as anastrozole, letrozole)
   D. Therapy is prescribed by or in consultation with an oncology specialist (a type of cancer doctor)
   E. You will NOT use Orserdu concurrently (at the same time) with a selective estrogen receptor degrader (SERD: a type of hormone therapy such as Veppanu [vepdegestrant], Faslodex [fulvestrant], Inluriyo [imlunestrant])

ELAFIBRANOR

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELAFIBRANOR	IQIRVO	49672		GPI-10 (5278002000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of primary biliary cholangitis (PBC) (ICD-10 K74.3) as confirmed by at least **TWO** of the following criteria?
   - The patient has an elevated alkaline phosphatase (ALP) level
   - The patient has antimitochondrial antibodies (AMA) OR has other PBC-specific autoantibodies, including sp100 or gp210 if AMA is negative
   - The patient has histologic evidence (obtained by liver biopsy) of non-suppurative destructive cholangitis and destruction of interlobular bile ducts

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a gastroenterologist or hepatologist
   - The patient does NOT have decompensated cirrhosis (Child-Pugh B or C)
   - Iqirvo will NOT be used concurrently with any other second-line PBC treatment (Ocaliva [obeticholic acid], Livdelzi [seladelpar])

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient meet **ONE** of the following criteria?
   - Iqirvo will be used as monotherapy in a patient who is unable to tolerate ursodiol (UDCA: ursodeoxycholic acid)
   - Iqirvo will be used in combination with ursodiol (UDCA: ursodeoxycholic acid) in a patient who had an inadequate response to at least 1 year of treatment with ursodiol (UDCA: ursodeoxycholic acid) monotherapy

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ELAFIBRANOR

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ELAFIBRANOR (Iqirvo)** requires the following rule(s) be met for approval:

A. You have primary biliary cholangitis (PBC: a type of immune system disorder that destroys the bile duct), as confirmed by TWO of the following:
   1. You have an elevated (high) alkaline phosphatase (ALP) level (a type of lab test)
   2. You have antimitochondrial antibodies (AMA: indicator of the body attacking its own cells) or you have other PBC-specific autoantibodies (indicator of the body attacking its own cells), including sp100 or gp210 if AMA is negative
   3. You have histologic evidence (lab data obtained by liver biopsy [removal of cells or tissue from the liver for examination]) of non-suppurative destructive cholangitis and destruction of interlobular bile ducts (symptoms of liver disease)

B. You are 18 years of age or older

C. Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions) or hepatologist (a type of liver doctor)

D. You do NOT have decompensated cirrhosis (a condition where there is liver damage and scarring with major symptoms) (Child-Pugh B or C: a score that evaluates the severity of liver damage)

E. You will NOT use Iqirvo concurrently (at the same time) with any other second-line therapy for PBC (Ocaliva [obeticholic acid], Livdelzi [seladelpar])

F. You meet ONE of the following:
   1. Iqirvo will be used as monotherapy (one drug treatment) if you are unable to tolerate ursodiol (UDCA: ursodeoxycholic acid)
   2. Iqirvo will be used in combination (together) with ursodiol (UDCA: ursodeoxycholic acid) if you had an inadequate (poor) response to at least 1 year of treatment with ursodiol (UDCA: ursodeoxycholic acid) monotherapy (one drug treatment)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ELAFIBRANOR

RENEWAL CRITERIA

1. Does the patient have a diagnosis of primary biliary cholangitis (PBC) (ICD-10 K74.3) and meet **ALL** of the following criteria?
   - The patient has an alkaline phosphatase (ALP) level that is less than 1.67 -times the upper limit of normal AND which has decreased by at least 15% from baseline while on treatment with Iqirvo
   - Iqirvo will NOT be used concurrently with any other second-line PBC treatment (Ocaliva [obeticholic acid], Livdelzi [seladelpar])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELAFIBRANOR (Iqirvo)** requires the following rule(s) be met for renewal:
   A. You have primary biliary cholangitis (PBC: a type of immune system disorder that destroys the bile duct)
   B. You have an alkaline phosphatase (ALP) level (a type of lab test) that is less than 1.67- times the upper limit of normal AND which has decreased by at least 15 percent from baseline while on treatment with Iqirvo
   C. You will NOT use Iqirvo concurrently (at the same time) with any other second-line therapy for PBC (Ocaliva [obeticholic acid], Livdelzi [seladelpar])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ELAGOLIX

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELAGOLIX SODIUM	ORILISSA	45108		GPI-10 (3009003010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Has the patient previously received **ONE** of the following regimens?
   - A 6-month course of Orilissa 200 mg twice daily
   - A 6-month course of Orilissa 150 mg once daily and the patient has moderate hepatic impairment (Child-Pugh Class B)
   - A 24-month course of Orilissa 150 mg once daily and the patient has normal liver function or mild hepatic impairment (Child-Pugh Class A)

   If yes, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

   If no, continue to #2.

2. Does the patient have a diagnosis of moderate to severe pain associated with endometriosis (ICD-10 R52 and Group N80) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with an obstetrician/gynecologist
   - Orilissa will NOT be used concurrently with another GnRH-modulating agent (e.g., Lupron Depot [leuprolide], Synarel [nafarelin], Zoladex [goserelin])

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient have moderate hepatic impairment (Child-Pugh Class B)?

   If yes, **approve 150 mg for 6 months by GPID or GPI-14 with a quantity limit of #1 per day.**
   If no, continue to #4.

ELAGOLIX

INITIAL CRITERIA (CONTINUED)

4. Does the patient meet **ONE** of the following?
   - The patient has normal liver function
   - The patient has mild hepatic impairment (Child-Pugh Class A)

   If yes, **approve for 6 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **150 mg: #1 per day.**
   - **200 mg: #2 per day.**

   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELAGOLIX (Orilissa)** requires the following rule(s) be met for approval:
   A. You have moderate to severe pain associated with endometriosis (condition affecting the uterus)
   B. You are 18 years of age or older
   C. Therapy is prescribed by or in consultation with an obstetrician/gynecologist (a type of women's health doctor)
   D. Orilissa will NOT be used at the same time with another GnRH-modulating agent (such as Lupron Depot [leuprolide], Synarel [nafarelin], Zoladex [goserelin])
   E. You have normal liver function, or mild to moderate hepatic (liver) impairment (Child-Pugh Class A or B: a tool for evaluating severity of liver damage)
   F. Requests for Orilissa 200 mg twice daily will only be approved if you have normal liver function or mild hepatic (liver) impairment (Child-Pugh Class A)
   G. Requests will not be approved if you have previously received ONE of the following:
      1. A 6-month course of Orilissa 200 mg twice daily
      2. A 6-month course of Orilissa 150 mg once daily and you have moderate hepatic (liver) impairment (Child-Pugh Class B)
      3. A 24-month course of Orilissa 150 mg once daily and you have normal liver function or mild hepatic (liver) impairment (Child-Pugh Class A)

ELAGOLIX

RENEWAL CRITERIA

1. Has the patient previously received **ONE** of the following regimens?
   - A 6-month course of Orilissa 200 mg twice daily
   - A 6-month course of Orilissa 150 mg once daily and the patient has moderate hepatic impairment (Child-Pugh Class B)
   - A 24-month course of Orilissa 150 mg once daily and the patient has normal liver function or mild hepatic impairment (Child-Pugh Class A)

   If yes, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

   If no, continue to #2.

2. Does the patient have a diagnosis of moderate to severe pain associated with endometriosis (ICD-10 R52 and Group N80) and meet **ALL** of the following criteria?
   - The patient has improvement of pain related to endometriosis while on therapy
   - The patient has normal liver function OR mild hepatic impairment (Child-Pugh Class A)
   - Orilissa will NOT be used concurrently with another GnRH-modulating agent (e.g., Lupron Depot [leuprolide], Synarel [nafarelin], Zoladex [goserelin])

   If yes, **approve 150 mg for 18 months by GPID or GPI-14 with a quantity limit of #1 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELAGOLIX (Orilissa)** requires the following rule(s) be met for renewal:
   A. You have moderate to severe pain associated with endometriosis (condition affecting the uterus)
   B. You have improvement of pain related to endometriosis while on therapy
   C. You have normal liver function or mild hepatic (liver) impairment (Child-Pugh Class A)
   D. Orilissa will NOT be used at the same time with another GnRH-modulating agent (such as Lupron Depot [leuprolide], Synarel [nafarelin], Zoladex [goserelin])
   E. Requests will not be approved if you have previously received ONE of the following:
      1. A 6-month course of Orilissa 200 mg twice daily
      2. A 6-month course of Orilissa 150 mg once daily and you have moderate hepatic (liver) impairment (Child-Pugh Class B)
      3. A 24-month course of Orilissa 150 mg once daily and you have normal liver function or mild hepatic (liver) impairment (Child-Pugh Class A)

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Has the patient received a total of 24 months cumulative treatment with Oriahnn?

   If yes, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

   If no, continue to #2.

2. Is the request for the management of heavy menstrual bleeding associated with uterine leiomyomas (fibroids) (ICD-10 Group D25) and the patient meets **ALL** of following criteria?
   - The patient is 18 years of age or older
   - The patient is a premenopausal woman
   - Therapy is prescribed by or in consultation with an OB/GYN
   - Oriahnn will NOT be used concurrently with another GnRH-modulating agent (e.g., Myfembree [relugolix/estradiol/norethindrone], Lupron Depot [leuprolide])

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #2 per day.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELAGOLIX/ESTRADIOL/NORETHINDRONE (Oriahnn)** requires the following rule(s) be met for approval:
   A. The request is for the management of heavy menstrual bleeding associated with uterine leiomyomas (fibroids: non-cancerous growths in the uterus)
   B. You are 18 years of age or older
   C. You are a premenopausal (before menopause) woman
   D. Therapy is prescribed by or in consultation with an obstetrician or gynecologist (OB/GYN: a type of women's health doctor)
   E. You will NOT use Oriahnn concurrently (at the same time) with another gonadotropin-releasing hormone (GnRH)-modulating medication (such as Myfembree [relugolix/estradiol/norethindrone], Lupron Depot [leuprolide])
   F. You have not received a total of 24 months cumulative treatment with Oriahnn

ELAPEGADEMASE-LVLR

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELAPEGADEMASE-LVLR	REVCOVI	45340		GPI-10 (3090203020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of adenosine deaminase severe combined immune deficiency (ADA-SCID) (ICD-10 D81.31) as manifested by **ONE** of the following criteria?
   - The patient has a confirmatory genetic test
   - The patient has suggestive laboratory findings (e.g., elevated deoxyadenosine nucleotide [dAXP] levels, lymphopenia) AND hallmark signs/symptoms (e.g., recurrent infections, failure to thrive, persistent diarrhea)

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Is therapy prescribed by or in consultation with an immunologist, hematologist-oncologist, or physician specializing in inherited metabolic disorders?

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient meet **ONE** of the following criteria?
   - The patient has failed or is NOT a candidate for hematopoietic cell transplantation (HCT)
   - Revcovi will be used as a bridging therapy prior to planned hematopoietic cell transplant or gene therapy

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ELAPEGADEMASE-LVLR

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ELAPEGADEMASE-LVLR (Revcovi)** requires the following rule(s) be met for approval:

A. You have adenosine deaminase severe combined immune deficiency (ADA-SCID: an inherited disorder that damages the immune system) as shown by ONE of the following:
   1. You have a confirmatory genetic test
   2. You have suggestive laboratory findings (such as elevated deoxyadenosine nucleotide levels, lymphopenia [low levels of a type of white blood cell]) AND you have hallmark signs/symptoms (such as recurrent infections, failure to thrive, persistent diarrhea)

B. Therapy is prescribed by or in consultation with an immunologist (a type of immune system doctor), hematologist-oncologist (a type of blood-cancer doctor), or physician specializing in inherited metabolic disorders

C. You meet ONE of the following:
   1. You have failed or are not a candidate for hematopoietic cell transplant (blood cell transplant from bone marrow)
   2. Revcovi will be used as a bridging therapy prior to planned hematopoietic cell transplant or gene therapy

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ELBASVIR/GRAZOPREVIR

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELBASVIR/ GRAZOPREVIR	ZEPATIER	43030		GPI-10 (1235990230)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of chronic hepatitis C virus (HCV) (ICD-10 B18.2) and meet **ALL** of the following criteria?
- The patient is 12 years of age or older OR weighs at least 30 kg (66 lbs)
- The patient has genotype 1 or 4 infection

If yes, continue to #2.
If no, continue to #11.

2. Does the patient have an HCV RNA level within the past 6 months?

If yes, continue to #3.
If no, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

3. Does the patient meet **ANY** of the following criteria?
- The patient has a limited life expectancy (less than 12 months) due to non-liver related comorbid conditions
- The patient has moderate or severe hepatic impairment (decompensated cirrhosis; Child-Pugh B or C)
- Zepatier will be used concurrently with any medication with drug interactions that are contraindicated or not recommended per the prescribing information (e.g., phenytoin, carbamazepine, rifampin, efavirenz [e.g., Atripla, Sustiva], atazanavir [e.g., Evotaz, Reyataz], darunavir [e.g., Prezcobix, Prezista], lopinavir, saquinavir, Aptivus [tipranavir], cyclosporine, nafcillin, ketoconazole, modafinil, bosentan, etravirine, elvitegravir/cobicistat/emtricitabine/tenofovir [e.g., Stribild, Genvoya], atorvastatin at doses greater than 20mg daily, rosuvastatin at doses greater than 10mg daily, St. John's wort)
- Zepatier will be used concurrently with Sovaldi (sofosbuvir; as a single agent), Epclusa (velpatasvir/sofosbuvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), or Vosevi (velpatasvir/sofosbuvir/voxilaprevir)

If yes, do not approve.
DENIAL TEXT: See the denial text at the end of the guideline.

If no, continue to #4.

GUIDELINES FOR USE (CONTINUED)

4. Is the patient treatment-naïve **AND** meets the following criterion?
   - The patient had an intolerance or contraindication to ONE of the following preferred agents: Epclusa, Harvoni, Mavyret

   If yes, continue to #5.
   If no, continue to #7.

5. Does the patient meet **ONE** of the following criteria?
   - The patient has genotype 1a infection AND does not have baseline NS5A polymorphisms
   - The patient has genotype 1b infection
   - The patient has genotype 4 infection
   - The patient is post-kidney transplant AND does not have baseline NS5A RAS polymorphisms

   If yes, **approve for 12 weeks by HICL or GPI-10 for #1 per day.**
   If no, continue to #6.

6. Does the patient meet **ALL** of the following criteria?
   - The patient has genotype 1a infection
   - The patient has baseline NS5A polymorphisms
   - Zepatier will be used with ribavirin

   If yes, **approve for 16 weeks by HICL or GPI-10 for #1 per day.**
   If no, continue to #11.

7. Is the patient treatment-experienced **AND** meets the following criterion?
   - The patient had an intolerance or contraindication to ONE of the following preferred agents: Epclusa, Harvoni, Mavyret

   If yes, continue to #8.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

GUIDELINES FOR USE (CONTINUED)

8. Does the patient have genotype 1 infection and meet **ONE** of the following criteria?
   - The patient has genotype 1a infection, without baseline NS5A polymorphisms, AND failed prior treatment with peginterferon/ribavirin
   - The patient has genotype 1b infection AND failed prior treatment with peginterferon/ribavirin
   - The patient failed prior treatment with a peginterferon/ribavirin/protease inhibitor triple regimen AND Zepatier will be used with ribavirin

   If yes, **approve for 12 weeks by HICL or GPI-10 for #1 per day.**
   If no, continue to #9.

9. Does the patient meet **ONE** of the following criteria?
   - The patient has genotype 1a infection with baseline NS5A polymorphisms, failed prior treatment with peginterferon/ribavirin, AND Zepatier will be used with ribavirin
   - The patient has genotype 4 infection, failed prior treatment with peginterferon/ribavirin, AND Zepatier will be used with ribavirin

   If yes, **approve for 16 weeks by HICL or GPI-10 for #1 per day.**
   If no, continue to #10.

10. Is the patient post-kidney transplant and meets **ALL** of the following criteria?
    - The patient failed prior treatment with a non-direct acting antiviral agent (e.g., interferon)
    - The patient does not have baseline NS5A RAS polymorphisms

    If yes, **approve for 12 weeks by HICL or GPI-10 for #1 per day.**
    If no, continue to #11.

11. Is the requested regimen recommended by the American Association for the Study of Liver Diseases (AASLD)/Infectious Diseases Society of America (IDSA) guidance for Hepatitis C Treatment?

    If yes, **approve as indicated per guidance in AASLD/IDSA.**
    If no, do not approve.
    DENIAL TEXT: See the denial text at the end of the guideline.

ELBASVIR/GRAZOPREVIR

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline for **ELBASVIR/GRAZOPREVIR (Zepatier)** requires the following rule(s) be met for approval:

A. You have chronic hepatitis C virus (HCV: liver inflammation caused by a type of virus)
B. You are 12 years of age or older OR weigh at least 30 kilograms (66 pounds)
C. You have genotype 1 or 4 hepatitis C infection (types of hepatitis C virus)
D. You have an HCV RNA level (a measure of the amount of hepatitis C virus in the blood) within the past 6 months
E. You do NOT have a limited life expectancy (less than 12 months) due to non-liver related comorbid conditions (having two or more diseases at the same time)
F. You do NOT have moderate or severe liver impairment (decompensated cirrhosis [a condition where there is liver damage and scarring with major symptoms]; Child-Pugh B or C [a score that evaluates the severity of liver damage])
G. You will NOT use Zepatier concurrently (at the same time) with any medication with drug interactions that are contraindicated (harmful for you to use) or not recommended per the prescribing information (such as phenytoin, carbamazepine, rifampin, efavirenz [such as Atripla, Sustiva], atazanavir [such as Evotaz, Reyataz], darunavir [such as Prezcobix, Prezista], lopinavir, saquinavir, Aptivus [tipranavir], cyclosporine, nafcillin, ketoconazole, modafinil, bosentan, etravirine, elvitegravir/cobicistat/emtricitabine/tenofovir [such as Stribild, Genvoya], atorvastatin at doses greater than 20mg daily, rosuvastatin at doses greater than 10mg daily, St. John's wort)
H. You will NOT use Zepatier concurrently (at the same time) with Sovaldi (sofosbuvir; as a single agent), Epclusa (velpatasvir/sofosbuvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), or Vosevi (velpatasvir/sofosbuvir/voxilaprevir)
I. You had an intolerance (side effect) or contraindication to (harmful for you to use) ONE of the following preferred medications: Epclusa, Harvoni, Mavyret
J. If you are treatment-naive (no prior treatment), approval also requires ONE of the following:
    1. You have genotype 1a infection AND you do not have baseline NS5A polymorphisms (variations in a type of hepatitis C virus protein)
    2. You have genotype 1b infection
    3. You have genotype 4 infection
    4. You received a kidney transplant (replaced your kidney) AND you do not have baseline NS5A resistance-associated substitution (RAS) polymorphisms (variations in a type of hepatitis C virus protein)
    5. You have genotype 1a infection, with baseline NS5A polymorphisms, AND Zepatier will be used with ribavirin

(Denial text continued on next page)

ELBASVIR/GRAZOPREVIR

GUIDELINES FOR USE (CONTINUED)

K. If you are treatment-experienced (failed prior treatment), approval also requires ONE of the following:
1. You have genotype 1a infection, without baseline NS5A polymorphisms (variations in a type of hepatitis C virus protein), AND were previously treated with peginterferon/ribavirin
2. You have genotype 1b infection AND were previously treated with peginterferon/ribavirin
3. You have genotype 1 infection, were previously treated with a peginterferon/ribavirin/protease inhibitor triple regimen, AND Zepatier will be used with ribavirin
4. You have genotype 1a infection with baseline NS5A polymorphisms, were previously treated with peginterferon/ribavirin, AND Zepatier will be used with ribavirin
5. You have genotype 4 infection, were previously treated with peginterferon/ribavirin, AND Zepatier will be used with ribavirin
6. You received a kidney transplant (replaced your kidney), were previously treated with a non-direct acting antiviral (such as interferon), AND you do not have baseline NS5A resistance-associated substitution (RAS) polymorphisms (variations in a type of hepatitis C virus protein)

L. Zepatier will also be approved for any other regimen/condition not listed above that is recommended by the American Association for the Study of Liver Diseases (AASLD)/Infectious Diseases Society of America (IDSA) guidance for Hepatitis C Treatment

---

PRIOR AUTHORIZATION GUIDELINES

ELEXACAFTOR-TEZACAFTOR-IVACAFTOR

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELEXACAFTOR/ TEZACAFTOR/ IVACAFTOR	TRIKAFTA	46112		GPI-10 (4530990340)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of cystic fibrosis (CF) (ICD-10 Group E84) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - Therapy is prescribed by or in consultation with a pulmonologist or cystic fibrosis expert
   - Trikafta will NOT be used concurrently with another cystic fibrosis transmembrane conductance regulator (CFTR) modulator (e.g., medications containing vanzacaftor, deutivacaftor, ivacaftor, lumacaftor, tezacaftor, or elexacaftor)
   - The patient has at least ONE variant in the cystic fibrosis transmembrane conductance regulator (CFTR) gene that is either responsive to Trikafta based on clinical or in vitro data or that results in the production of CFTR protein

   If yes, **approve for 6 months by GPID or GPI-14 for all of the following:**
   - **80-40-60mg granule packets: #2 per day.**
   - **100-50-75mg granule packets: #2 per day.**
   - **50-25-37.5mg tablets: #3 per day.**
   - **100-50-75mg tablets: #3 per day.**

   If no, do not approve.

   INITIAL DENIAL TEXT: ***Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.**

   Our guideline named **ELEXACAFTOR-TEZACAFTOR-IVACAFTOR (Trikafta)** requires the following rule(s) be met for approval:
   A. You have cystic fibrosis (CF: a type of lung disorder)
   B. You are 2 years of age or older
   C. Therapy is prescribed by or in consultation with a pulmonologist (lung/breathing doctor) or cystic fibrosis expert
   D. You will NOT use Trikafta concurrently (at the same time) with another cystic fibrosis transmembrane conductance regulator (CFTR) modulator (such as medications containing vanzacaftor, deutivacaftor, ivacaftor, lumacaftor, tezacaftor, or elexacaftor)
   E. You have at least ONE variant in the cystic fibrosis transmembrane conductance regulator (CFTR) gene (a type of gene) that is either responsive to Trikafta based on clinical or in vitro data (testing outside of the body in a tube) or that results in the production of CFTR protein

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ELEXACAFTOR-TEZACAFTOR-IVACAFTOR

RENEWAL CRITERIA

1. Does the patient have a diagnosis of cystic fibrosis (CF) (ICD-10 Group E84) and meet **ALL** of the following criteria?
   - The patient has experienced an improvement in clinical status
   - Trikafta will NOT be used concurrently with another cystic fibrosis transmembrane conductance regulator (CFTR) modulator (e.g., medications containing vanzacaftor, deutivacaftor, ivacaftor, lumacaftor, tezacaftor, or elexacaftor)

   If yes, **approve for lifetime by GPID or GPI-14 for all of the following:**
   - **80-40-60mg granule packets: #2 per day.**
   - **100-50-75mg granule packets: #2 per day.**
   - **50-25-37.5mg tablets: #3 per day.**
   - **100-50-75mg tablets: #3 per day.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: ***Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.**

   Our guideline named **ELEXACAFTOR-TEZACAFTOR-IVACAFTOR (Trikafta)** requires the following rule(s) be met for renewal:
   A. You have cystic fibrosis (CF: a type of lung disorder)
   B. You have experienced an improvement in your clinical status
   C. You will NOT use Trikafta concurrently (at the same time) with another cystic fibrosis transmembrane conductance regulator (CFTR) modulator (such as medications containing vanzacaftor, deutivacaftor, ivacaftor, lumacaftor, tezacaftor, or elexacaftor)

PRIOR AUTHORIZATION GUIDELINES

ELINZANETANT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELINZANETANT	LYNKUET	50837		GPI-10 (3060631500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of moderate to severe menopausal vasomotor symptoms (VMS) (ICD-10 N95.1) and meet **ALL** of the following criteria?
   - The patient experiences at least 7 hot flashes per day
   - Lynkuet will NOT be used concurrently with another hormonal (e.g., Prempro [conjugated estrogen/medroxyprogesterone]) or non-hormonal (e.g., Veozah [fezolinetant], Brisdelle [paroxetine mesylate]) agent for VMS
   - The patient had a trial of or contraindication to the clinical standard of care agent: hormonal therapy (e.g., estradiol transdermal patch [e.g., Minivelle, Climara], oral conjugated estrogens [e.g., Premarin], micronized progesterone [e.g., Prometrium])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELINZANETANT (Lynkuet)** requires the following rule(s) be met for approval:
   A. You have moderate to severe menopausal vasomotor symptoms (VMS: symptoms related to menopause)
   B. You experience at least 7 hot flashes per day
   C. You will NOT use Lynkuet concurrently (at the same time) with another hormonal (such as Prempro [conjugated estrogen/medroxyprogesterone]) or non-hormonal (such as Veozah [fezolinetant], Brisdelle [paroxetine mesylate]) medication for vasomotor symptoms (symptoms related to menopause)
   D. You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: hormonal therapy (such as estradiol transdermal patch [such as Minivelle, Climara], oral conjugated estrogens [such as Premarin], micronized progesterone [such as Prometrium])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ELTROMBOPAG - ALVAIZ

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ELTROMBOPAG CHOLINE	ALVAIZ	49330		GPI-10 (8240503005)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of persistent or chronic immune (idiopathic) thrombocytopenia (ITP) (ICD-10 D69.3) and meet **ALL** of the following criteria?
   - The patient is 6 years of age or older
   - The patient had a trial of or contraindication to corticosteroids or immunoglobulins, OR had an insufficient response to a splenectomy
   - Alvaiz will NOT be used concurrently with other thrombopoietin receptor agonists (TPO-RAs) (e.g., Promacta [eltrombopag], Doptelet [avatrombopag], Nplate [romiplostim])

   If yes, continue to #2.
   If no, continue to #3.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has a platelet count of less than 30 x 10^9/L
   - The patient has a platelet count of less than 50 x 10^9/L AND a prior bleeding event

   If yes, **approve for 2 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient have a diagnosis of thrombocytopenia due to chronic hepatitis C and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's thrombocytopenia prevents the initiation of interferon-based therapy or limits the ability to maintain interferon-based therapy

   If yes, **approve for 12 months by GPID or GPI-14 for all of the following strengths:**
   - **9mg: #1 per day.**
   - **18mg: #1 per day.**
   - **36mg: #2 per day.**
   - **54mg: #1 per day.**

   If no, continue to #4.

ELTROMBOPAG - ALVAIZ

INITIAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of severe aplastic anemia (ICD-10 D61.9) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient had an insufficient response to immunosuppressive therapy

   If yes, **approve for 12 months by GPID or GPI-14 for all of the following strengths:**
   - **18mg: #1 per day.**
   - **36mg: #2 per day.**
   - **54mg: #2 per day.**

   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELTROMBOPAG - ALVAIZ** requires the following rule(s) be met for approval:

   A. You have ONE of the following:
      1. Persistent or chronic immune (idiopathic) thrombocytopenia (ITP: a type of blood disorder)
      2. Thrombocytopenia (a type of blood disorder) due to chronic hepatitis C (a type of liver infection)
      3. Severe aplastic anemia (a type of blood disorder)

   B. If you have persistent or chronic immune (idiopathic) thrombocytopenia, approval also requires:
      1. You are 6 years of age or older
      2. You have tried or have a contraindication to (harmful for you to use) corticosteroids or immunoglobulins, OR you did not have a good enough response to a splenectomy (spleen removal)
      3. You will NOT use Alvaiz concurrently (at the same time) with other thrombopoietin receptor agonists (TPO-RAs, such as Promacta [eltrombopag], Doptelet [avatrombopag], Nplate [romiplostim])
      4. You meet ONE of the following:
         a. You have a platelet (a type of blood cell) count of less than 30 x 10^9/L
         b. You have a platelet (a type of blood cell) count of less than 50 x 10^9/L AND a prior bleeding event

ELTROMBOPAG - ALVAIZ

RENEWAL CRITERIA

NOTE: For the diagnoses of thrombocytopenia due to chronic hepatitis C or severe aplastic anemia, please refer to the Initial Criteria section.

1. Does the patient have a diagnosis of persistent or chronic immune (idiopathic) thrombocytopenia (ITP) (ICD-10 D69.3) and meet **ALL** of the following criteria?
   - The patient has shown a clinical response to therapy, defined as having an improvement in platelet count from baseline OR a reduction in bleeding events
   - Alvaiz will NOT be used concurrently with other thrombopoietin receptor agonists (TPO-RAs) (e.g., Promacta [eltrombopag], Doptelet [avatrombopag], Nplate [romiplostim])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELTROMBOPAG - ALVAIZ** requires the following rules be met for renewal:
   A. You have persistent or chronic immune (idiopathic) thrombocytopenia (ITP: a type of blood disorder)
   B. You have shown a clinical response to therapy, defined as having an improvement in platelet (a type of blood cell) count from baseline (before starting Alvaiz) OR a decrease in bleeding events
   C. You will NOT use Alvaiz concurrently (at the same time) with other thrombopoietin receptor agonists (TPO-RAs, such as Promacta [eltrombopag], Doptelet [avatrombopag], Nplate [romiplostim])

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Alvaiz.

INITIAL CRITERIA (CONTINUED)

3. Does the patient have a diagnosis of thrombocytopenia due to chronic hepatitis C **AND** meet the following criterion?
   - The patient's thrombocytopenia prevents the initiation of interferon-based therapy or limits the ability to maintain interferon-based therapy

   If yes, **approve for 12 months by GPID or GPI-14 for all of the following strengths and formulations:**
   - **12.5mg tablet: #1 per day.**
   - **25mg tablet: #1 per day.**
   - **50mg tablet: #2 per day.**
   - **75mg tablet: #1 per day.**
   - **12.5mg packets: #1 per day.**
   - **25mg packets: #4 per day.**

   If no, continue to #4.

4. Does the patient have a diagnosis of severe aplastic anemia (ICD-10 D61.9)?

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

5. Is the patient 2 years of age or older **AND** meets the following criterion?
   - Promacta will be used in combination with standard immunosuppressive therapy as first-line treatment

   If yes, **approve for 12 months by GPID or GPI-14 for all of the following strengths and formulations:**
   - **12.5mg tablet: #3 per day.**
   - **25mg tablet: #1 per day.**
   - **50mg tablet: #2 per day.**
   - **75mg tablet: #2 per day.**
   - **12.5mg packets: #3 per day.**
   - **25mg packets: #6 per day.**

   If no, continue to #6.

ELTROMBOPAG - PROMACTA

INITIAL CRITERIA (CONTINUED)

6. Has the patient had an insufficient response to immunosuppressive therapy?

If yes, **approve for 12 months by GPID or GPI-14 for all of the following strengths and formulations:**

- **12.5mg tablet: #1 per day.**
- **25mg tablet: #1 per day.**
- **50mg tablet: #2 per day.**
- **75mg tablet: #2 per day.**
- **12.5mg packets: #1 per day.**
- **25mg packets: #6 per day.**

If no, do not approve.

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ELTROMBOPAG - PROMACTA** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Persistent or chronic immune (idiopathic) thrombocytopenia (a type of blood disorder)
   2. Thrombocytopenia (a type of blood disorder) due to chronic hepatitis C (a type of liver infection)
   3. Severe aplastic anemia (a type of blood disorder)

B. If you have persistent or chronic immune (idiopathic) thrombocytopenia, approval also requires:
   1. You are 1 year of age or older
   2. You have tried or have a contraindication to (harmful for you to use) ONE of the following clinical standard of care medications: a corticosteroid or intravenous (injection into the vein) immunoglobulin, OR you did not have a good enough response to a splenectomy (spleen removal)
   3. You will NOT use Promacta concurrently (at the same time) with other thrombopoietin receptor agonists (TPO-RAs, such as Doptelet [avatrombopag], Nplate [romiplostim], Alvaiz [eltrombopag])
   4. You meet ONE of the following:
      a. You have a platelet (a type of blood cell) count of less than 30 x 10^9/L
      b. You have a platelet (a type of blood cell) count of less than 50 x 10^9/L AND a prior bleeding event

(Initial denial text continued on next page)

ELTROMBOPAG - PROMACTA

INITIAL CRITERIA (CONTINUED)

C. If you have thrombocytopenia due to chronic hepatitis C, approval also requires:
1. Your thrombocytopenia does not allow you to start interferon-based therapy (a type of medication to treat liver infection) or limits your ability to maintain interferon-based therapy

D. If you have severe aplastic anemia, approval also requires:
1. You meet ONE of the following:
   a. You are 2 years of age or older AND Promacta will be used in combination (together) with standard immunosuppressive therapy (treatment that lowers the activity of the body's immune system) as first-line treatment (used for initial treatment)
   b. You did not have a good enough response to immunosuppressive therapy (treatment that lowers the activity of the body's immune system)

ELTROMBOPAG - PROMACTA

RENEWAL CRITERIA

NOTE: For the diagnoses of thrombocytopenia due to chronic hepatitis C or severe aplastic anemia, please refer to the Initial Criteria section.

1. Does the patient have a diagnosis of persistent or chronic immune (idiopathic) thrombocytopenia (ITP) (ICD-10 D69.3) and meet **ALL** of the following criteria?
   - The patient has shown a clinical response to therapy, defined as having an improvement in platelet count from baseline OR a reduction in bleeding events
   - Promacta will NOT be used concurrently with other thrombopoietin receptor agonists (TPO-RAs) (e.g., Doptelet [avatrombopag], Nplate [romiplostim], Alvaiz [eltrombopag])

   If yes, **approve for 12 months by GPID or GPI-14 for all of the following strengths and formulations:**
   - **12.5mg tablet: #1 per day.**
   - **25mg tablet: #1 per day.**
   - **50mg tablet: #1 per day.**
   - **75mg tablet: #1 per day.**
   - **12.5mg packets: #1 per day.**
   - **25mg packets: #3 per day.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ELTROMBOPAG - PROMACTA** requires the following rules be met for renewal:
   A. You have persistent or chronic immune (idiopathic) thrombocytopenia (ITP: a type of blood disorder)
   B. You have shown a clinical response to therapy, defined as having an improvement in platelet (a type of blood cell) count from baseline (before starting Promacta) OR a decrease in bleeding events
   C. You will NOT use Promacta concurrently (at the same time) with other thrombopoietin receptor agonists (TPO-RAs, such as Doptelet [avatrombopag], Nplate [romiplostim], Alvaiz [eltrombopag])

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

EMAPALUMAB-LZSG

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EMAPALUMAB-LZSG	GAMIFANT	45503		GPI-10 (9940503540)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of primary (familial) hemophagocytic lymphohistiocytosis (HLH) (ICD-10 D76.1) and meet **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with an immunologist, hematologist, or oncologist
   - Gamifant will be used concurrently with dexamethasone
   - The patient has refractory, recurrent, or progressive disease OR the patient had a trial of or intolerance to conventional HLH therapy (chemotherapy, steroids, immunotherapy)

   If yes, continue to #2.
   If no, continue to #3.

2. Is the patient's primary HLH diagnosis confirmed by **ONE** of the following criteria?
   - The patient has undergone a genetic test identifying HLH-associated gene mutation (e.g., PRF1, UNC13D)
   - The patient has at least five of the following eight diagnostic criteria for HLH: fever; splenomegaly; cytopenias (affecting at least 2 of 3 cell lineages); hypertriglyceridemia and/or hypofibrinogenemia; hemophagocytosis in bone marrow or spleen or lymph nodes, and no evidence of malignancy; low or absent natural killer-cell activity; ferritin level of at least 500 mcg/L; soluble CD25 level of at least 2,400 U/mL

   If yes, **approve for 8 weeks by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient have a diagnosis of hemophagocytic lymphohistiocytosis (HLH)/macrophage activation syndrome (MAS) (ICD-10 D76.1) and meet **ALL** of the following criteria?
   - The patient has known or suspected Still's disease or systemic juvenile idiopathic arthritis (sJIA)
   - The patient had an inadequate response or intolerance to glucocorticoids OR has a recurrent MAS

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EMAPALUMAB-LZSG

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EMAPALUMAB-LZSG (Gamifant)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Primary (familial) hemophagocytic lymphohistiocytosis (HLH: a type of genetic immune disorder)
   2. Hemophagocytic lymphohistiocytosis (HLH)/macrophage activation syndrome (MAS) (a type of immune disorder)

B. If you have primary hemophagocytic lymphohistiocytosis, approval also requires:
   1. Therapy is prescribed by or in consultation with an immunologist (doctor who specializes in immune disorders), hematologist (a type of blood doctor), or oncologist (a type of cancer doctor)
   2. Gamifant will be used at the same time with dexamethasone
   3. You have refractory, recurrent, or progressive disease (disease does not respond to treatment, returns, or is getting worse) OR you have tried or had an intolerance (side effect) to conventional hemophagocytic lymphohistiocytosis therapy (chemotherapy, steroids, immunotherapy)
   4. Your diagnosis is confirmed by ONE of the following:
      a. You have undergone a genetic test identifying HLH-associated gene mutation (such as PRF1 [type of gene], UNC13D [type of gene])
      b. You have at least five of the following eight diagnostic criteria for HLH: fever; splenomegaly (enlarged spleen); cytopenias (low number of a type of blood cell affecting at least 2 of 3 cell lineages); hypertriglyceridemia (high level of triglycerides, a type of fat in blood) and/or hypofibrinogenemia (low level of fibrinogen, a type of protein in the blood); hemophagocytosis (destruction of certain types of cells) in bone marrow or spleen or lymph nodes, and no evidence of malignancy (cancer); low or absent natural killer-cell (white blood cells) activity; ferritin level (a type of lab test) of at least 500 mcg/L; soluble CD25 level (a type of lab test) of at least 2,400 U/mL

C. If you have hemophagocytic lymphohistiocytosis/macrophage activation syndrome, approval also requires:
   1. You have known or suspected Still's disease (an autoinflammatory disease) or systemic juvenile idiopathic arthritis (sJIA: a type of joint condition)
   2. You had an inadequate response (treatment did not work) or intolerance (side effect) to glucocorticoids OR you have a recurrent (disease has returned) macrophage activation syndrome (MAS: a type of immune disorder)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EMAPALUMAB-LZSG

RENEWAL CRITERIA

NOTE: For the diagnosis of hemophagocytic lymphohistiocytosis (HLH)/macrophage activation syndrome (MAS), please refer to the Initial Criteria section.

1. Does the patient have a diagnosis of primary (familial) hemophagocytic lymphohistiocytosis (HLH) (ICD-10 D76.1) and meet **ALL** of the following criteria?
   - The patient has not received a successful hematopoietic stem cell transplantation
   - The patient has demonstrated improved immune system response from baseline as manifested by any of the following: resolution of fever, decreased splenomegaly, improvement in CNS symptoms (e.g., altered mental status), improved CBC, increased fibrinogen levels, reduced D- dimer, reduced ferritin, reduced soluble CD25 levels

   If yes, **approve for 8 weeks by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EMAPALUMAB-LZSG (Gamifant)** requires the following rule(s) be met for renewal:
   A. You have primary (familial) hemophagocytic lymphohistiocytosis (HLH: a type of genetic immune disorder)
   B. You have not received a successful hematopoietic stem cell transplantation (bone marrow transplant)
   C. You have demonstrated improved immune system response from baseline as shown by any of the following: your fever has gone away, decreased splenomegaly (spleen size has gotten smaller), improvement in central nervous system symptoms (such as altered mental status), improved complete blood count, increased fibrinogen levels, or reduced D-dimer, ferritin, or soluble CD25 (types of proteins) levels

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

PRIOR AUTHORIZATION GUIDELINES

EMICIZUMAB-KXWH

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EMICIZUMAB-KXWH	HEMLIBRA	44640		GPI-10 (8510503020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of hemophilia A (congenital factor VIII deficiency) (ICD-10 Z14.0) and meet **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a hematologist
   - Hemlibra will be used for routine prophylaxis to prevent or reduce the frequency of bleeding episodes
   - Hemlibra will NOT be used concurrently with another non-factor prophylaxis therapy (e.g., Hympavzi [marstacimab-hncq])

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Is the request for a patient WITH factor VIII inhibitors **AND** the patient meets the following criterion?
   - The patient has a history of a high titer of factor VIII inhibitor, defined as at least 5 Bethesda units per milliliter

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Is the request for a patient WITHOUT factor VIII inhibitors?

   If yes, continue to #4.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

4. Does the patient have moderate to severe hemophilia A, defined as less than 5 percent factor VIII activity compared to normal?

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #5.

EMICIZUMAB-KXWH

INITIAL CRITERIA (CONTINUED)

5. Does the patient have mild hemophilia A, defined as 5 percent - 40 percent factor VIII activity compared to normal, and meet **ONE** of the following criteria?
   - The patient has experienced severe, traumatic, or spontaneous bleeding episode(s) (may occur in joint or muscle)
   - The patient has experienced a life-threatening bleed (e.g., intracranial hemorrhage [ICH])
   - The patient has venous access difficulties impeding regular clotting factor infusions

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EMICIZUMAB-KXWH (Hemlibra)** requires the following rule(s) be met for approval:
   A. You have hemophilia A (congenital factor VIII deficiency: a type of bleeding disorder)
   B. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
   C. Hemlibra will be used for routine prophylaxis to prevent or reduce the frequency of bleeding episodes
   D. You will NOT use Hemlibra concurrently (at the same time) with another non-factor prophylaxis therapy (such as Hympavzi [marstacimab-hncq])
   E. If you have hemophilia A with factor VIII inhibitors (a type of protein), approval also requires:
      1. You have a history of a high titer (concentration) of factor VIII inhibitor, defined as at least 5 Bethesda units per milliliter
   F. If you have hemophilia A without factor VIII inhibitors (a type of protein), approval also requires ONE of the following:
      1. You have moderate to severe hemophilia A, defined as less than 5 percent factor VIII activity compared to normal
      2. You have mild hemophilia A, defined as 5 percent - 40 percent factor VIII activity compared to normal, and meet ONE of the following:
         a. You have experienced severe, traumatic, or spontaneous (sudden) bleeding episode(s) (may occur in joint or muscle)
         b. You have experienced a life-threatening bleed (such as intracranial hemorrhage [ICH: a type of bleeding in the head])
         c. It is difficult to access your veins which prevents or delays you in receiving regular clotting factor infusions

ENCORAFENIB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ENCORAFENIB (Braftovi)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Unresectable or metastatic melanoma (a type of skin cancer that cannot be completely removed with surgery or has spread to other parts of the body)
   2. Metastatic colorectal cancer (mCRC: a type of digestive cancer that has spread to other parts of the body)
   3. Metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread to other parts of the body)

B. If you have unresectable or metastatic melanoma, approval also requires:
   1. You have a BRAF V600E or V600K mutation (abnormal change in types of genes), as detected by a Food and Drug Administration (FDA)-approved test
   2. Braftovi will be used in combination with Mektovi (binimetinib)

C. If you have metastatic colorectal cancer, approval also requires:
   1. You are 18 years of age or older
   2. You have a BRAF V600E mutation (abnormal change in a type of gene), as detected by a Food and Drug Administration (FDA)-approved test
   3. You meet ONE of the following:
      a. Braftovi will be used in combination with Erbitux (cetuximab) and fluorouracil-based chemotherapy (such as mFOLFOX6 [fluorouracil, leucovorin and oxaliplatin], FOLFIRI [fluorouracil, leucovorin, and irinotecan])
      b. Braftovi will be used in combination with Erbitux (cetuximab), and you have previously received treatment (such as irinotecan)

D. If you have metastatic non-small cell lung cancer, approval also requires:
   1. You are 18 years of age or older
   2. You have a BRAF V600E mutation (abnormal change in a type of gene), as detected by a Food and Drug Administration (FDA)-approved test
   3. Braftovi will be used in combination with Mektovi (binimetinib)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Braftovi.

ENFORTUMAB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ENFORTUMAB VEDOTIN-EJFV	PADCEV	46257		GPI-10 (2135702620)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of locally advanced or metastatic urothelial cancer (mUC) (ICD-10 Groups C65, C66, C67, C68) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #2.
   If no, continue to #4.

2. Will Padcev be used as a single agent and the patient meets **ONE** of the following criteria?
   - The patient has previously received a programmed death receptor-1 (PD-1) or programmed death-ligand 1 (PD-L1) inhibitor and platinum (e.g., cisplatin, carboplatin)-containing chemotherapy
   - The patient is ineligible for cisplatin-containing chemotherapy AND has previously received one or more prior lines of therapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Will Padcev be used in combination with Keytruda (pembrolizumab) or Keytruda Qlex (pembrolizumab and berahyaluronidase alfa-pmph)?

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

4. Does the patient have a diagnosis of bladder cancer (ICD-10 Group C67) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has muscle invasive bladder cancer (MIBC)
   - Padcev will be used in combination with Keytruda (pembrolizumab) or Keytruda Qlex (pembrolizumab and berahyaluronidase alfa-pmph) as neoadjuvant treatment and then continued after cystectomy as adjuvant treatment

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

ENFORTUMAB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ENFORTUMAB (Padcev)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Locally advanced or metastatic urothelial cancer (mUC: type of urinary system cancer that has spread to nearby tissue or lymph nodes or to other parts of the body)
   2. Bladder cancer

B. If you have locally advanced or metastatic urothelial cancer, approval also requires:
   1. You are 18 years of age or older
   2. You meet ONE of the following:
      a. Padcev will be used as a single agent, and you meet ONE of the following:
         i. You have previously received a medication that works against a type of protein called programmed death receptor-1 (PD-1) or programmed death-ligand 1 (PD-L1), AND you have previously received a platinum (such as cisplatin, carboplatin)-containing chemotherapy (type of cancer medication)
         ii. You are not eligible for cisplatin-containing chemotherapy and have previously received one or more prior lines of therapy
      b. Padcev will be used in combination with Keytruda (pembrolizumab) or Keytruda Qlex (pembrolizumab and berahyaluronidase alfa-pmph)

C. If you have bladder cancer, approval also requires
   1. You are 18 years of age or older
   2. You have muscle invasive bladder cancer (MIBC: bladder cancer that has grown into the muscle wall)
   3. Padcev will be used in combination with Keytruda (pembrolizumab) or Keytruda Qlex (pembrolizumab and berahyaluronidase alfa-pmph), as neoadjuvant treatment (given before main treatment), and then continued after cystectomy (bladder removal surgery) as adjuvant treatment (additional treatment)

RATIONALE

ENSARTINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ENSARTINIB HYDROCHLORIDE	ENSACOVE	50112		GPI-10 (2153301520)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of locally advanced or metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's tumors are anaplastic lymphoma kinase (ALK)-positive
   - The patient has NOT previously received an ALK-inhibitor (e.g., Xalkori [crizotinib], Alecensa [alectinib])

   If yes, **approve all strengths for 12 months by GPID or GPI-14 as follows:**
   - **25mg: #9 per day.**
   - **100mg: #2 per day.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ENSARTINIB (Ensacove)** requires the following rule(s) be met for approval:
   A. You have locally advanced or metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread from where it started to nearby tissue/lymph nodes or other parts of the body)
   B. You are 18 years of age or older
   C. Your tumors are anaplastic lymphoma kinase (ALK: a type of enzyme)-positive
   D. You have NOT previously received an ALK-inhibitor (such as Xalkori [crizotinib], Alecensa [alectinib])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ENSIFENTRINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ENSIFENTRINE	OHTUVAYRE	49726		GPI-10 (4443002000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of chronic obstructive pulmonary disease (COPD) (ICD-10 Group J44 except for ICD-10 J44.0 and ICD-10 J44.81) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Ohtuvayre will be used as maintenance treatment
   - Therapy is prescribed by or in consultation with a pulmonologist

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient have a blood eosinophil level of 100 cells/microliter or greater?

   If yes, continue to #3.
   If no, continue to #4.

3. Has the patient had a history of and will continue on, or has a contraindication or failure to, the following standard of care therapy?
   - LAMA (long-acting antimuscarinic)/LABA (long-acting beta-2-agonist)/ICS (inhaled corticosteroid) combination drug (e.g., Trelegy Ellipta, Breztri Aerosphere)

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #5mL per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

4. Has the patient had a history of and will continue on, or has a contraindication or failure to, the following standard of care therapy?
   - LAMA (long-acting antimuscarinic)/LABA (long-acting beta-2-agonist) combination drug (e.g., Stiolto Respimat, Anoro Ellipta)

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #5mL per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ENSIFENTRINE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ENSIFENTRINE (Ohtuvayre)** requires the following rule(s) be met for approval:

A. You have chronic obstructive pulmonary disease (COPD: a type of long-term lung condition)
B. You are 18 years of age or older
C. Ohtuvayre will be used as maintenance treatment (taken on a regular basis)
D. Therapy is prescribed by or in consultation with a pulmonologist (a type of lung/breathing doctor)
E. You have a history of and will continue on, or you had a contraindication (harmful for you to use) or failure (drug did not work) to ONE of the following standard of care therapies:
    1. LAMA (long-acting antimuscarinic)/LABA (long-acting beta-2-agonist) combination drug (such as Stiolto Respimat, Anoro Ellipta)
    2. LAMA/LABA/ICS (inhaled corticosteroid) combination drug (such as Trelegy Ellipta, Breztri Aerosphere) if you have a blood eosinophil level of 100 cells/microliter or greater

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ENSIFENTRINE

RENEWAL CRITERIA

1. Does the patient have a diagnosis of chronic obstructive pulmonary disease (COPD) (ICD-10 Group J44 except for ICD-10 J44.0 and ICD-10 J44.81)?

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Does the patient have a blood eosinophil level of 100 cells/microliter or greater?

   If yes, continue to #3.
   If no, continue to #4.

3. Has the patient had a history of and will continue on, or has a contraindication or failure to, the following standard of care therapy?
   - LAMA (long-acting antimuscarinic)/LABA (long-acting beta-2-agonist)/ICS (inhaled corticosteroid) combination drug (e.g., Trelegy Ellipta, Breztri Aerosphere)

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

4. Has the patient had a history of and will continue on, or has a contraindication or failure to, the following standard of care therapy?
   - LAMA (long-acting antimuscarinic)/LABA (long-acting beta-2-agonist) combination drug (e.g., Stiolto Respimat, Anoro Ellipta)

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

5. Has the patient shown a clinical response as evidenced by **ONE** of the following criteria?
   - The patient has a reduction in COPD exacerbations from baseline
   - The patient has a reduction in severity or frequency of COPD-related symptoms (e.g., wheezing, shortness of breath, coughing, sputum production, etc.)
   - The patient has an increase in FEV1 by at least 5 percent from pretreatment baseline

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #5mL per day.**
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

ENSIFENTRINE

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ENSIFENTRINE (Ohtuvayre)** requires the following rule(s) be met for renewal:

A. You have chronic obstructive pulmonary disease (COPD: a type of long-term lung condition)
B. You have a history of and will continue on, or you had a contraindication (harmful for you to use) or failure (drug did not work) to ONE of the following standard of care therapies:
    1. LAMA (long-acting antimuscarinic)/LABA (long-acting beta-2-agonist) combination drug (such as Stiolto Respimat, Anoro Ellipta)
    2. LAMA/LABA/ICS (inhaled corticosteroid) combination drug (such as Trelegy Ellipta, Breztri Aerosphere) if you have a blood eosinophil level of 100 cells/microliter or greater
C. You have shown a clinical response as evidenced by ONE of the following:
    1. You have a reduction (decrease) in COPD exacerbations (worsening of symptoms) from baseline (before starting Ohtuvayre)
    2. You have a reduction in severity or frequency of COPD-related symptoms (such as wheezing, shortness of breath, coughing, sputum (mucus) production, etc.)
    3. You have an increase in FEV1 (a type of lung test) by at least 5 percent from pretreatment baseline (before starting Ohtuvayre)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ENTRECTINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ENTRECTINIB	ROZLYTREK	45952		GPI-10 (2153382000)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's tumor is *ROS1*-positive as detected by an FDA-approved test

   If yes, continue to #3.
   If no, continue to #2.

2. Does the patient have a diagnosis of a solid tumor and meet **ALL** of the following criteria?
   - The patient is 1 month of age or older
   - The tumor has a neurotrophic tyrosine receptor kinase (NTRK) gene fusion without a known acquired resistance mutation, as detected by an FDA-approved test
   - The tumor is metastatic or surgical resection is likely to result in severe morbidity
   - The patient has progressed following treatment or there are no satisfactory alternative treatments

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Is the request for Rozlytrek (100 mg or 200 mg) capsules?

   If yes, **approve both 100 mg and 200 mg capsules for 12 months by GPID or GPI-14 with the following quantity limits:**
   - **100 mg: #5 per day.**
   - **200 mg: #3 per day.**

   If no, continue to #4.

ENTRECTINIB

GUIDELINES FOR USE (CONTINUED)

4. Is the request for Rozlytrek 50 mg pellets and the patient meets **ALL** of the following criteria?
   - The patient had a trial of or contraindication to Rozlytrek capsules made into an oral suspension
   - The patient has difficulty or is unable to swallow capsules

   If yes, **approve for 12 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **50 mg: #12 per day.**
   - **100 mg: #5 per day.**
   - **200 mg: #3 per day.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ENTRECTINIB (Rozlytrek)** requires the following rule(s) be met for approval:

   A. You have ONE of the following:
      1. Metastatic non-small cell lung cancer (NSCLC: a type of lung cancer that has spread to other parts of the body)
      2. Solid tumor (an abnormal mass)

   B. If you have metastatic non-small cell lung cancer, approval also requires:
      1. You are 18 years of age or older
      2. Your tumor is ROS1-positive (abnormal change in a type of gene) as detected by a Food and Drug Administration (FDA)-approved test

   C. If you have a solid tumor, approval also requires:
      1. You are 1 month of age or older
      2. The tumor has a neurotrophic tyrosine receptor kinase (NTRK) gene fusion without a known acquired resistance mutation (an abnormal change in a type of gene that does not have any known resistance), as detected by a Food and Drug Administration (FDA)-approved test
      3. Your tumor is metastatic (has spread to other parts of the body), or surgical resection (removal) is likely to result in severe morbidity (disease)
      4. You have progressed (gotten worse) after treatment or there are no satisfactory alternative treatments

ENZALUTAMIDE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ENZALUTAMIDE	XTANDI	39580		GPI-10 (2140243000)	

GUIDELINES FOR USE

1. Does the patient have **ONE** of the following diagnoses?
   - Castration-resistant prostate cancer (CRPC) (ICD-10 Z19.2, C61)
   - Metastatic castration-sensitive prostate cancer (mCSPC) (ICD-10 Z19.1, C61)

   If yes, continue to #3.
   If no, continue to #2.

2. Does the patient have a diagnosis of non-metastatic castration-sensitive prostate cancer (nmCSPC) (ICD-10 Z19.1, C61) **AND** meet the following criterion?
   - The patient is at high risk for metastasis (i.e., prostate specific antigen [PSA] doubling time over 9 months or less)

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Does the patient meet **ONE** of the following criteria?
   - The patient has received a bilateral orchiectomy
   - The patient has a castrate level of testosterone (i.e., less than 50 ng/dL)
   - Xtandi will be used concurrently with a gonadotropin releasing hormone (GnRH) analog (e.g., Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

   If yes, **approve all strengths for 12 months by GPID or GPI-14 with the following quantity limits:**
   - **40 mg: #4 per day.**
   - **80 mg: #2 per day.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

ENZALUTAMIDE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ENZALUTAMIDE (Xtandi)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Castration-resistant prostate cancer (CRPC: prostate cancer that does not respond to hormone therapy)
   2. Metastatic castration-sensitive prostate cancer (mCSPC: prostate cancer that has spread to other parts of the body and responds to hormone therapy)
   3. Non-metastatic castration-sensitive prostate cancer (nmCSPC: prostate cancer that has not spread to other parts of the body and responds to hormone therapy)

B. If you have castration-resistant prostate cancer or metastatic castration-sensitive prostate cancer, approval also requires ONE of the following:
   1. You have received a bilateral orchiectomy (surgical removal of both testicles)
   2. You have a castrate level of testosterone (blood testosterone levels are less than 50 ng/dL)
   3. Xtandi will be used concurrently (at the same time) with a gonadotropin releasing hormone analog (such as Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

C. If you have non-metastatic castration-sensitive prostate cancer, approval also requires:
   1. You are at high risk for metastasis (prostate specific antigen [PSA] level has doubled over 9 months or less)
   2. You meet ONE of the following:
      a. You have received a bilateral orchiectomy (surgical removal of both testicles)
      b. You have a castrate level of testosterone (blood testosterone levels are less than 50 ng/dL)
      c. Xtandi will be used concurrently (at the same time) with a gonadotropin releasing hormone analog (such as Lupron Depot [leuprolide], Zoladex [goserelin], Firmagon [degarelix])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

EPCORITAMAB-BYSP

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EPCORITAMAB-BYSP	EPKINLY	48945		GPI-10 (2135203120)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of relapsed or refractory diffuse large B-cell lymphoma (DLBCL) (ICD-10 Group C83.3) (including DLBCL arising from indolent lymphoma) or high-grade B-cell lymphoma, and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient previously received at least two lines of systemic therapy (e.g., R-CHOP [rituximab, cyclophosphamide, doxorubicin, vincristine and prednisone], GemOx [gemcitabine, oxaliplatin])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of relapsed or refractory follicular lymphoma (FL) (ICD-10 Group C82) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Does the patient meet **ONE** of the following criteria?
   - Epkinly will be used in combination with lenalidomide (Revlimid) and rituximab
   - Epkinly will be used as monotherapy after receiving at least two lines of systemic therapy (e.g., Gazyva [obinutuzumab], bendamustine, rituximab, Revlimid [lenalidomide])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EPCORITAMAB-BYSP (Epkinly)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Relapsed or refractory diffuse large B-cell lymphoma (DLBCL: a type of blood cancer that has returned or is not responding to treatment), including DLBCL arising from indolent (slow growing) lymphoma (a type of blood cancer), OR high-grade B-cell lymphoma (a type of blood cancer)
      2. Relapsed or refractory follicular lymphoma (FL: a type of blood cancer that has returned or is not responding to treatment)

   (Denial text continued on next page)

EPCORITAMAB-BYSP

GUIDELINES FOR USE (CONTINUED)

B. If you have diffuse large B-cell lymphoma or high-grade B-cell lymphoma, approval also requires:
1. You are 18 years of age or older
2. You previously received at least two lines of systemic therapy (treatment that travels throughout the body) (such as R-CHOP [rituximab, cyclophosphamide, doxorubicin, vincristine and prednisone], GemOx [gemcitabine, oxaliplatin])

C. If you have follicular lymphoma, approval also requires:
1. You are 18 years of age or older
2. You meet ONE of the following:
   a. Epkinly will be used in combination with lenalidomide (Revlimid) and rituximab
   b. Epkinly will be used as monotherapy (one medication treatment) after receiving at least two lines of systemic therapy (treatment that travels throughout the body) (such as Gazyva [obinutuzumab], bendamustine, rituximab, Revlimid [lenalidomide])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE
For further information, please refer to the Prescribing Information and/or Drug Monograph for Epkinly.

EPLONTERSEN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EPLONTERSEN SODIUM	WAINUA	49355		GPI-10 (6270102510)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of hereditary transthyretin-mediated amyloidosis with polyneuropathy (hATTR-PN) (ICD-10 E85.1) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist, cardiologist, hATTR specialist, or medical geneticist
   - The patient is ambulatory (i.e., Familial Amyloid Polyneuropathy [FAP] stage 1 - 2 or Polyneuropathy Disability [PND] Stage I - IIIb polyneuropathy)
   - Wainua will NOT be used concurrently with other hATTR-PN agents (e.g. Tegsedi [inotersen], Amvuttra [vutrisiran], Onpattro [patisiran])

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Is the hATTR diagnosis confirmed by **ONE** of the following?
   - Biopsy of tissue/organ to confirm amyloid presence AND chemical typing to confirm the presence of TTR (transthyretin) protein
   - DNA genetic sequencing to confirm hATTR mutation

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #0.8mL per 30 days.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EPLONTERSEN

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EPLONTERSEN (Wainua)** requires the following rule(s) be met for approval:

A. You have hereditary transthyretin-mediated amyloidosis with polyneuropathy (hATTR-PN: a rare genetic disorder with widespread nerve pain/damage)
B. You are 18 years of age or older
C. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nerve doctor), cardiologist (a type of heart doctor), hATTR specialist, or medical geneticist (doctor who treats gene disorders)
D. You are ambulatory (able to walk) (you have Familial Amyloid Polyneuropathy [FAP: a tool used to evaluate disease severity] stage 1 to 2 or Polyneuropathy Disability [PND: a tool used to evaluate disease severity] Stage I to IIIb polyneuropathy)
E. You will NOT use Wainua concurrently (at the same time) with other hATTR-PN medications (such as Tegsedi [inotersen], Amvuttra [vutrisiran], Onpattro [patisiran])
F. Your diagnosis is confirmed by ONE of the following:
    1. Biopsy (removal of cells from the body for examination) of tissue/organ to confirm amyloid (a type of abnormal protein) presence AND chemical typing to confirm the presence of TTR (transthyretin) protein
    2. DNA genetic sequencing (a type of lab test) to confirm hATTR mutation (a type of abnormal gene)

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EPLONTERSEN

RENEWAL CRITERIA

1. Does the patient have a diagnosis of hereditary transthyretin-mediated amyloidosis with polyneuropathy (hATTR-PN) (ICD-10 E85.1) and meet **ALL** of the following criteria?
   - The patient has not progressed to Familial Amyloid Polyneuropathy (FAP) stage 3 or Polyneuropathy Disability (PND) Stage IV polyneuropathy as evidenced by functional decline (e.g., wheelchair-bound, bedridden)
   - Wainua will NOT be used concurrently with other hATTR-PN agents (e.g. Tegsedi [inotersen], Amvuttra [vutrisiran], Onpattro [patisiran])

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #0.8mL per 30 days.**

   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EPLONTERSEN (Wainua)** requires the following rule(s) be met for renewal:
   A. You have hereditary transthyretin-mediated amyloidosis with polyneuropathy (hATTR-PN: a rare genetic disorder with widespread nerve pain/damage)
   B. You have not progressed to Familial Amyloid Polyneuropathy (FAP: a tool used to evaluate disease severity) stage 3 or Polyneuropathy Disability (PND: a tool used to evaluate disease severity) stage IV polyneuropathy as shown by functional decline (such as being wheelchair-bound or bedridden)
   C. You will NOT use Wainua concurrently (at the same time) with other hATTR-PN medications (such as Tegsedi [inotersen], Amvuttra [vutrisiran], Onpattro [patisiran])

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EPOETIN ALFA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EPOETIN ALFA	EPOGEN, PROCRIT	04553		GPI-10 (8240102000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) and meet **ALL** of the following criteria?
   - The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
   - The patient's hemoglobin level is less than 10g/dL
   - The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**
   - **Procrit 20,000U/mL: #12mL per 28 days.**
   - **Procrit 40,000U/mL: #4mL per 28 days.**
   - **Procrit 20,000U/2mL: #12mL per 28 days.**
   - **Epogen 2,000U/mL: #12mL per 28 days.**

EPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

2. Does the patient have a diagnosis of anemia due to the effect of concomitantly administered cancer chemotherapy (ICD-10 D64.81) and meet **ALL** of the following criteria?
   - The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
   - The patient's hemoglobin level is less than 11g/dL OR the patient's hemoglobin level has decreased at least 2g/dL below baseline level
   - The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**

EPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

3. Does the patient have a diagnosis of anemia related to zidovudine (Retrovir) therapy and meet **ALL** of the following criteria?
- The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
- The patient's hemoglobin level is less than 10g/dL
- The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
- **Procrit 2,000U/mL: #12mL per 28 days.**
- **Procrit 3,000U/mL: #12mL per 28 days.**
- **Procrit 4,000U/mL: #12mL per 28 days.**
- **Procrit 10,000U/mL: #12mL per 28 days.**
- **Procrit 20,000U/mL: #12mL per 28 days.**
- **Procrit 40,000U/mL: #4mL per 28 days.**
- **Procrit 20,000U/2mL: #12mL per 28 days.**
- **Epogen 2,000U/mL: #12mL per 28 days.**
- **Epogen 3,000U/mL: #12mL per 28 days.**
- **Epogen 4,000U/mL: #12mL per 28 days.**
- **Epogen 10,000U/mL: #12mL per 28 days.**
- **Epogen 20,000U/mL: #12mL per 28 days.**
- **Epogen 20,000U/2mL: #12mL per 28 days.**

If no, continue to #4.

EPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa and meet **ALL** of the following criteria?
   - The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
   - The patient's hemoglobin level is less than 10g/dL
   - The patient had a trial of or contraindication to ribavirin dose reduction
   - The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 6 months by GPID or GPI-14 for the requested strength as follows:**
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**
   - **Procrit 20,000U/mL: #12mL per 28 days.**
   - **Procrit 40,000U/mL: #4mL per 28 days.**
   - **Procrit 20,000U/2mL: #12mL per 28 days.**
   - **Epogen 2,000U/mL: #12mL per 28 days.**
   - **Epogen 3,000U/mL: #12mL per 28 days.**
   - **Epogen 4,000U/mL: #12mL per 28 days.**
   - **Epogen 10,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/2mL: #12mL per 28 days.**

   If no, continue to #5.

EPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

5. Is the patient undergoing elective, noncardiac, nonvascular surgery and meets **ALL** of the following criteria?
   - The patient had a trial of the preferred agent: Retacrit (epoetin alfa-epbx)
   - The patient's hemoglobin level is less than 13g/dL
   - The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 1 month by GPID or GPI-14 for the requested strength as follows:**
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**
   - **Procrit 20,000U/mL: #12mL per 28 days.**
   - **Procrit 40,000U/mL: #4mL per 28 days.**
   - **Procrit 20,000U/2mL: #12mL per 28 days.**
   - **Epogen 2,000U/mL: #12mL per 28 days.**
   - **Epogen 3,000U/mL: #12mL per 28 days.**
   - **Epogen 4,000U/mL: #12mL per 28 days.**
   - **Epogen 10,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/2mL: #12mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EPOETIN ALFA (Procrit, Epogen)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
   2. Anemia (a type of blood condition) due to the effect of concomitantly administered (given at the same time) cancer chemotherapy (medications used to treat cancer)
   3. Anemia (a type of blood condition) related to zidovudine (Retrovir) therapy (a type of medication to treat human immunodeficiency virus [HIV: an immune system disease caused by a virus])
   4. Anemia (a type of blood condition) due to hepatitis C (a type of liver infection) combination treatment with ribavirin plus an interferon alfa or peginterferon alfa
   5. You are undergoing elective, noncardiac, nonvascular surgery (surgery not relating to the heart or blood vessels)

B. If you have anemia due to chronic kidney disease, approval also requires:
   1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
   2. Your hemoglobin level (a type of blood test) is less than 10g/dL
   3. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

C. If you have anemia due to the effect of concomitantly administered cancer chemotherapy, approval also requires:
   1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
   2. Your hemoglobin level (a type of blood test) is less than 11g/dL OR your hemoglobin level has decreased at least 2g/dL below your baseline level
   3. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

(Initial denial text continued on next page)

EPOETIN ALFA

INITIAL CRITERIA (CONTINUED)

D. If you have anemia related to zidovudine (Retrovir) therapy, approval also requires:
1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
2. Your hemoglobin level (a type of blood test) is less than 10g/dL
3. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

E. If you have anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa, approval also requires:
1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
2. Your hemoglobin level (a type of blood test) is less than 10g/dL
3. You have tried or have a contraindication to (harmful for you to use) a lower ribavirin dose
4. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

F. If you are undergoing elective, noncardiac, nonvascular surgery, approval also requires:
1. You have tried the preferred medication: Retacrit (epoetin alfa-epbx)
2. Your hemoglobin level (a type of blood test) is less than 13g/dL
3. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EPOETIN ALFA

RENEWAL CRITERIA

NOTE: Requests for patients undergoing elective, noncardiac, nonvascular surgery, please refer to the Initial Criteria section.

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) **AND** meet the following criterion?
   - The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, continue to #2.
   If no, continue to #4.

2. Is the patient an adult (18 years of age or older) and meets **ONE** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL if not on dialysis
   - The patient's hemoglobin level is less than 11g/dL if on dialysis
   - The patient's hemoglobin level has reached 10g/dL (if not on dialysis) and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions
   - The patient's hemoglobin level has reached 11g/dL (if on dialysis) and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**
   - **Procrit 20,000U/mL: #12mL per 28 days.**
   - **Procrit 40,000U/mL: #4mL per 28 days.**
   - **Procrit 20,000U/2mL: #12mL per 28 days.**
   - **Epogen 2,000U/mL: #12mL per 28 days.**
   - **Epogen 3,000U/mL: #12mL per 28 days.**
   - **Epogen 4,000U/mL: #12mL per 28 days.**
   - **Epogen 10,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/2mL: #12mL per 28 days.**

   If no, continue to #3.

EPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

3. Is the request for a pediatric patient (less than 18 years of age) and the patient meets **ONE** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL
   - The patient's hemoglobin level has approached or exceeds 12g/dL and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**
   - **Procrit 20,000U/mL: #12mL per 28 days.**
   - **Procrit 40,000U/mL: #4mL per 28 days.**
   - **Procrit 20,000U/2mL: #12mL per 28 days.**
   - **Epogen 2,000U/mL: #12mL per 28 days.**
   - **Epogen 3,000U/mL: #12mL per 28 days.**
   - **Epogen 4,000U/mL: #12mL per 28 days.**
   - **Epogen 10,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/2mL: #12mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

EPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of anemia due to the effect of concomitantly administered cancer chemotherapy (ICD-10 D64.81) and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is between 10g/dL and 12g/dL
   - The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**
   - **Procrit 20,000U/mL: #12mL per 28 days.**
   - **Procrit 40,000U/mL: #4mL per 28 days.**
   - **Procrit 20,000U/2mL: #12mL per 28 days.**
   - **Epogen 2,000U/mL: #12mL per 28 days.**
   - **Epogen 3,000U/mL: #12mL per 28 days.**
   - **Epogen 4,000U/mL: #12mL per 28 days.**
   - **Epogen 10,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/2mL: #12mL per 28 days.**

   If no, continue to #5.

EPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

5. Does the patient have a diagnosis of anemia related to zidovudine (Retrovir) therapy and meet **ALL** of the following criteria?
- The patient's hemoglobin level is between 10g/dL and 12g/dL
- The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
- **Procrit 2,000U/mL: #12mL per 28 days.**
- **Procrit 3,000U/mL: #12mL per 28 days.**
- **Procrit 4,000U/mL: #12mL per 28 days.**
- **Procrit 10,000U/mL: #12mL per 28 days.**
- **Procrit 20,000U/mL: #12mL per 28 days.**
- **Procrit 40,000U/mL: #4mL per 28 days.**
- **Procrit 20,000U/2mL: #12mL per 28 days.**
- **Epogen 2,000U/mL: #12mL per 28 days.**
- **Epogen 3,000U/mL: #12mL per 28 days.**
- **Epogen 4,000U/mL: #12mL per 28 days.**
- **Epogen 10,000U/mL: #12mL per 28 days.**
- **Epogen 20,000U/mL: #12mL per 28 days.**
- **Epogen 20,000U/2mL: #12mL per 28 days.**

If no, continue to #6.

EPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

6. Does the patient have a diagnosis of anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is between 10g/dL and 12g/dL
   - The requested medication will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 6 months by GPID or GPI-14 for the requested strength as follows**:
   - **Procrit 2,000U/mL: #12mL per 28 days.**
   - **Procrit 3,000U/mL: #12mL per 28 days.**
   - **Procrit 4,000U/mL: #12mL per 28 days.**
   - **Procrit 10,000U/mL: #12mL per 28 days.**
   - **Procrit 20,000U/mL: #12mL per 28 days.**
   - **Procrit 40,000U/mL: #4mL per 28 days.**
   - **Procrit 20,000U/2mL: #12mL per 28 days.**
   - **Epogen 2,000U/mL: #12mL per 28 days.**
   - **Epogen 3,000U/mL: #12mL per 28 days.**
   - **Epogen 4,000U/mL: #12mL per 28 days.**
   - **Epogen 10,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/mL: #12mL per 28 days.**
   - **Epogen 20,000U/2mL: #12mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

EPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EPOETIN ALFA (Procrit, Epogen)** requires the following rule(s) be met for renewal:

A. You have ONE of the following:
   1. Anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
   2. Anemia (a type of blood condition) due to the effect of concomitantly administered (given at the same time) cancer chemotherapy (medications used to treat cancer)
   3. Anemia (a type of blood condition) related to zidovudine (Retrovir) therapy (a type of medication to treat human immunodeficiency virus [HIV: an immune system disease caused by a virus])
   4. Anemia (a type of blood condition) due to hepatitis C (a type of liver infection) combination treatment with ribavirin plus an interferon alfa or peginterferon alfa

B. If you have anemia due to chronic kidney disease, renewal also requires:
   1. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])
   2. If you are an adult (you are 18 years of age or older), renewal also requires ONE of the following:
      a. Your hemoglobin level (a type of blood test) is less than 10g/dL if you are not on dialysis (process of removing excess water, toxins from the blood)
      b. Your hemoglobin level (a type of blood test) is less than 11g/dL if you are on dialysis (process of removing excess water, toxins from the blood)
      c. Your hemoglobin level (a type of blood test) has reached 10g/dL (if you are not on dialysis [process of removing excess water, toxins from the blood]) and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)
      d. Your hemoglobin level (a type of blood test) has reached 11g/dL (if you are on dialysis [process of removing excess water, toxins from the blood]) and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)
   3. If you are a pediatric patient (you are less than 18 years of age), renewal also requires ONE of the following:
      a. Your hemoglobin level (a type of blood test) is less than 10g/dL
      b. Your hemoglobin level (a type of blood test) has approached or exceeds 12g/dL and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)

(Renewal denial text continued on next page)

EPOETIN ALFA

RENEWAL CRITERIA (CONTINUED)

C. If you have anemia due to the effect of concomitantly administered cancer chemotherapy, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

D. If you have anemia related to zidovudine (Retrovir) therapy, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

E. If you have anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use the requested medication concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Retacrit [epoetin alfa-epbx], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta) OR hypoxia- inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL
   - Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, continue to #2.

EPOETIN ALFA-EPBX

INITIAL CRITERIA (CONTINUED)

2. Does the patient have a diagnosis of anemia due to the effect of concomitantly administered cancer chemotherapy (ICD-10 D64.81) and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is less than 11g/dL OR the patient's hemoglobin level has decreased at least 2g/dL below baseline level
   - Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, continue to #3.

3. Does the patient have a diagnosis of anemia related to zidovudine (Retrovir) therapy and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL
   - Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, continue to #4.

EPOETIN ALFA-EPBX

INITIAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL
   - The patient had a trial of or contraindication to ribavirin dose reduction
   - Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 6 months by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, continue to #5.

5. Is the patient undergoing elective, noncardiac, nonvascular surgery and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is less than 13g/dL
   - Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 1 month by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EPOETIN ALFA-EPBX

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EPOETIN ALFA-EPBX (Retacrit)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
   2. Anemia (a type of blood condition) due to the effect of concomitantly administered (given at the same time) cancer chemotherapy (medications used to treat cancer)
   3. Anemia (a type of blood condition) related to zidovudine (Retrovir) therapy (a type of medication to treat human immunodeficiency virus [HIV: an immune system disease caused by a virus])
   4. Anemia (a type of blood condition) due to hepatitis C (a type of liver infection) combination treatment with ribavirin plus an interferon alfa or peginterferon alfa
   5. You are undergoing elective, noncardiac, nonvascular surgery (surgery not relating to the heart or blood vessels)

B. If you have anemia due to chronic kidney disease, approval also requires:
   1. Your hemoglobin level (a type of blood test) is less than 10g/dL
   2. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

C. If you have anemia due to the effect of concomitantly administered cancer chemotherapy, approval also requires:
   1. Your hemoglobin level (a type of blood test) is less than 11g/dL OR your hemoglobin level has decreased at least 2g/dL below your baseline level
   2. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

(Initial denial text continued on next page)

EPOETIN ALFA-EPBX

INITIAL CRITERIA (CONTINUED)

D. If you have anemia related to zidovudine (Retrovir) therapy, approval also requires:
1. Your hemoglobin level (a type of blood test) is less than 10g/dL
2. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

E. If you have anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa, approval also requires:
1. Your hemoglobin level (a type of blood test) is less than 10g/dL
2. You have tried or have a contraindication to (harmful for you to use) a lower ribavirin dose
3. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

F. If you are undergoing elective, noncardiac, nonvascular surgery, approval also requires:
1. Your hemoglobin level (a type of blood test) is less than 13g/dL
2. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EPOETIN ALFA-EPBX

RENEWAL CRITERIA

NOTE: Requests for patients undergoing elective, noncardiac, nonvascular surgery, please refer to the Initial Criteria section.

1. Does the patient have a diagnosis of anemia due to chronic kidney disease (CKD) (ICD-10 D63.1) **AND** meet the following criterion?
   - Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, continue to #2.
   If no, continue to #4.

2. Is the patient an adult (18 years of age or older) and meets **ONE** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL if not on dialysis
   - The patient's hemoglobin level is less than 11g/dL if on dialysis
   - The patient's hemoglobin level has reached 10g/dL (if not on dialysis) and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions
   - The patient's hemoglobin level has reached 11g/dL (if on dialysis) and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, continue to #3.

EPOETIN ALFA-EPBX

RENEWAL CRITERIA (CONTINUED)

3. Is the request for a pediatric patient (less than 18 years of age) and the patient meets **ONE** of the following criteria?
   - The patient's hemoglobin level is less than 10g/dL
   - The patient's hemoglobin level has approached or exceeds 12g/dL and the dose is being or has been reduced/interrupted to decrease the need for blood transfusions

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

4. Does the patient have a diagnosis of anemia due to the effect of concomitantly administered cancer chemotherapy (ICD-10 D64.81) and meet **ALL** of the following criteria?
   - The patient's hemoglobin level is between 10g/dL and 12g/dL
   - Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
   - **2,000U/mL: #12mL per 28 days.**
   - **3,000U/mL: #12mL per 28 days.**
   - **4,000U/mL: #12mL per 28 days.**
   - **10,000U/mL: #12mL per 28 days.**
   - **20,000U/mL: #12mL per 28 days.**
   - **40,000U/mL: #4mL per 28 days.**
   - **20,000U/2mL: #12mL per 28 days.**

   If no, continue to #5.

EPOETIN ALFA-EPBX

RENEWAL CRITERIA (CONTINUED)

5. Does the patient have a diagnosis of anemia related to zidovudine (Retrovir) therapy and meet **ALL** of the following criteria?
- The patient's hemoglobin level is between 10g/dL and 12g/dL
- Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

If yes, **approve for 12 months by GPID or GPI-14 for the requested strength as follows:**
- **2,000U/mL: #12mL per 28 days.**
- **3,000U/mL: #12mL per 28 days.**
- **4,000U/mL: #12mL per 28 days.**
- **10,000U/mL: #12mL per 28 days.**
- **20,000U/mL: #12mL per 28 days.**
- **40,000U/mL: #4mL per 28 days.**
- **20,000U/2mL: #12mL per 28 days.**

If no, continue to #6.

6. Does the patient have a diagnosis of anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa and meet **ALL** of the following criteria?
- The patient's hemoglobin level is between 10g/dL and 12g/dL
- Retacrit will NOT be used concurrently with another erythropoiesis-stimulating agent (ESA) (e.g., Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF- PHI) (e.g., Jesduvroq [daprodustat], Vafseo [vadadustat])

If yes, **approve for 6 months by GPID or GPI-14 for the requested strength as follows:**
- **2,000U/mL: #12mL per 28 days.**
- **3,000U/mL: #12mL per 28 days.**
- **4,000U/mL: #12mL per 28 days.**
- **10,000U/mL: #12mL per 28 days.**
- **20,000U/mL: #12mL per 28 days.**
- **40,000U/mL: #4mL per 28 days.**
- **20,000U/2mL: #12mL per 28 days.**

If no, do not approve.

EPOETIN ALFA-EPBX

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EPOETIN ALFA-EPBX (Retacrit)** requires the following rule(s) be met for renewal:

A. You have ONE of the following:
   1. Anemia (a type of blood condition) due to chronic (long-term) kidney disease (CKD)
   2. Anemia (a type of blood condition) due to the effect of concomitantly administered (given at the same time) cancer chemotherapy (medications used to treat cancer)
   3. Anemia (a type of blood condition) related to zidovudine (Retrovir) therapy (a type of medication to treat human immunodeficiency virus [HIV: an immune system disease caused by a virus])
   4. Anemia (a type of blood condition) due to hepatitis C (a type of liver infection) combination treatment with ribavirin plus an interferon alfa or peginterferon alfa

B. If you have anemia due to chronic kidney disease, renewal also requires:
   1. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])
   2. If you are an adult (you are 18 years of age or older), renewal also requires ONE of the following:
      a. Your hemoglobin level (a type of blood test) is less than 10g/dL if you are not on dialysis (process of removing excess water, toxins from the blood)
      b. Your hemoglobin level (a type of blood test) is less than 11g/dL if you are on dialysis (process of removing excess water, toxins from the blood)
      c. Your hemoglobin level (a type of blood test) has reached 10g/dL (if you are not on dialysis [process of removing excess water, toxins from the blood]) and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)
      d. Your hemoglobin level (a type of blood test) has reached 11g/dL (if you are on dialysis [process of removing excess water, toxins from the blood]) and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)
   3. If you are a pediatric patient (you are less than 18 years of age), renewal also requires ONE of the following:
      a. Your hemoglobin level (a type of blood test) is less than 10g/dL
      b. Your hemoglobin level (a type of blood test) has approached or exceeds 12g/dL and your dose is being or has been reduced or interrupted to decrease the need for blood transfusions (adding blood to your body)

(Renewal denial text continued on next page)

EPOETIN ALFA-EPBX

RENEWAL CRITERIA (CONTINUED)

C. If you have anemia due to the effect of concomitantly administered cancer chemotherapy, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

D. If you have anemia related to zidovudine (Retrovir) therapy, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

E. If you have anemia due to concurrent hepatitis C combination treatment with ribavirin plus an interferon alfa or peginterferon alfa, renewal also requires:
1. Your hemoglobin level (a type of blood test) is between 10g/dL and 12g/dL
2. You will NOT use Retacrit concurrently (at the same time) with another erythropoiesis-stimulating agent (ESA) (such as Epogen [epoetin alfa], Procrit [epoetin alfa], Aranesp [darbepoetin alfa], Mircera [methoxy polyethylene glycol-epoetin beta]) OR hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF-PHI) (such as Jesduvroq [daprodustat], Vafseo [vadadustat])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE
For further information, please refer to the Prescribing Information and/or Drug Monograph for Retacrit.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of pulmonary arterial hypertension (PAH) (WHO Group 1) (ICD-10 I27.0, Group I27.2) **AND** meet the following criterion?
   - Therapy is prescribed by or in consultation with a cardiologist or pulmonologist

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Is the patient's PAH diagnosis confirmed by right heart catheterization with **ALL** of the following parameters?
   - Mean pulmonary artery pressure (PAP) of greater than 20 mmHg
   - Pulmonary capillary wedge pressure (PCWP) of less than or equal to 15 mmHg
   - Pulmonary vascular resistance (PVR) of greater than 2 Wood units (WU)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EPOPROSTENOL IV (NSA)

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EPOPROSTENOL IV (Flolan, Veletri)** requires the following rule(s) be met for approval:

A. You have pulmonary arterial hypertension (PAH: a type of heart and lung condition) (World Health Organization [WHO] Group 1)
B. Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor) or pulmonologist (lung/breathing doctor)
C. Your pulmonary arterial hypertension is confirmed by ALL of the following lab values by putting a catheter (narrow flexible tube) into the right side of your heart:
    1. Mean pulmonary artery pressure (PAP) greater than 20 mmHg
    2. Pulmonary capillary wedge pressure (PCWP) less than or equal to 15 mmHg
    3. Pulmonary vascular resistance (PVR) greater than 2 Wood units

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EPTINEZUMAB-JJMR

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EPTINEZUMAB-JJMR (Vyepti)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Episodic migraines (a type of headache)
   2. Chronic migraines (a type of headache)

B. If you have episodic migraines (0-14 headache days per month), approval also requires:
   1. You are 18 years of age or older
   2. Vyepti is prescribed for the preventive treatment of migraines (a type of headache)
   3. You will NOT use Vyepti concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine (a type of headache) prevention
   4. You have tried TWO of the following preferred medications: Aimovig (erenumab-aooe), Emgality (galcanezumab-gnlm), Nurtec ODT (rimegepant), Qulipta (atogepant), Ajovy (fremanezumab-vfrm)

C. If you have chronic migraines (at least 15 headache days per month), approval also requires:
   1. You are 18 years of age or older
   2. Vyepti is prescribed for the preventive treatment of migraines (a type of headache)
   3. You will NOT use Vyepti concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine (a type of headache) prevention
   4. You have tried TWO of the following preferred medications: Aimovig (erenumab-aooe), Emgality (galcanezumab-gnlm), Nurtec ODT (rimegepant), Qulipta (atogepant), Ajovy (fremanezumab-vfrm)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EPTINEZUMAB-JJMR

RENEWAL CRITERIA

1. Is the request for the preventive treatment of migraines **AND** the patient meets the following criterion?
   - Vyepti will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine prevention

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has experienced a reduction in migraine or headache frequency of at least 2 days per month with Vyepti therapy
   - The patient has experienced a reduction in migraine severity with Vyepti therapy
   - The patient has experienced a reduction in migraine duration with Vyepti therapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EPTINEZUMAB-JJMR (Vyepti)** requires the following rule(s) be met for renewal:
   A. The request is for the preventive treatment of migraines (a type of headache)
   B. You will NOT use Vyepti concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine (a type of headache) prevention
   C. You meet ONE of the following:
      1. You have experienced a decrease in migraine (a type of headache) or headache frequency of at least 2 days per month with Vyepti therapy
      2. You have experienced a decrease in migraine (a type of headache) severity with Vyepti therapy
      3. You have experienced a decrease in migraine (a type of headache) duration with Vyepti therapy

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

PRIOR AUTHORIZATION GUIDELINES

ERDAFITINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ERDAFITINIB	BALVERSA	45687		GPI-10 (2153222500)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of locally advanced or metastatic urothelial carcinoma (i.e., bladder cancer) (ICD-10 Groups C65, C66, C67, C68) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has a susceptible FGFR3 genetic alteration as detected by an FDA-approved companion diagnostic test
   - The patient has disease progression on or after at least one line of prior systemic therapy (e.g., cisplatin, Keytruda [pembrolizumab])

   If yes, **approve for 12 months by GPID or GPI-14 for all strengths with the following quantity limits:**
   - **3mg: #3 per day.**
   - **4mg: #2 per day.**
   - **5mg: #1 per day.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ERDAFITINIB (Balversa)** requires the following rule(s) be met for approval:
   A. You have locally advanced or metastatic urothelial carcinoma (a type of bladder cancer that has spread to nearby tissue or other parts of the body)
   B. You are 18 years of age or older
   C. You have a susceptible (can be treated with the drug) fibroblast growth factor receptor 3 (FGFR3: a type of protein) genetic alteration (mutation) as detected by a Food and Drug Administration (FDA)-approved companion diagnostic test
   D. You have disease progression (condition has worsened) on or after at least one line of prior systemic therapy (treatment that targets the entire body, such as cisplatin, Keytruda [pembrolizumab])

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

1. Does the patient have a diagnosis of episodic migraines and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Aimovig is prescribed for the preventive treatment of migraines
   - Aimovig will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine prevention

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of chronic migraines (ICD-10 Groups G43.7, G43.E) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Aimovig is prescribed for the preventive treatment of migraines
   - Aimovig will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine prevention

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ERENUMAB-AOOE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ERENUMAB-AOOE (Aimovig)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Episodic migraines (a type of headache)
   2. Chronic migraines (a type of headache)

B. If you have episodic migraines (0-14 headache days per month), approval also requires:
   1. You are 18 years of age or older
   2. Aimovig is prescribed for the preventive treatment of migraines (a type of headache)
   3. You will NOT use Aimovig concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine (a type of headache) prevention

C. If you have chronic migraines (15 or more headache days per month), approval also requires:
   1. You are 18 years of age or older
   2. Aimovig is prescribed for the preventive treatment of migraines (a type of headache)
   3. You will NOT use Aimovig concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine (a type of headache) prevention

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ERENUMAB-AOOE

RENEWAL CRITERIA

1. Is the request for the preventive treatment of migraines **AND** the patient meets the following criterion?
   - Aimovig will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine prevention

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has experienced a reduction in migraine or headache frequency of at least 2 days per month with Aimovig therapy
   - The patient has experienced a reduction in migraine severity with Aimovig therapy
   - The patient has experienced a reduction in migraine duration with Aimovig therapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ERENUMAB-AOOE (Aimovig)** requires the following rule(s) be met for renewal:
   A. The request is for the preventive treatment of migraines (a type of headache)
   B. You will NOT use Aimovig concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine (a type of headache) prevention
   C. You meet ONE of the following:
      1. You have experienced a decrease in migraine (a type of headache) or headache frequency of at least 2 days per month with Aimovig therapy
      2. You have experienced a decrease in migraine (a type of headache) severity with Aimovig therapy
      3. You have experienced a decrease in migraine (a type of headache) duration with Aimovig therapy

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ERGOTAMINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ERGOTAMINE TARTRATE	ERGOMAR	01869		GPI-10 (6700002010)	BRAND = ERGOMAR

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Is the request for the acute treatment of migraines (ICD-10 Group G43 except G43.7 and G43.E) and the patient meets **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Ergomar will NOT be used concurrently with any other dihydroergotamine or ergotamine product (e.g., Migranal [dihydroergotamine], Migergot [ergotamine-caffeine])

   If yes, continue to #2.
   If no, continue to #3.

2. Has the patient had a trial of or contraindication to **ALL** of the following preferred agents?
   - Two triptans (e.g., Imitrex [sumatriptan], Maxalt [rizatriptan], Relpax [eletriptan])
   - One generic dihydroergotamine product (e.g., dihydroergotamine mesylate 1mg/mL, dihydroergotamine mesylate 0.5mg/spry)
   - One CGRP inhibitor: Nurtec ODT (rimegepant), Ubrelvy (ubrogepant)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Is the request for the treatment of cluster headache (ICD-10 Groups G44.00, G44.01, G44.02) and the patient meets **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's symptoms were NOT adequately managed with abortive therapies (e.g., Imitrex [sumatriptan], Zomig [zolmitriptan], oxygen)
   - Ergomar will NOT be used concurrently with any additional dihydroergotamine or ergotamine product (e.g., Migranal [dihydroergotamine], Migergot [ergotamine-caffeine])
   - The patient had a trial of or contraindication to the clinical standard of care agent for preventive treatment: verapamil

   If yes, **approve for 3 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ERGOTAMINE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ERGOTAMINE (Ergomar)** requires the following rule(s) be met for approval:

A. The request is for ONE of the following:
   1. Acute (quick onset) treatment of migraines (a type of headache)
   2. Treatment of cluster headache (a type of headache)

B. If the request is for the acute treatment of migraines, approval also requires:
   1. You are 18 years of age or older
   2. You will NOT use Ergomar concurrently (at the same time) with any other dihydroergotamine or ergotamine medication (such as Migranal [dihydroergotamine], Migergot [ergotamine-caffeine])
   3. You have tried or have a contraindication to (harmful for you to use) ALL of the following preferred medications:
      a. Two triptans (such as Imitrex [sumatriptan], Maxalt [rizatriptan], Relpax [eletriptan])
      b. One generic dihydroergotamine product (such as dihydroergotamine mesylate 1mg/mL, dihydroergotamine mesylate 0.5mg/spry)
      c. One calcitonin gene-related peptide (CGRP) inhibitor: Nurtec ODT (rimegepant), Ubrelvy (ubrogepant)

C. If the request is for the treatment of cluster headache, approval also requires:
   1. You are 18 years of age or older
   2. Your symptoms were NOT adequately managed with abortive therapies (such as Imitrex [sumatriptan], Zomig [zolmitriptan], oxygen)
   3. You will NOT use Ergomar concurrently (at the same time) with any additional dihydroergotamine or ergotamine medication (such as Migranal [dihydroergotamine], Migergot [ergotamine-caffeine])
   4. You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication for preventive treatment: verapamil

ERGOTAMINE

RENEWAL CRITERIA

NOTE: For the request for the acute treatment of migraines, please refer to the Initial Criteria section.

1. Is the request for the treatment of cluster headache (ICD-10 Groups G44.00, G44.01, G44.02) and the patient meets **ALL** of the following criteria?
   - The patient had improvement in cluster headache frequency as compared to baseline
   - Ergomar will NOT be used concurrently with any additional dihydroergotamine or ergotamine product (e.g., Migranal [dihydroergotamine], Migergot [ergotamine-caffeine])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ERGOTAMINE (Ergomar)** requires the following rule(s) be met for renewal:
   A. The request is for the treatment of cluster headache (a type of headache)
   B. You had improvement in cluster headache frequency as compared to baseline (before treatment)
   C. You will NOT use Ergomar concurrently (at the same time) with any additional dihydroergotamine or ergotamine medication (such as Migranal [dihydroergotamine], Migergot [ergotamine-caffeine])

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Ergomar.

STANDARD NON-SELF-ADMINISTERED DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ERIBULIN (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ERIBULIN MESYLATE	HALAVEN, ERIBULIN MESYLATE	37256		GPI-10 (2150000920)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of metastatic breast cancer **AND** meet the following criterion?
   - The patient has tried at least TWO chemotherapeutic regimens in the adjuvant or metastatic setting, which include one agent from EACH of the following drug classes:
     - An anthracycline (e.g., daunorubicin [Cerubidine], doxorubicin [Adriamycin], epirubicin [Ellence])
     - A taxane (e.g., docetaxel [Taxotere], paclitaxel [Taxol, Abraxane])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of unresectable or metastatic liposarcoma **AND** meet the following criterion?
   - The patient has tried an anthracycline-containing regimen (e.g., daunorubicin [Cerubidine], doxorubicin [Adriamycin], epirubicin [Ellence])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ERIBULIN (Halaven)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Metastatic breast cancer (cancer that has spread to other parts of the body)
      2. Unresectable or metastatic liposarcoma (cancer that begins in the fat cells and cannot be completely removed with surgery or that has spread to other parts of the body)

   B. If you have metastatic breast cancer, approval also requires:
      1. You have tried at least TWO chemotherapeutic regimens (drugs used to treat cancer) in the adjuvant (add on treatment) or metastatic setting, which include one medication from EACH of the following drug classes:
         a. An anthracycline (a type of cancer treatment such as daunorubicin [Cerubidine], doxorubicin [Adriamycin], epirubicin [Ellence])
         b. A taxane (a type of cancer treatment such as docetaxel [Taxotere], paclitaxel [Taxol, Abraxane])

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ERLOTINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ERLOTINIB HCL	TARCEVA, ERLOTINIB HCL	26745		GPI-10 (2136002510)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
   - The patient's tumor has epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations as detected by an FDA-approved test
   - Tarceva (erlotinib) will NOT be used concurrently with an epidermal growth factor receptor (EGFR) tyrosine kinase-inhibitor (e.g., Gilotrif [afatinib], Tagrisso [osimertinib], Iressa [gefitinib], Vizimpro [dacomitinib])

   If yes, **approve for 12 months by GPID or GPI-14 as requested with the following quantity limits:**
   - **25mg: #2 per day.**
   - **100mg: #2 per day.**
   - **150mg: #3 per day.**

   If no, continue to #2.

2. Does the patient have a diagnosis of locally advanced, unresectable, or metastatic pancreatic cancer (ICD-10 C25) **AND** meet the following criterion?
   - The requested medication will be used in combination with gemcitabine

   If yes, **approve for 12 months by GPID or GPI-14 as requested with the following quantity limits:**
   - **25mg: #2 per day.**
   - **100mg: #2 per day.**
   - **150mg: #3 per day.**

   If no, do not approve.

ERLOTINIB

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ERLOTINIB (Tarceva)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Metastatic non-small cell lung cancer (type of lung cancer that has spread to other parts of the body)
   2. Locally advanced, unresectable, or metastatic pancreatic cancer (pancreas cancer that has spread or cannot be completely removed by surgery)

B. If you have metastatic non-small cell lung cancer, approval also requires:
   1. Your tumor has epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations (types of gene mutations or permanent change in the DNA that make up a gene) as detected by an FDA (Food and Drug Administration)- approved test
   2. You will NOT use Tarceva (erlotinib) concurrently (at the same time) with an epidermal growth factor receptor (EGFR) tyrosine kinase-inhibitor (such as Gilotrif [afatinib], Tagrisso [osimertinib], Iressa [gefitinib], Vizimpro [dacomitinib])

C. If you have locally advanced, unresectable, or metastatic pancreatic cancer, approval also requires:
   1. The requested medication will be used in combination with gemcitabine

Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ESKETAMINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ESKETAMINE HCL	SPRAVATO	41003		GPI-10 (5811002010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of treatment-resistant depression (TRD) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a psychiatrist or other Risk Evaluation and Mitigation Strategy (REMS)-certified provider
   - The patient has non-psychotic, unipolar depression
   - The patient does NOT have active substance abuse

   (**NOTE:** Treatment resistant depression is defined as a treatment failure after trial of two or more antidepressant medications of adequate dose and duration.)

   If yes, **approve for a total of 6 months by HICL or GPI-10 as follows:**
   - **INDUCTION DOSE: Approve for 30 days with a quantity limit of #1 per day.**
   - **MAINTENANCE DOSE: Approve for 5 months with a quantity limit of #12 per 28 days (Enter a start date of 2 days before the end of the induction dose approval).**

   If no, continue to #2.

2. Does the patient have a diagnosis of major depressive disorder (MDD) (ICD-10 Groups F32, F33) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Spravato will be used in combination with an oral antidepressant (e.g., Zoloft [sertraline], Cymbalta [duloxetine])
   - The patient has acute suicidal ideation or behavior
   - Therapy is prescribed by or in consultation with a psychiatrist or other Risk Evaluation and Mitigation Strategy (REMS)-certified provider
   - The patient has non-psychotic, unipolar depression
   - The patient does NOT have active substance abuse

   If yes, **approve for 2 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ESKETAMINE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ESKETAMINE (Spravato)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Treatment-resistant depression (TRD: depressive symptoms are not responding to treatment)
   2. Major depressive disorder (MDD: a type of mental illness)

B. If you have treatment-resistant depression, approval also requires:
   1. You are 18 years of age or older
   2. Therapy is prescribed by or in consultation with a psychiatrist (a type of mental health doctor) or other Risk Evaluation and Mitigation Strategy (REMS)-certified provider (a doctor that is authorized to prescribe the requested medication)
   3. You have non-psychotic, unipolar depression (you have depression that does not involve hallucinations or delusions)
   4. You do NOT have active substance (drug) abuse

C. If you have major depressive disorder, approval also requires:
   1. You are 18 years of age or older
   2. Spravato will be used in combination with an oral antidepressant (such as Zoloft [sertraline], Cymbalta [duloxetine])
   3. You have acute (short-term) suicidal ideation or behavior (thoughts of killing yourself)
   4. Therapy is prescribed by or in consultation with a psychiatrist (a type of mental health doctor) or other Risk Evaluation and Mitigation Strategy (REMS)-certified provider (a doctor that is authorized to prescribe the requested medication)
   5. You have non-psychotic, unipolar depression (you have depression that does not involve hallucinations or delusions)
   6. You do NOT have active substance (drug) abuse

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

ETANERCEPT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ETANERCEPT	ENBREL	18830		GPI-10 (6629003000)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a rheumatologist
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA
   - The patient had a trial of or contraindication to at least 3 months of treatment with ONE clinical standard of care agent: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #4 mL per 28 days.**
   If no, continue to #2.

2. Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (PJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - Therapy is prescribed by or in consultation with a rheumatologist
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PJIA

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #4 mL per 28 days.**
   If no, continue to #3.

3. Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - Therapy is prescribed by or in consultation with a rheumatologist or dermatologist
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #4 mL per 28 days.**
   If no, continue to #4.

ETANERCEPT

INITIAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a rheumatologist
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS
   - The patient had a trial of or contraindication to the clinical standard of care agent: an NSAID (e.g., naproxen, ibuprofen, meloxicam)

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #4 mL per 28 days.**
   If no, continue to #5.

5. Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
   - The patient is 4 years of age or older
   - Therapy is prescribed by or in consultation with a dermatologist
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

   If yes, continue to #6.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

6. Does the patient meet **ONE** of the following criteria?
   - The patient has had at least a 3-month trial of one clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy) for the treatment of PsO
   - The patient has a contraindication or intolerance to both clinical standard of care therapies: an immunosuppressant and PUVA (phototherapy) for the treatment of PsO
   - The patient is switching from a different biologic (e.g., Humira [adalimumab]), PDE-4 inhibitor (e.g., Otezla [apremilast]), or JAK inhibitor for the same indication

   If yes, continue to #7.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ETANERCEPT

INITIAL CRITERIA (CONTINUED)

7. Does the patient meet **ONE** of the following criteria?
   - The patient was previously stable on another biologic and is switching to Enbrel
   - The patient has psoriasis covering 3 percent or more of body surface area (BSA)
   - The patient has psoriatic lesions affecting the hands, feet, genital area, face, or scalp

   If yes, **approve for a total of 6 months by HICL or GPI-10. Please enter two approvals as follows:**
   - **FIRST APPROVAL: Approve for 3 months with a quantity limit of #8 mL per 28 days.**
   - **SECOND APPROVAL: Approve for 3 months with a quantity limit of #4 mL per 28 days.**

   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ETANERCEPT (Enbrel)** requires the following rule(s) be met for approval:

   A. You have ONE of the following:
      1. Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
      2. Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
      3. Psoriatic arthritis (PsA: a type of skin and joint condition)
      4. Ankylosing spondylitis (AS: a type of joint condition)
      5. Moderate to severe plaque psoriasis (PsO: a type of skin condition)

   B. If you have moderate to severe rheumatoid arthritis, approval also requires:
      1. You are 18 years of age or older
      2. Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
      3. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis
      4. You have tried at least 3 months of or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: a conventional synthetic DMARD (disease-modifying anti-rheumatic drug), such as methotrexate dose of at least 20 mg per week or maximally tolerated dose, leflunomide, hydroxychloroquine, or sulfasalazine

ETANERCEPT

INITIAL CRITERIA (CONTINUED)

C. If you have moderate to severe polyarticular juvenile idiopathic arthritis, approval also requires:
1. You are 2 years of age or older
2. Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
3. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis

D. If you have psoriatic arthritis, approval also requires:
1. You are 2 years of age or older
2. Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor) or dermatologist (a type of skin doctor)
3. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis

E. If you have ankylosing spondylitis, approval also requires:
1. You are 18 years of age or older
2. Therapy is prescribed by or in consultation with a rheumatologist (a type of immune system doctor)
3. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ankylosing spondylitis
4. You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: an NSAID (non-steroidal anti-inflammatory drug, such as naproxen, ibuprofen, meloxicam)

(Initial denial text continued on next page)

ETANERCEPT

INITIAL CRITERIA (CONTINUED)

F. If you have moderate to severe plaque psoriasis, approval also requires:

1. You are 4 years of age or older
2. Therapy is prescribed by or in consultation with a dermatologist (a type of skin doctor)
3. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis
4. You meet ONE of the following:
   a. You have had at least a 3-month trial of one clinical standard of care therapy: an oral immunosuppressant (cyclosporine, methotrexate, tacrolimus) or PUVA (phototherapy: a type of light therapy) for the treatment of plaque psoriasis
   b. You have a contraindication (harmful for you to use) or intolerance (side effect) to both clinical standard of care therapies: an immunosuppressant (a type of drug that decreases the body's immune response) and PUVA (phototherapy) for the treatment of plaque psoriasis
   c. You are switching from a different biologic (such as Humira [adalimumab]), PDE-4 (phosphodiesterase-4) inhibitor (such as Otezla [apremilast]), or JAK (Janus kinase) inhibitor for the same indication
5. You meet ONE of the following:
   a. You were previously stable on another biologic and are switching to Enbrel
   b. You have psoriasis covering 3 percent or more of body surface area (BSA)
   c. You have psoriatic lesions (rashes) affecting the hands, feet, genital area, face, or scalp

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ETANERCEPT

RENEWAL CRITERIA

1. Does the patient have a diagnosis of moderate to severe rheumatoid arthritis (RA) (ICD-10 M05.9, M06.9; Groups M05.7, M05.8, M06.0, M06.8) and meet **ALL** of the following criteria?
   - The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of RA

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4mL per 28 days.**
   If no, continue to #2.

2. Does the patient have a diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis (PJIA) (ICD-10 M08.3, Group M08.0) and meet **ALL** of the following criteria?
   - The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of PJIA

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4mL per 28 days.**
   If no, continue to #3.

3. Does the patient have a diagnosis of psoriatic arthritis (PsA) (ICD-10 Group L40.5) and meet **ALL** of the following criteria?
   - The patient has experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsA

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4mL per 28 days.**
   If no, continue to #4.

ETANERCEPT

RENEWAL CRITERIA (CONTINUED)

4. Does the patient have a diagnosis of ankylosing spondylitis (AS) (ICD-10 Group M45 except Group M45.A) and meet **ALL** of the following criteria?
   - The patient has experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) while on therapy
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of AS

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4mL per 28 days.** If no, continue to #5.

5. Does the patient have a diagnosis of moderate to severe plaque psoriasis (PsO) (ICD-10 L40.0) and meet **ALL** of the following criteria?
   - The patient has achieved or maintained clear or minimal disease or a decrease in PASI (Psoriasis Area and Severity Index) of at least 50 percent or more while on therapy
   - Enbrel will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor, PDE-4 inhibitor [e.g., Otezla (apremilast)]) for the treatment of PsO

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #4mL per 28 days.** If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ETANERCEPT (Enbrel)** requires the following rule(s) be met for renewal:
   A. You have ONE of the following:
      1. Moderate to severe rheumatoid arthritis (RA: a type of joint condition)
      2. Moderate to severe polyarticular juvenile idiopathic arthritis (PJIA: a type of joint condition)
      3. Psoriatic arthritis (PsA: a type of skin and joint condition)
      4. Ankylosing spondylitis (AS: a type of joint condition)
      5. Moderate to severe plaque psoriasis (PsO: a type of skin condition)

   (Renewal denial text continued on next page)

ETANERCEPT

RENEWAL CRITERIA (CONTINUED)

B. If you have moderate to severe rheumatoid arthritis, renewal also requires:
1. You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
2. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of rheumatoid arthritis

C. If you have moderate to severe polyarticular juvenile idiopathic arthritis, renewal also requires:
1. You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
2. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of polyarticular juvenile idiopathic arthritis

D. If you have psoriatic arthritis, renewal also requires:
1. You have experienced or maintained a 20 percent or greater improvement in tender joint count or swollen joint count while on therapy
2. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of psoriatic arthritis

E. If you have ankylosing spondylitis, renewal also requires:
1. You have experienced or maintained an improvement of at least 50 percent or 2 units (scale of 1-10) in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI: diagnostic test which allows a physician to determine the effectiveness of a current medication) while on therapy
2. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ankylosing spondylitis

F. If you have moderate to severe plaque psoriasis, renewal also requires:
1. You have achieved or maintained clear or minimal disease or a decrease in PASI (Psoriasis Area and Severity Index: used to measure the severity and extent of psoriasis) of at least 50 percent or more while on therapy
2. You will NOT use Enbrel concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor, PDE-4 [phosphodiesterase-4] inhibitor [such as Otezla (apremilast)]) for the treatment of plaque psoriasis

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ETELCALCETIDE (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ETELCALCETIDE	PARSABIV	44093		GPI-10 (3090523010)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of secondary hyperparathyroidism (HPT) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has chronic kidney disease
   - The patient is on hemodialysis
   - The patient is NOT taking another calcimimetic agent (e.g., cinacalcet)

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #36mL per 28 days.**
   If no, do not approve.
   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ETELCALCETIDE (Parsabiv)** requires the following rule(s) be met for approval:
   A. You have secondary hyperparathyroidism (too much parathyroid hormone due to low blood calcium levels)
   B. You are 18 years of age or older
   C. You have chronic kidney disease
   D. You are on hemodialysis (a way of removing toxins from your blood)
   E. You are NOT taking another calcimimetic agent (a drug that acts like calcium in the body
   F. such as cinacalcet)

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ETEPLIRSEN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ETEPLIRSEN	EXONDYS-51	43770		GPI-10 (7460003500)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of Duchenne muscular dystrophy (DMD) (ICD-10 G71.01) and meet **ALL** of the following criteria?
   - The patient has a confirmed mutation of the DMD gene that is amenable to exon 51 skipping therapy
   - Therapy is prescribed by or in consultation with a neurologist specializing in the treatment of DMD at a DMD treatment center
   - The patient is ambulatory
   - The patient is currently receiving treatment with or has a contraindication to corticosteroids (e.g., prednisone, prednisolone)

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **ETEPLIRSEN (Exondys 51)** requires the following rule(s) be met for approval:
   A. You have Duchenne muscular dystrophy (DMD: a type of muscle disorder)
   B. You have a confirmed mutation (abnormal change in a type of gene) in the DMD gene that will respond to exon 51 skipping therapy (a type of therapy to treat DMD)
   C. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor) specializing in the treatment of DMD at a DMD treatment center
   D. You are ambulatory (able to walk)
   E. You are currently receiving treatment with or you have a contraindication to (harmful for you to use) corticosteroids (such as prednisone, prednisolone)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

ETRASIMOD

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
ETRASIMOD ARGININE	VELSIPITY	49267		GPI-10 (5250452510)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of moderate to severe ulcerative colitis (UC) (ICD-10 Group K51) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a gastroenterologist
   - Velsipity will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of UC
   - The patient had a trial of or contraindication to TWO of the following preferred agents:
     - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
     - Skyrizi (risankizumab-rzaa)
     - Tremfya (guselkumab)
     - Omvoh (mirikizumab-mrkz)
     - Adalimumab-ryvk/adalimumab-aaty
     - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty])
     - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty])

   [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance programs do not qualify]

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

ETRASIMOD

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ETRASIMOD (Velsipity)** requires the following rule(s) be met for approval:

A. You have moderate to severe ulcerative colitis (UC: a type of digestive disorder)
B. You are 18 years of age or older
C. Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions)
D. You will NOT use Velsipity concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ulcerative colitis (a type of digestive disorder)
E. You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    1. Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
    2. Skyrizi (risankizumab-rzaa)
    3. Tremfya (guselkumab)
    4. Omvoh (mirikizumab-mrkz)
    5. Adalimumab-ryvk/adalimumab-aaty
    6. Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty])
    7. Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [such as adalimumab-ryvk/adalimumab-aaty])

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

ETRASIMOD

RENEWAL CRITERIA

1. Does the patient have a diagnosis of moderate to severe ulcerative colitis (UC) (ICD-10 Group K51) and meet **ALL** of the following criteria?
   - Velsipity will NOT be used concurrently with another systemic biologic (e.g., Humira [adalimumab]) or targeted small molecules (e.g., JAK inhibitor [e.g., Rinvoq (upadacitinib)], PDE-4 inhibitor) for the treatment of UC
   - The patient had a trial of or contraindication to TWO of the following preferred agents:
     - Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
     - Skyrizi (risankizumab-rzaa)
     - Tremfya (guselkumab)
     - Omvoh (mirikizumab-mrkz)
     - Adalimumab-ryvk/adalimumab-aaty
     - Xeljanz (tofacitinib IR or XR) (**NOTE**: Xeljanz requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty])
     - Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [e.g., adalimumab-ryvk/adalimumab-aaty])

     [**NOTE:** Pharmaceutical samples acquired from the prescriber or manufacturer assistance programs do not qualify]

     If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
     If no, do not approve.
     DENIAL TEXT: See the renewal denial text at the end of the guideline.

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **ETRASIMOD (Velsipity)** requires the following rule(s) be met for renewal:

A. You have moderate to severe ulcerative colitis (UC: a type of digestive disorder)
B. You will NOT use Velsipity concurrently (at the same time) with another systemic biologic (such as Humira [adalimumab]) or targeted small molecules (such as JAK [Janus kinase] inhibitor [such as Rinvoq (upadacitinib)], PDE-4 [phosphodiesterase-4] inhibitor) for the treatment of ulcerative colitis (a type of digestive disorder)
C. You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications:
    1. Yesintek (ustekinumab-kfce)/ustekinumab-aekn/Steqeyma (ustekinumab-stba)
    2. Skyrizi (risankizumab-rzaa)
    3. Tremfya (guselkumab)
    4. Omvoh (mirikizumab-mrkz)
    5. Adalimumab-ryvk/adalimumab-aaty
    6. Xeljanz (tofacitinib immediate-release or extended-release) (**NOTE**: Xeljanz requires additional criteria of inadequate response [medication did not work] or intolerance [side effect] to a tumor necrosis factor [TNF] blocker [such as adalimumab-ryvk/adalimumab-aaty])
    7. Rinvoq (upadacitinib) (**NOTE**: Rinvoq requires additional criteria of inadequate response or intolerance to a TNF blocker [such as adalimumab-ryvk/adalimumab-aaty])

NOTE: The use of pharmaceutical samples (from the prescriber or manufacturer assistance program) will not be considered when evaluating the medical condition or prior prescription history for drugs that require prior authorization.

PRIOR AUTHORIZATION GUIDELINES

EVEROLIMUS-AFINITOR DISPERZ

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EVEROLIMUS	AFINITOR DISPERZ, EVEROLIMUS		34589 34590 34592	GPI-14 (21532530007310 21532530007320 21532530007340)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of tuberous sclerosis complex (TSC)-associated subependymal giant cell astrocytoma (SEGA) (ICD-10 Q85.1 and D43.2) and meet **ALL** of the following criteria?
   - The patient is 1 year of age or older
   - The patient's diagnosis requires therapeutic intervention but cannot be curatively resected

   If yes, **approve all strengths for 12 months by GPID or GPI-14.**
   If no, continue to #2.

2. Does the patient have a diagnosis of tuberous sclerosis complex (TSC)-associated partial-onset seizures (ICD-10 Q85.1 and Groups G40.1, G40.2) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - The requested medication will be used as adjunctive treatment
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient had a trial of or contraindication to ONE preferred agent: an antiepileptic medication (e.g., vigabatrin, carbamazepine, levetiracetam, oxcarbazepine, valproic acid derivatives, clobazam, topiramate, lamotrigine)
   - The patient had a trial of or contraindication to the preferred agent: Epidiolex (cannabidiol)

   If yes, **approve all strengths for 12 months by GPID or GPI-14.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EVEROLIMUS-AFINITOR DISPERZ

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **EVEROLIMUS-AFINITOR DISPERZ** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Tuberous sclerosis complex (TSC: a rare type of tumor disorder)-associated subependymal giant cell astrocytoma (SEGA: a type of brain tumor)
   2. Tuberous sclerosis complex (TSC: a rare type of tumor disorder)-associated partial-onset seizures (type of seizure)

B. If you have tuberous sclerosis complex-associated subependymal giant cell astrocytoma, approval also requires:
   1. You are 1 year of age or older
   2. Your diagnosis requires therapeutic intervention but cannot be curatively resected (completely remove with surgery)

C. If you have tuberous sclerosis complex-associated partial-onset seizures, approval also requires:
   1. You are 2 years of age or older
   2. The requested medication will be used as adjunctive (add-on) treatment
   3. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
   4. You have tried or have a contraindication to (harmful for you to use) ONE preferred medication: an anti-seizure medication (such as vigabatrin, carbamazepine, levetiracetam, oxcarbazepine, valproic acid derivatives, clobazam, topiramate, lamotrigine)
   5. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Epidiolex (cannabidiol)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of advanced breast cancer (ICD-10 Group C50) and meet **ALL** of the following criteria?
- The patient is a postmenopausal woman
- The patient's breast cancer is hormone receptor (HR)-positive, HER2-negative
- The requested medication will be used in combination with exemestane
- The patient has failed or has a contraindication to treatment with Femara (letrozole) or Arimidex (anastrozole)

If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
- **2.5mg: #1 per day.**
- **5mg: #1 per day.**
- **7.5mg: #2 per day.**
- **10mg: #2 per day.**

If no, continue to #2.

2. Does the patient have a diagnosis of progressive neuroendocrine tumors (NET) with unresectable, locally advanced or metastatic disease (ICD-10 Group C7A) **AND** meet the following criterion?
- The patient is 18 years of age or older

If yes, continue to #3.
If no, continue to #4.

EVEROLIMUS-AFINITOR

INITIAL CRITERIA (CONTINUED)

3. Does the patient meet **ONE** of the following criteria?
   - The patient has neuroendocrine tumors of pancreatic origin (PNET)
   - The patient has well-differentiated, non-functional neuroendocrine tumors (NET) of gastrointestinal (GI) or lung origin

   If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
   - **2.5mg: #1 per day.**
   - **5mg: #1 per day.**
   - **7.5mg: #2 per day.**
   - **10mg: #2 per day.**

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

4. Does the patient have a diagnosis of advanced renal cell carcinoma (RCC) (ICD-10 Groups C64, C65) **AND** meet the following criterion?
   - The patient is 18 years of age or older

   If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
   - **2.5mg: #1 per day.**
   - **5mg: #1 per day.**
   - **7.5mg: #2 per day.**
   - **10mg: #2 per day.**

   If no, continue to #5.

5. Does the patient have a diagnosis of tuberous sclerosis complex (TSC)-associated renal angiomyolipoma (ICD-10 Q85.1 and D17.71) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient does NOT require immediate surgery

   If yes, **approve the requested strength for 12 months by GPID or GPI-14 as follows:**
   - **2.5mg: #1 per day.**
   - **5mg: #1 per day.**
   - **7.5mg: #2 per day.**
   - **10mg: #2 per day.**

   If no, continue to #6.

EVEROLIMUS-AFINITOR

INITIAL CRITERIA (CONTINUED)

6. Does the patient have a diagnosis of tuberous sclerosis complex (TSC)-associated subependymal giant cell astrocytoma (SEGA) (ICD-10 Q85.1 and D43.2) and meet **ALL** of the following criteria?
   - The patient is 1 year of age or older
   - The patient's diagnosis requires therapeutic intervention but cannot be curatively resected

   If yes, **approve all strengths for 12 months by GPID or GPI-14.**
   If no, continue to #7.

7. Does the patient have a diagnosis of tuberous sclerosis complex (TSC)-associated partial-onset seizures (ICD-10 Q85.1 and Groups G40.1, G40.2) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - The requested medication will be used as adjunctive treatment
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient had a trial of or contraindication to ONE clinical standard of care agent: an antiepileptic medication (e.g., vigabatrin, carbamazepine, levetiracetam, oxcarbazepine, valproic acid derivatives, clobazam, topiramate, lamotrigine)
   - The patient had a trial of or contraindication to the clinical standard of care agent: Epidiolex (cannabidiol)

   If yes, **approve all strengths for 12 months by GPID or GPI-14.**
   If no, do not approve.
   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EVEROLIMUS-AFINITOR (Afinitor, Torpenz, Yulithira)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Advanced breast cancer
      2. Progressive, neuroendocrine tumors (NET: a rare type of tumor) with unresectable (unable to remove by surgery), locally advanced (cancer that has spread to nearby tissue or lymph nodes) or metastatic disease (cancer that has spread to other parts of the body)
      3. Advanced renal cell carcinoma (RCC: type of kidney cancer)
      4. Tuberous sclerosis complex (TSC: a rare type of tumor disorder)-associated renal angiomyolipoma (type of kidney tumor)
      5. Tuberous sclerosis complex (TSC: a rare type of tumor disorder)-associated subependymal giant cell astrocytoma (SEGA: a type of brain tumor)
      6. Tuberous sclerosis complex (TSC: a rare type of tumor disorder)-associated partial-onset seizures (type of seizure)

EVEROLIMUS-AFINITOR

INITIAL CRITERIA (CONTINUED)

B. If you have advanced breast cancer, approval also requires:
1. You are a postmenopausal (after menopause) woman
2. Your breast cancer is hormone receptor (HR: a type of protein)-positive, human epidermal growth factor receptor 2 (HER2: a type of protein)-negative
3. The requested medication will be used in combination with exemestane
4. You have failed or have a contraindication to (harmful for you to use) treatment with Femara (letrozole) or Arimidex (anastrozole)

C. If you have progressive neuroendocrine tumors with unresectable, locally advanced or metastatic disease, approval also requires:
1. You are 18 years of age or older
2. You meet ONE of the following:
   a. You have neuroendocrine tumors of pancreatic origin (PNET: tumor in the pancreas)
   b. You have well-differentiated, non-functional neuroendocrine tumors (NET: a rare type of tumor) of gastrointestinal (GI: relating to the digestive system) or lung origin

D. If you have advanced renal cell carcinoma, approval also requires:
1. You are 18 years of age or older

E. If you have tuberous sclerosis complex-associated renal angiomyolipoma, approval also requires:
1. You are 18 years of age or older
2. You do NOT require immediate surgery

F. If you have tuberous sclerosis complex-associated subependymal giant cell astrocytoma, approval also requires:
1. You are 1 year of age or older
2. Your diagnosis requires therapeutic intervention but cannot be curatively resected (completely removed with surgery)

G. If you have tuberous sclerosis complex-associated partial-onset seizures, approval also requires:
1. You are 2 years of age or older
2. The requested medication will be used as adjunctive (add-on) treatment
3. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
4. You have tried or have a contraindication to (harmful for you to use) ONE clinical standard of care medication: an anti-seizure medication (such as vigabatrin, carbamazepine, levetiracetam, oxcarbazepine, valproic acid derivatives, clobazam, topiramate, lamotrigine)
5. You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: Epidiolex (cannabidiol)

EVINACUMAB-DGNB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
EVINACUMAB-DGNB	EVKEEZA	47113		GPI-10 (3939203020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of homozygous familial hypercholesterolemia (HoFH) (ICD-10 E78.01) and meet **ALL** of the following criteria?
   - The patient is 1 year of age or older
   - Evkeeza will be used as an adjunct to other low-density lipoprotein-cholesterol (LDL-C) lowering therapies
   - Therapy is prescribed by or in consultation with a cardiologist, endocrinologist, or lipidologist
   - The patient had a trial of or contraindication to Zetia (ezetimibe)

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient is currently taking a high-intensity statin (atorvastatin 40-80 mg daily, rosuvastatin 20-40 mg daily)
   - Given that the patient cannot tolerate a high-intensity statin (atorvastatin 40-80 mg daily, rosuvastatin 20-40 mg daily), the patient is currently taking a maximally tolerated dose of any statin

   If yes, continue to #3.
   If no, continue to #4.

3. Will the patient continue statin treatment as described above in combination with Evkeeza?

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

EVINACUMAB-DGNB

INITIAL CRITERIA (CONTINUED)

4. Does the patient meet **ONE** of the following criteria?
   - The patient has an absolute contraindication to statin therapy (e.g., active decompensated liver disease, nursing female, pregnancy or plans to become pregnant, hypersensitivity reaction)
   - The patient has complete statin intolerance (defined by severe and intolerable adverse effects) (e.g., creatine kinase elevation at least 10 times the upper limit of normal, liver function test elevation at least 3 times the upper limit of normal, rhabdomyolysis, severe muscle weakness leading to temporary disability, fall, or inability to use a major muscle group) that have occurred with trials of at least TWO separate statins AND have improved with the discontinuation of each statin

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

5. Does the patient meet **ONE** of the following criteria?
   - The patient had a trial of or contraindication to the preferred agent: Repatha (evolocumab)
   - The patient lacks functioning low-density lipoprotein (LDL) receptors

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EVINACUMAB-DGNB (Evkeeza)** requires the following rule(s) be met for approval:
   A. You have homozygous familial hypercholesterolemia (HoFH: type of inherited high cholesterol)
   B. You are 1 year of age or older
   C. Evkeeza will be used as an adjunct (add-on) to other low-density lipoprotein-cholesterol (LDL-C) lowering therapies
   D. Therapy is prescribed by or in consultation with a cardiologist (a type of heart doctor), endocrinologist (a type of hormone doctor), or lipidologist (a type of cholesterol doctor)
   E. You have tried or have a contraindication to (harmful for you to use) Zetia (ezetimibe)
   F. You meet ONE of the following:
      1. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Repatha (evolocumab)
      2. You do NOT have functional LDL (low-density lipoprotein) receptors

(Initial denial text continued on the next page)

EVINACUMAB-DGNB

INITIAL CRITERIA (CONTINUED)

G. If you are statin tolerant, approval also requires:
1. You meet ONE of the following:
   a. You are currently taking a high-intensity statin (atorvastatin 40-80 mg daily, rosuvastatin 20-40 mg daily)
   b. You did not tolerate a high-intensity statin (atorvastatin 40-80 mg daily, rosuvastatin 20-40 mg daily), but you are currently taking a maximally tolerated dose of any statin
2. You will continue statin treatment in combination with Evkeeza

H. If you are statin intolerant, approval also requires ONE of the following:
1. You have an absolute contraindication to (harmful for you to use) statin therapy (such as active decompensated liver disease [symptoms related to liver damage], nursing [breastfeeding] female, pregnancy or plans to become pregnant, hypersensitivity [allergic] reaction)
2. You have complete statin intolerance (defined by severe and intolerable adverse effects) that have occurred with trials of at least TWO separate statins, AND the adverse effects have improved when you stopped each statin. Some adverse effects include: creatine kinase (type of protein) elevation at least 10 times the upper limit of normal, liver function test elevation at least 3 times the upper limit of normal, rhabdomyolysis (severe muscle break down), severe muscle weakness leading to temporary disability, fall, or inability to use a major muscle group.

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

EVINACUMAB-DGNB

RENEWAL CRITERIA

1. Does the patient have a diagnosis of homozygous familial hypercholesterolemia (HoFH) (ICD-10 E78.01) **AND** meet the following criterion?
   - The patient's low-density lipoprotein-cholesterol (LDL-C) level has decreased while on Evkeeza

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has continued concurrent therapy with a maximally tolerated dose of ANY statin
   - The patient has an absolute contraindication to statin therapy
   - The patient has complete statin intolerance

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **EVINACUMAB-DGNB (Evkeeza)** requires the following rule(s) be met for renewal:
   A. You have homozygous familial hypercholesterolemia (HoFH: type of inherited high cholesterol)
   B. Your low-density lipoprotein-cholesterol (LDL-C) level has decreased while on Evkeeza
   C. You meet ONE of the following:
      1. You have continued to take a maximally tolerated dose of ANY statin along with Evkeeza
      2. You have an absolute contraindication to (harmful for you to use) statin therapy
      3. You have complete statin intolerance (severe and intolerable adverse effects)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Evkeeza.

FAM-TRASTUZUMAB DERUXTECAN-NXKI

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FAM-TRASTUZUMAB DERUXTECAN-NXKI	ENHERTU	46262		GPI-10 (2135507055)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of breast cancer (ICD-10 Group C50)?

   If yes, continue to #2.
   If no, continue to #8.

2. Is the patient's cancer unresectable or metastatic?

   If yes, continue to #3.
   If no, continue to #6.

3. Is the patient's cancer HER2-positive (IHC 3+ or ISH positive) and the patient meets **ONE** of the following criteria?
   - The patient has received a prior anti-HER2-based regimen (e.g., Herceptin [trastuzumab], Kadcyla [ado-trastuzumab emtansine]) in the metastatic setting
   - The patient has received a prior anti-HER2-based regimen (e.g., Herceptin [trastuzumab], Kadcyla [ado-trastuzumab emtansine]) in the neoadjuvant or adjuvant setting AND has developed disease recurrence during or within 6 months of completing therapy
   - Enhertu will be used in combination with pertuzumab (Perjeta), when cancer is determined by an FDA-authorized test

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

4. Is the patient's cancer HR-positive, HER2-low (IHC 1+ or IHC 2+/ISH-) or HER2-ultralow (IHC 0 with membrane staining), as determined by an FDA-authorized test, **AND** the patient meets the following criterion?
   - The patient's disease has progressed on at least one endocrine therapy (e.g., letrozole, anastrozole, tamoxifen) in the metastatic setting

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #5.

FAM-TRASTUZUMAB DERUXTECAN-NXKI

GUIDELINES FOR USE (CONTINUED)

5. Is the patient's cancer HER2-low (IHC 1+ or IHC 2+/ISH-), as determined by an FDA-authorized test and the patient meets **ONE** of the following criteria?
   - The patient has received prior chemotherapy in the metastatic setting
   - The patient has developed disease recurrence during or within 6 months of completing adjuvant chemotherapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

   Is the patient's cancer in early Stage II or III and meets **ALL** of the following criteria?
6. Is the patient's cancer in early stage and meets **ALL** of the following criteria?
   - The patient's cancer is HER2-positive (IHC3+ or ISH+)
   - Enhertu will be used as adjuvant treatment
   - The patient has residual invasive disease following neoadjuvant trastuzumab and taxane- based treatment

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

7. Does the patient have unresectable or metastatic non-small cell lung cancer (NSCLC) (ICD-10 Group C34) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's tumors have activating HER2 (ERBB2) mutations, as determined by an FDA-authorized test
   - The patient has received a prior systemic therapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #9.

FAM-TRASTUZUMAB DERUXTECAN-NXKI

GUIDELINES FOR USE (CONTINUED)

8. Does the patient have a diagnosis of locally advanced or metastatic gastric OR gastroesophageal junction (GEJ) adenocarcinoma (ICD-10 Group C16) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's cancer is HER2-positive (IHC 3+ or IHC 2+/ISH positive)
   - The patient has received a prior trastuzumab-based regimen

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #10.

9. Does the patient have a diagnosis of unresectable or metastatic solid tumors and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's cancer is HER2-positive (IHC 3+)
   - The patient has received prior systemic treatment and has no satisfactory alternative treatment options

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FAM-TRASTUZUMAB DERUXTECAN-NXKI (Enhertu)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Unresectable or metastatic breast cancer (a type of cancer that cannot be removed by surgery or has spread to other parts of the body)
      2. Early breast cancer
      3. Unresectable or metastatic non-small cell lung cancer (NSCLC) (a type of lung cancer that cannot be removed by surgery or has spread to other parts of the body)
      4. Locally advanced or metastatic gastric OR gastroesophageal junction (GEJ) adenocarcinoma (a type of digestive system cancer that has spread to nearby tissue or lymph nodes, or has spread to other parts of the body)
      5. Unresectable or metastatic solid tumors (a type of abnormal mass that cannot be removed by surgery or has spread to other parts of the body)

   (Denial text continued on next page)

FAM-TRASTUZUMAB DERUXTECAN-NXKI

GUIDELINES FOR USE (CONTINUED)

B. If you have unresectable or metastatic breast cancer, approval also requires ONE of the following:

1. Your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-positive (IHC 3+ or ISH positive), and you meet ONE of the following:
   a. You have received a prior anti-HER2-based regimen (such as Herceptin [trastuzumab], Kadcyla [ado-trastuzumab emtansine]) in the metastatic setting (cancer has spread to other parts of the body)
   b. You have received a prior anti-HER2-based regimen (such as Herceptin [trastuzumab], Kadcyla [ado-trastuzumab emtansine]) in the neoadjuvant (given before main treatment) or adjuvant (additional treatment) setting AND the disease returned during or within 6 months of completing therapy
   c. You will use Enhertu in combination with pertuzumab (Perjeta), when your cancer is determined by a Food and Drug Administration (FDA)-authorized test
2. Your cancer is hormone receptor (HR: a type of protein)-positive, human epidermal growth factor receptor 2 (HER2: a type of protein)-low (IHC 1+ or IHC 2+/ISH-) or HER2-ultralow (IHC 0 with membrane staining), as determined by a Food and Drug Administration (FDA)-authorized test, AND your disease has progressed (worsened) while on at least one endocrine therapy (such as letrozole, anastrozole, tamoxifen) in the metastatic setting (cancer has spread to other parts of the body)
3. Your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-low (IHC 1+ or IHC 2+/ISH-), as determined by a Food and Drug Administration (FDA)-authorized test, and you meet ONE of the following:
   a. You have received a prior chemotherapy (a type of cancer treatment) in the metastatic setting (cancer has spread to other parts of the body)
   b. You have developed disease recurrence (disease has returned) during or within 6 months of completing adjuvant (additional) chemotherapy

C. If you have early breast cancer, approval also requires ONE of the following:

1. Your cancer is early Stage II or III; your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-positive (IHC 3+ or ISH positive), as determined by a Food and Drug Administration (FDA)-authorized test; AND Enhertu will be used as a neoadjuvant treatment (given before main treatment) and followed by a taxane (such as paclitaxel), trastuzumab, and pertuzumab (THP)
2. Your cancer is in early stage; your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-positive (IHC 3+ or ISH positive); Enhertu will be used as adjuvant treatment (additional treatment); and you have residual invasive disease (remaining disease that has spread) following neoadjuvant (given before main treatment) trastuzumab and taxane-based treatment

(Denial text continued on next page)

FAM-TRASTUZUMAB DERUXTECAN-NXKI

GUIDELINES FOR USE (CONTINUED)

D. If you have unresectable or metastatic non-small cell lung cancer, approval also requires:
1. You are 18 years of age or older
2. Your tumors have activating HER2 (ERBB2) mutations (abnormal change in a type of gene), as determined by a Food and Drug Administration (FDA)-authorized test
3. You have received a prior systemic therapy (treatment that targets the entire body)

E. If you have locally advanced or metastatic gastric or gastroesophageal junction adenocarcinoma, approval also requires:
1. You are 18 years of age or older
2. Your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-positive (IHC 3+ or IHC 2+/ISH positive)
3. You have received a prior trastuzumab-based (type of medication) regimen

F. If you have unresectable or metastatic solid tumors, approval also requires:
1. You are 18 years of age or older
2. Your cancer is human epidermal growth factor receptor 2 (HER2: a type of protein)-positive (IHC 3+)
3. You have received previous systemic treatment (therapy that targets the entire body) and have no other satisfactory treatment options

FARICIMAB-SVOA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FARICIMAB-SVOA	VABYSMO	47786		GPI-10 (8665252270)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of neovascular (wet) age-related macular degeneration (nAMD) (ICD-10 Group H35.32) and meet **ALL** of the following criteria?
   Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
   Vabysmo will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Eylea [aflibercept], Lucentis [ranibizumab], Beovu [brolucizumab-dbll])

   If yes, **approve for 4 months by HICL or GPI-10 for 4 fills with a quantity limit of #0.1mL per 21 days.**

   If no, continue to #2.

2. Does the patient have a diagnosis of diabetic macular edema (DME) (ICD-10 E08.311, E08.321, E08.331, E08.341, E08.351, E08.37, E09.311, E09.321, E09.331, E09.341, E09.351, E09.37, E10.311, E10.321, E10.331, E10.341, E10.351, E10.37, E11.311, E11.321, E11.331, E11.341, E11.351, E11.37, E13.311, E13.321, E13.331, E13.341, E13.351, E13.37) and meet **ALL** of the following criteria?
   Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
   Vabysmo will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Eylea [aflibercept], Lucentis [ranibizumab], Beovu [brolucizumab-dbll])

   If yes, **approve for 6 months by HICL or GPI-10 for 6 fills with a quantity limit of #0.1mL per 21 days.**

   If no, continue to #3.

FARICIMAB-SVOA

INITIAL CRITERIA (CONTINUED)

3. Does the patient have a diagnosis of macular edema following retinal vein occlusion (RVO) (ICD-10 H34.9; Groups H34.81, H34.83) and meet **ALL** of the following criteria?
   Therapy is prescribed by or in consultation with an ophthalmologist or retina specialist
   Vabysmo will NOT be used concurrently with other intravitreal VEGF inhibitors (e.g., Eylea [aflibercept], Lucentis [ranibizumab])
   The patient had a trial of or contraindication to ONE of the following preferred agents: Cimerli (ranibizumab-eqrn), Byooviz (ranibizumab-nuna)

   If yes**, approve for 6 months by HICL or GPI-10 with a quantity limit of #0.1mL per 21 days.**

   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FARICIMAB-SVOA (Vabysmo)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Neovascular (wet) age-related macular degeneration (nAMD: a type of eye condition)
      2. Diabetic macular edema (DME: a type of eye condition caused by high blood sugar)
      3. Macular edema following retinal vein occlusion (RVO: a type of eye condition)

   B. If you have neovascular (wet) age-related macular degeneration, approval also requires:
      1. Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
      2. You will NOT use Vabysmo concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Eylea [aflibercept], Lucentis [ranibizumab], Beovu [brolucizumab-dbll])

   C. If you have diabetic macular edema, approval also requires:
      1. Therapy is prescribed by or in consultation with an ophthalmologist (a type of eye doctor) or retina (a part of the eye) specialist
      2. You will NOT use Vabysmo concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Eylea [aflibercept], Lucentis [ranibizumab], Beovu [brolucizumab-dbll])

FARICIMAB-SVOA

RENEWAL CRITERIA (CONTINUED)

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FARICIMAB-SVOA (Vabysmo)** requires the following rule(s) be met for renewal:

A. You have ONE of the following:
   1. Neovascular (wet) age-related macular degeneration (nAMD: a type of eye condition)
   2. Diabetic macular edema (DME: a type of eye condition caused by high blood sugar)
   3. Macular edema following retinal vein occlusion (RVO: a type of eye condition)

B. If you have neovascular (wet) age-related macular degeneration, renewal also requires:
   1. You have maintained or improved visual acuity (vison clarity or sharpness)
   2. You will NOT use Vabysmo concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Eylea [aflibercept], Lucentis [ranibizumab], Beovu [brolucizumab-dbll])

C. If you have diabetic macular edema, renewal also requires:
   1. You have maintained or improved visual acuity (vison clarity or sharpness)
   2. You will NOT use Vabysmo concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Eylea [aflibercept], Lucentis [ranibizumab], Beovu [brolucizumab-dbll])

D. If you have macular edema following retinal vein occlusion, renewal also requires:
   1. You have maintained or improved visual acuity (vison clarity or sharpness)
   2. You will NOT use Vabysmo concurrently (at the same time) with other intravitreal (into the eye) vascular endothelial growth factor (VEGF) inhibitors (such as Eylea [aflibercept], Lucentis [ranibizumab])

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

FECAL MICROBIOTA CAPSULE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FECAL MICROBIO SPORE, LIVE-BRPK	VOWST	48888		GPI-10 (5252202010)	

GUIDELINES FOR USE

1. Is the request for the prevention of recurrent *Clostridioides difficile* infection (CDI) (ICD-10 A04.71) and does the patient meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a gastroenterologist or infectious disease specialist

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

2. Has the patient previously received treatment with Vowst?

   If yes, continue to #4.
   If no, continue to #3.

3. Has the patient completed antibiotic treatment (e.g., vancomycin [Vancocin], fidaxomicin [Dificid]) for the treatment of recurrent CDI (defined as at least 3 CDI episodes)?

   If yes, **approve for 30 days by HICL or GPI-10 for 1 fill with a quantity limit of #12 per 3 days.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

4. Does the patient meet **ALL** of the following criteria?
   - The patient had treatment failure, defined as the presence of CDI diarrhea within 8 weeks of the first dose of Vowst, AND a positive stool test for *C. difficile*
   - The patient has NOT previously received more than 1 treatment course of Vowst AND the start of that treatment course was at least 12 days and not more than 8 weeks prior

   If yes, **approve for 30 days by HICL or GPI-10 for 1 fill with a quantity limit of #12 per 3 days.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

FECAL MICROBIOTA CAPSULE

GUIDELINES FOR USE

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FECAL MICROBIOTA CAPSULE (Vowst)** requires the following rule(s) be met for approval:

A. Vowst will be used for the prevention of recurrent *Clostridioides difficile (C. difficile)* infection (CDI: a bacterial infection)
B. You are 18 years of age or older
C. Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions) or infectious disease specialist (a doctor who specializes in the treatment of infections)
D. If you have NOT previously been treated with Vowst, approval also requires:
   1. You have completed antibiotic (such as vancomycin [Vancocin], fidaxomicin [Dificid]) treatment for recurrent *Clostridioides difficile* infection (CDI: a bacterial infection) (defined as at least 3 CDI episodes)
E. If you have previously been treated with Vowst, approval also requires:
   1. You had treatment failure, defined as the presence of *Clostridioides difficile* infection (CDI: a bacterial infection) diarrhea within 8 weeks of the first dose of Vowst, AND a positive stool test for *C. difficile* (a type of bacteria)
   2. You have NOT previously received more than 1 treatment course of Vowst AND the start of that treatment course was at least 12 days and not more than 8 weeks prior

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Vowst.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

FECAL MICROBIOTA SUSPENSION

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FECAL MICROBIOTA, LIVE-JSLM	REBYOTA	48488		GPI-10 (5252201030)	

GUIDELINES FOR USE

1. Is the request for the prevention of recurrent *Clostridioides difficile* infection (CDI) (ICD-10 A04.71) and does the patient meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Therapy is prescribed by or in consultation with a gastroenterologist or infectious disease specialist

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

2. Has the patient previously received treatment with Rebyota?

   If yes, continue to #4.
   If no, continue to #3.

3. Has the patient completed antibiotic treatment (e.g., vancomycin [Vancocin]) for the treatment of recurrent CDI (defined as at least 3 CDI episodes) at least 24 hours prior?

   If yes, **approve for 30 days by HICL or GPI-10 for 1 fill with a quantity limit of #150mL.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

4. Does the patient meet **ALL** of the following criteria?
   - The patient had treatment failure, defined as the presence of CDI diarrhea within 8 weeks of the first dose of Rebyota, AND a positive stool test for *C. difficile*
   - The patient has NOT previously received more than 1 dose of Rebyota AND that dose was at least 7 days and not more than 8 weeks prior

   If yes, **approve for 30 days by HICL or GPI-10 for 1 fill with a quantity limit of #150mL.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

FECAL MICROBIOTA SUSPENSION

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FECAL MICROBIOTA SUSPENSION (Rebyota)** requires the following rule(s) be met for approval:

A. Rebyota will be used for the prevention of recurrent *Clostridioides difficile* (*C. difficile*) infection (CDI: a bacterial infection)
B. You are 18 years of age or older
C. Therapy is prescribed by or in consultation with a gastroenterologist (a doctor who treats digestive conditions) or infectious disease specialist (a doctor who specializes in the treatment of infections)
D. If you have NOT previously been treated with Rebyota, approval also requires:
   1. You have completed antibiotic (such as vancomycin [Vancocin]) treatment for recurrent *Clostridioides difficile* infection (CDI: a bacterial infection) (defined as at least 3 CDI episodes) at least 24 hours prior
E. If you have previously been treated with Rebyota, approval also requires:
   1. You had treatment failure, defined as the presence of *Clostridioides difficile* infection (CDI: a bacterial infection) diarrhea within 8 weeks of the first dose of Rebyota, AND a positive stool test for *C. difficile* (a type of bacteria)
   2. You have NOT previously received more than 1 dose of Rebyota AND that dose was at least 7 days and not more than 8 weeks prior

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Rebyota.

FEDRATINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FEDRATINIB DIHYDROCHLORIDE	INREBIC	45953		GPI-10 (2153752020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of intermediate-2 or high-risk primary or secondary (post-polycythemia vera or post-essential thrombocythemia) myelofibrosis (MF) (ICD-10 D47.1, D75.81) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient had a trial of or contraindication to Jakafi (ruxolitinib)

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, do not approve.
   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FEDRATINIB (Inrebic)** requires the following rule(s) be met for approval:
   A. You have intermediate-2 or high-risk primary or secondary (post-polycythemia vera [type of blood cell disorder] or post-essential thrombocythemia [type of blood cell disorder]) myelofibrosis (type of bone marrow cancer)
   B. You are 18 years of age or older
   C. You have tried or have a contraindication to (harmful for you to use) Jakafi (ruxolitinib)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FEDRATINIB

RENEWAL CRITERIA

1. Does the patient have a diagnosis of intermediate-2 or high-risk primary or secondary (post-polycythemia vera or post-essential thrombocythemia) myelofibrosis (MF) (ICD-10 D47.1, D75.81)?

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Has the patient shown symptom improvement by meeting **ONE** of the following criteria?
   - The patient has a spleen volume reduction of at least 35% from baseline
   - The patient has at least a 50% reduction in total symptom score (e.g., Myeloproliferative Neoplasm Symptom Assessment Form Total Symptom Score [MPN-SAF TSS], modified Myelofibrosis Symptom Assessment Form [MFSAF] v2.0)
   - The patient has at least a 50% reduction in palpable spleen length

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FEDRATINIB (Inrebic)** requires the following rule(s) be met for renewal:
   A. You have intermediate-2 or high-risk primary or secondary (post-polycythemia vera [type of blood cell disorder] or post-essential thrombocythemia [type of blood cell disorder]) myelofibrosis (type of bone marrow cancer)
   B. You have shown symptom improvement by meeting ONE of the following:
      1. You have a spleen volume reduction of at least 35% from baseline (before treatment)
      2. You have at least a 50% reduction in total symptom score (such as Myeloproliferative Neoplasm Symptom Assessment Form Total Symptom Score [MPN-SAF TSS], modified Myelofibrosis Symptom Assessment Form [MFSAF] v2.0)
      3. You have at least a 50% reduction in palpable (can be felt by external examination) spleen length

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FENFLURAMINE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FENFLURAMINE HCL	FINTEPLA	02116		GPI-10 (7260002810)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of seizures associated with Dravet syndrome (ICD-10 Group G40.83) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient had a trial of or contraindication to ONE of the following: valproic acid derivative, clobazam

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #11.8mL per day.**
   If no, continue to #2.

2. Does the patient have a diagnosis of seizures associated with Lennox-Gastaut syndrome (LGS) (ICD-10 Group G40.81) and meet **ALL** of the following criteria?
   - The patient is 2 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient had a trial of or contraindication to valproic acid or derivatives
   - The patient had a trial of or contraindication to TWO of the following: Epidiolex, rufinamide, felbamate, clobazam, topiramate, lamotrigine, clonazepam

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #11.8mL per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

FENFLURAMINE

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FENFLURAMINE (Fintepla)** requires the following rule(s) be met for approval:

A. You have seizures associated with ONE of the following:
   1. Dravet syndrome (a rare type of seizure)
   2. Lennox-Gastaut syndrome (LGS: a type of seizure disorder in young children)

B. If you have Dravet syndrome, approval also requires:
   1. You are 2 years of age or older
   2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
   3. You have tried or have a contraindication to (harmful for you to use) ONE of the following: valproic acid derivative, clobazam

C. If you have Lennox-Gastaut syndrome, approval also requires:
   1. You are 2 years of age or older
   2. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
   3. You have tried or have a contraindication to (harmful for you to use) valproic acid or derivatives
   4. You have tried or have a contraindication to (harmful for you to use) TWO of the following: Epidiolex, rufinamide, felbamate, clobazam, topiramate, lamotrigine, clonazepam

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

STANDARD COMMERCIAL DRUG FORMULARY
PRIOR AUTHORIZATION GUIDELINES

FENTANYL TRANSDERMAL PATCH

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FENTANYL	DURAGESIC, FENTANYL		24635 19200 37952 19201 37947 19202 37948 19203	GPI-12 (651000250086)	

GUIDELINES FOR USE

1. Does the patient meet the definition of opioid tolerance (defined as those who are taking, for one week or longer, at least 60mg oral morphine per day, 25mcg transdermal fentanyl/hour, 30mg oral oxycodone/day, 25mg oral oxymorphone/day, 8mg oral hydromorphone/day, or an equianalgesic dose of another opioid)?

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

2. Does the request form indicate that this medication will be used on an "as needed" or “PRN” basis?

   If yes, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

   If no, continue to #3.

3. Is the request for every 72 hours dosing?

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength with the following quantity limits:**
   - **FOR EVERY 72 HOUR DOSING (12, 25, 37.5, 50, 62.5, 75, 87.5mcg/hr): #10 patches per 30 days.**
   - **FOR 100mcg/hr: up to #20 patches per 30 days.**

   If no, continue to #4.

4. Is the request for every 48 hours dosing?

   If yes, continue to #5.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

FENTANYL TRANSDERMAL PATCH

GUIDELINES FOR USE (CONTINUED)

5. Has the patient tried every 72 hours dosing?

   If yes, **approve for 12 months by GPID or GPI-14 for the requested strength with the following quantity limits:**
   - **FOR EVERY 48 HOUR DOSING (12, 25, 37.5, 50, 62.5, 75, 87.5mcg/hr): #15 patches per 30 days.**
   - **FOR 100mcg/hr: up to #30 patches per 30 days.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FENTANYL TRANSDERMAL PATCH (Duragesic)** requires the following rule(s) be met for approval:
   A. You meet the definition of opioid tolerance. This is defined as those who are taking, for one week or longer, at least 60mg oral morphine per day, 25mcg transdermal fentanyl/hour, 30mg oral oxycodone/day, 25mg oral oxymorphone/day, 8mg oral hydromorphone/day, or an equianalgesic dose (equal pain-relieving dose) of another opioid
   B. The requested medication is not prescribed on an 'as needed' basis
   C. Requests for every 48 hours dosing requires a trial of transdermal (absorbed through the skin) fentanyl patch dosed every 72 hours

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Duragesic.

FENTANYL TRANSMUCOSAL AGENTS

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FENTANYL CITRATE	ACTIQ, FENTANYL CITRATE	01747		GPI-10 (6510002510)	FDB & Medi-Span: ROUTE = BUCCAL

GUIDELINES FOR USE

1. Does the patient have a diagnosis of cancer-related pain (ICD-10 G89.3) and meet **ALL** of the following criteria?
   - The patient is on a maintenance dose of a controlled-release pain medication (e.g., MS Contin [morphine extended-release], Oxycontin [oxycodone extended-release], Duragesic [fentanyl patch])
   - The patient has difficulty swallowing tablets or capsules, OR the patient had a trial of or contraindication to ONE clinical standard of care immediate-release oral pain agent (e.g., morphine sulfate immediate-release [MSIR], oxycodone/acetaminophen, hydrocodone/acetaminophen, codeine/acetaminophen, hydromorphone, meperidine)

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

2. Is the request for generic fentanyl citrate lozenge?

   If yes, **approve for 6 months by GPID or GPI-14 for the requested strength with a quantity limit of #120 per month.**

   If no, continue to #3.

3. Has the patient had a trial of or contraindication to the preferred agent: generic fentanyl citrate lozenge?

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #120 per month.**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

FENTANYL TRANSMUCOSAL AGENTS

GUIDELINES FOR USE (CONTINUED

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FENTANYL TRANSMUCOSAL AGENTS (Actiq)** requires the following rule(s) be met for approval:

A. You have cancer-related pain
B. You are on a maintenance dose of a controlled-release pain medication (such as MS Contin [morphine extended-release], Oxycontin [oxycodone extended-release], Duragesic [fentanyl patch])
C. You have difficulty swallowing tablets or capsules, OR you have tried or have a contraindication to (harmful for you to use) ONE clinical standard of care oral immediate- release pain medication (such as morphine sulfate immediate-release [MSIR], oxycodone/acetaminophen, hydrocodone/acetaminophen, codeine/acetaminophen, hydromorphone, meperidine)
D. You have tried or have a contraindication to (harmful for you to use) the preferred medication: generic fentanyl citrate lozenge (which also requires a prior authorization)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Actiq.

FILGRASTIM

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FILGRASTIM	NEUPOGEN	06070		GPI-10 (8240152000)	

GUIDELINES FOR USE

1. Is the patient receiving myelosuppressive anti-cancer drugs associated with a significant incidence of severe neutropenia with fever and meets **ALL** of the following criteria?
   - The patient has a non-myeloid malignancy
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Has the patient undergone or is undergoing induction or consolidation chemotherapy treatment for acute myeloid leukemia (AML) (ICD-10 Group C92.0) and meets **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Is the patient undergoing myeloablative chemotherapy followed by bone marrow transplantation (BMT) and meets **ALL** of the following criteria?
   - The patient has a non-myeloid malignancy
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

4. Is the patient undergoing autologous peripheral blood progenitor cell collection and therapy, and meets **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #5.

FILGRASTIM

GUIDELINES FOR USE (CONTINUED)

5. Does the patient have a diagnosis of congenital neutropenia (ICD-10 D70.0), cyclic neutropenia (ICD-10 D70.4), or idiopathic neutropenia (ICD-10 D70.9), and meet **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #6.

6. Has the patient been acutely exposed to myelosuppressive doses of radiation (hematopoietic syndrome of acute radiation syndrome [H-ARS]) and meets **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

FILGRASTIM

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FILGRASTIM (Neupogen)** requires the following rule(s) be met for approval:

A. You meet ONE of the following:
   1. You are receiving myelosuppressive anti-cancer medications (medications that decrease bone marrow activity) associated with a significant incidence of severe neutropenia (a type of blood condition) with fever, and you have a non-myeloid malignancy (cancer not affecting bone marrow)
   2. You have undergone or are undergoing induction or consolidation chemotherapy (starting cancer treatment or receiving treatment following initial therapy) for acute myeloid leukemia (AML: a type of blood cancer)
   3. You are undergoing myeloablative chemotherapy (high-dose medications used to treat cancer) followed by bone marrow transplantation (procedure to get healthy blood- forming cells), and you have a non-myeloid malignancy (cancer not affecting the bone marrow)
   4. You are undergoing autologous peripheral blood progenitor cell collection and therapy (a type of blood cancer treatment)
   5. You have congenital neutropenia, cyclic neutropenia, or idiopathic neutropenia (low levels of a type of white blood cell at birth, in cycles, or due to unknown cause)
   6. You have been acutely exposed to myelosuppressive doses (doses that decrease bone marrow activity) of radiation (hematopoietic syndrome of acute radiation syndrome [H- ARS]: an illness that happens after whole body radiation)

B. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor) or oncologist (a type of cancer doctor)

C. You have tried or have a contraindication to (harmful for you to use) the preferred medication: Nivestym (filgrastim-aafi)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Neupogen.

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Has the patient undergone or is undergoing induction or consolidation chemotherapy treatment for acute myeloid leukemia (AML) (ICD-10 Group C92.0) **AND** meets the following criterion?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Is the patient undergoing myeloablative chemotherapy followed by bone marrow transplantation (BMT) and meets **ALL** of the following criteria?
   - The patient has a non-myeloid malignancy
   - Therapy is prescribed by or in consultation with a hematologist or oncologist

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

4. Is the patient undergoing autologous peripheral blood progenitor cell collection and therapy, **AND** meets the following criterion?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #5.

5. Does the patient have a diagnosis of congenital neutropenia (ICD-10 D70.0), cyclic neutropenia (ICD-10 D70.4), or idiopathic neutropenia (ICD-10 D70.9) **AND** meet the following criterion?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #6.

FILGRASTIM-AAFI

GUIDELINES FOR USE (CONTINUED)

6. Has the patient been acutely exposed to myelosuppressive doses of radiation (hematopoietic syndrome of acute radiation syndrome [H-ARS]) **AND** meets the following criterion?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FILGRASTIM-AAFI (Nivestym)** requires the following rule(s) be met for approval:
   A. You meet ONE of the following:
      1. You are receiving myelosuppressive anti-cancer medications (medications that decrease bone marrow activity) associated with a significant incidence of severe neutropenia (a type of blood condition) with fever, and you have a non-myeloid malignancy (cancer not affecting bone marrow)
      2. You have undergone or are undergoing induction or consolidation chemotherapy (starting cancer treatment or receiving treatment following initial therapy) for acute myeloid leukemia (AML: a type of blood cancer)
      3. You are undergoing myeloablative chemotherapy (high-dose medications used to treat cancer) followed by bone marrow transplantation (procedure to get healthy blood- forming cells), and you have a non-myeloid malignancy (cancer not affecting bone marrow)
      4. You are undergoing autologous peripheral blood progenitor cell collection and therapy (a type of blood cancer treatment)
      5. You have congenital neutropenia, cyclic neutropenia, or idiopathic neutropenia (low amount of a type of white blood cell at birth, in cycles or due to unknown cause)
      6. You have been acutely exposed to myelosuppressive doses (doses that decrease bone marrow activity) of radiation (hematopoietic syndrome of acute radiation syndrome [H- ARS]: an illness that happens after whole body radiation)
   B. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor) or oncologist (a type of cancer doctor)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FILGRASTIM-AYOW

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FILGRASTIM-AYOW	RELEUKO	47848		GPI-10 (8240152015)	

GUIDELINES FOR USE

1. Is the patient receiving myelosuppressive anti-cancer drugs associated with a significant incidence of severe neutropenia with fever and meets **ALL** of the following criteria?
   - The patient has a non-myeloid malignancy
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Has the patient undergone or is undergoing induction or consolidation chemotherapy treatment for acute myeloid leukemia (AML) (ICD-10 Group C92.0) and meets **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #3.

3. Is the patient undergoing myeloablative chemotherapy followed by bone marrow transplantation (BMT) and meets **ALL** of the following criteria?
   - The patient has a non-myeloid malignancy
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #4.

4. Is the patient undergoing autologous peripheral blood progenitor cell collection and therapy, and meets **ALL** of the following criteria?
   - Therapy is prescribed by or in consultation with a hematologist or oncologist
   - The patient had a trial of or contraindication to the preferred medication: Nivestym (filgrastim-aafi)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #5.

FINGOLIMOD LAURYL SULFATE	TASCENSO ODT	48165		GPI-10 (6240702520)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of a relapsing form of multiple sclerosis (MS) (ICD-10 G35), to include clinically isolated syndrome, relapsing-remitting disease, or active secondary progressive disease, and meet **ALL** of the following criteria?
   - The patient is 10 years of age or older
   - The patient has a contraindication to or is unable to swallow fingolimod oral capsules

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

2. Does the patient have **ANY** of the following contraindications to Tascenso ODT?
   - A recent (within past 6 months) occurrence of myocardial infarction, unstable angina, stroke, transient ischemic attack, decompensated heart failure requiring hospitalization, or Class III/IV heart failure
   - A history or presence of Mobitz Type II 2nd degree or 3rd degree AV block or sick sinus syndrome, unless the patient has a functioning pacemaker
   - A baseline QTc interval of at least 500 msec
   - Current treatment with Class Ia (quinidine, procainamide, or disopyramide) or Class III anti-arrhythmic drugs (amiodarone, dofetilide, dronedarone, ibutilide, or sotalol)

   If yes, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

   If no, continue to #3.

3. Is the patient 18 years of age or older?

   If yes, continue to #4.
   If no, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**

4. Has the patient had a trial of or contraindication to TWO of the following preferred agents: Zeposia (ozanimod), fingolimod (Gilenya), dimethyl fumarate (Tecfidera), Vumerity (diroximel fumarate), Mayzent (siponimod)?

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

FINGOLIMOD LAURYL SULFATE

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FINGOLIMOD LAURYL SULFATE (Tascenso ODT)** requires the following rule(s) be met for approval:

A. You have a relapsing form of multiple sclerosis (MS: a type of nerve disorder), to include clinically isolated syndrome (disease occurs once), relapsing-remitting disease (symptoms or disease returns and goes away), or active secondary progressive disease (advanced disease)
B. You are 10 years of age or older
C. You have a contraindication to (harmful for you to use) or are unable to swallow oral fingolimod oral capsules
D. You do NOT have any of the following contraindications to (harmful for you to use) Tascenso ODT:
    1. A recent (within past 6 months) occurrence of myocardial infarction (heart attack), unstable angina (chest pain), stroke, transient ischemic attack (short stroke-like attack), decompensated heart failure requiring hospitalization, or Class III/IV heart failure
    2. A history or presence of Mobitz Type II 2nd degree or 3rd degree AV block or sick sinus syndrome (types of irregular heartbeats), unless you have a functioning pacemaker (a small device that is placed [implanted] in your chest to help control your heartbeat)
    3. A baseline QTc interval of at least 500 msec (a measure of the speed of electrical conduction in the heart)
    4. Current treatment with Class Ia (quinidine, procainamide, or disopyramide) or Class III anti-arrhythmic drugs (amiodarone, dofetilide, dronedarone, ibutilide, or sotalol)
E. If you are 18 years of age or older, approval also requires:
    1. You have tried or have a contraindication to (harmful for you to use) TWO of the following preferred medications: Zeposia (ozanimod), fingolimod (Gilenya), dimethyl fumarate (Tecfidera), Vumerity (diroximel fumarate), Mayzent (siponimod)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Tascenso ODT.

FITUSIRAN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FITUSIRAN SODIUM	QFITLIA	50406		GPI-10 (8510072520)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of hemophilia A (ICD-10 Z14.0) and meet **ALL** of the following criteria?
   - The patient is 12 years of age or older
   - Qfitlia will be used for routine prophylaxis to prevent or reduce the frequency of bleeding episodes
   - Therapy is prescribed by or in consultation with a hematologist
   - Qfitlia will NOT be used concurrently with another non-factor prophylaxis therapy (e.g., Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of hemophilia B (ICD-10 D67) and meet **ALL** of the following criteria?
   - The patient is 12 years of age or older
   - Qfitlia will be used for routine prophylaxis to prevent or reduce the frequency of bleeding episodes
   - Therapy is prescribed by or in consultation with a hematologist
   - Qfitlia will NOT be used concurrently with another non-factor prophylaxis therapy (e.g., Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

FITUSIRAN

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FITUSIRAN (Qfitlia)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Hemophilia A (a type of bleeding disorder)
   2. Hemophilia B (a type of bleeding disorder)

B. If you have hemophilia A, approval also requires:
   1. You are 12 years of age or older
   2. Qfitlia will be used for routine prophylaxis to prevent or reduce the frequency of bleeding episodes
   3. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
   4. You will NOT use Qfitlia concurrently (at the same time) with another non-factor prophylaxis therapy (such as Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

C. If you have hemophilia B, approval also requires:
   1. You are 12 years of age or older
   2. Qfitlia will be used for routine prophylaxis to prevent or reduce the frequency of bleeding episodes
   3. Therapy is prescribed by or in consultation with a hematologist (a type of blood doctor)
   4. You will NOT use Qfitlia concurrently (at the same time) with another non-factor prophylaxis therapy (such as Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FITUSIRAN

RENEWAL CRITERIA

1. Does the patient have a diagnosis of hemophilia A (ICD-10 Z14.0) and meet **ALL** of the following criteria?
   - The patient has shown a clinical benefit compared to baseline
   - Qfitlia will NOT be used concurrently with another non-factor prophylaxis therapy (e.g., Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of hemophilia B (ICD-10 D67) and meet **ALL** of the following criteria?
   - The patient has shown a clinical benefit compared to baseline
   - Qfitlia will NOT be used concurrently with another non-factor prophylaxis therapy (e.g., Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FITUSIRAN (Qfitlia)** requires the following rule(s) be met for renewal:
   A. You have ONE of the following:
      1. Hemophilia A (a type of bleeding disorder)
      2. Hemophilia B (a type of bleeding disorder)

   B. If you have hemophilia A, renewal also requires:
      1. You have shown a clinical benefit compared to baseline (before starting Qfitlia)
      2. You will NOT use Qfitlia concurrently (at the same time) with another non-factor prophylaxis therapy (such as Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

   C. If you have hemophilia B, renewal also requires:
      1. You have shown a clinical benefit compared to baseline (before starting Qfitlia)
      2. You will NOT use Qfitlia concurrently (at the same time) with another non-factor prophylaxis therapy (such as Hemlibra [emicizumab-kxwh], Hympavzi [marstacimab-hncq], Alhemo [concizumab-mtci])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FLIBANSERIN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FLIBANSERIN	ADDYI	42447		GPI-10 (6217503000)	FDB: ROUTE ≠ MISCELL.

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA, SEE BELOW)

1. Is Addyi (flibanserin) a covered benefit?

   If yes, continue to #2.
   If no, guideline does not apply.

2. Does the patient have a diagnosis of acquired, generalized hypoactive sexual desire disorder (HSDD) (also referred to as female sexual interest/arousal disorder [FSIAD] per DSM-5), as defined by **ALL** of the following criteria?
   - Persistently or recurrently deficient (or absent) sexual fantasies and desire for sexual activity that has persisted for at least 6 months
   - HSDD is not a result of a co-existing medical or psychiatric condition, a problem within the relationship or the effects of a medication or drug substance
   - HSDD symptom cause marked distress or interpersonal difficulty

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

3. Does the patient meet **ALL** of the following criteria?
   - The patient is a female
   - The patient is 18 to 64 years of age
   - The patient had a previous trial of or contraindication to bupropion
   - The patient is not currently using Vyleesi (bremelanotide)

   If yes, **approve for 8 weeks by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

FLIBANSERIN

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FLIBANSERIN (Addyi)** requires the following rule(s) be met for approval:

A. You have acquired, generalized hypoactive sexual desire disorder (HSDD; lack or absence of sexual desire). This is also referred to as female sexual interest/arousal disorder per DSM-5 (a diagnostic tool for mental disorders), as defined by ALL of the following criteria:
   1. Persistently or recurrently deficient (or absent) sexual fantasies and desire for sexual activity that has persisted for at least 6 months
   2. Hypoactive sexual desire disorder is not a result of a co-existing medical or psychiatric condition, a problem within the relationship or the effects of a medication or drug substance
   3. Hypoactive sexual desire disorder symptom causes marked distress or interpersonal difficulty
B. You are a female
C. You are 18 to 64 years of age
D. You previously had a trial of bupropion, unless there is a medical reason why you cannot (contraindication)
E. You are not currently using Vyleesi (bremelanotide)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FLIBANSERIN

RENEWAL CRITERIA

1. Does the patient have a diagnosis of acquired, generalized hypoactive sexual desire disorder (HSDD) (also referred to as female sexual interest/arousal disorder [FSIAD] per DSM-5), as defined by **ALL** of the following criteria?
   - Persistently or recurrently deficient (or absent) sexual fantasies and desire for sexual activity that has persisted for at least 6 months
   - HSDD is not a result of a co-existing medical or psychiatric condition, a problem within the relationship or the effects of a medication or drug substance
   - HSDD symptoms cause marked distress or interpersonal difficulty

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Does the patient meet **ALL** of the following criteria?
   - The patient is a female
   - The patient is not currently using Vyleesi
   - The patient has demonstrated continued improvement in symptoms of HSDD/FSIAD (e.g., increased sexual desire, lessened distress)?

   If yes, **approve for 6 months by HICL or GPI-10 with a quantity limit of #1 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline for **FLIBANSERIN (Addyi)** requires the following rule(s) be met for renewal:
   A. You have acquired, generalized hypoactive sexual desire disorder (HSDD; lack or absence of sexual desire). This is also referred to as female sexual interest/arousal disorder per DSM-5 (a diagnostic tool for mental disorders), as defined by **ALL** of the following criteria:
      1. Persistently or recurrently deficient (or absent) sexual fantasies and desire for sexual activity that has persisted for at least 6 months
      2. Hypoactive sexual desire disorder is not a result of a co-existing medical or psychiatric condition, a problem within the relationship or the effects of a medication or drug substance
      3. Hypoactive sexual desire disorder symptom causes marked distress or interpersonal difficulty

FOSCARBIDOPA-FOSLEVODOPA

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FOSCARBIDOPA/ FOSLEVODOPA	VYALEV	49183		GPI-10 (7320990213)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of advanced Parkinson's disease (PD) (ICD-10 Group G20) and meet **ALL** of the following criteria?
   - Vyalev is being used for the treatment of motor fluctuations associated with Parkinson's disease
   - Therapy is prescribed by or in consultation with a neurologist
   - The patient's disease is responsive to treatment with levodopa
   - The patient is currently being treated with at least 400mg of levodopa per day
   - The patient has motor symptoms that are currently uncontrolled (defined as an average 'off' time of at least 2.5 hours per day over 3 consecutive days, with a minimum of 2 hours each day)

   If yes, continue to #2.

   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient is unable to swallow extended-release tablets or administer extended-release capsules via a feeding tube
   - The patient has failed to adhere to an oral carbidopa/levodopa regimen or tolerate a carbidopa/levodopa regimen via a feeding tube

   If yes, **approve for 3 months by HICL or GPI-10 with a quantity limit of #20mL per day.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

FOSCARBIDOPA-FOSLEVODOPA

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FOSCARBIDOPA-FOSLEVODOPA (Vyalev)** requires the following rule(s) be met for approval:

A. You have advanced Parkinson's disease (PD: a type of movement disorder)
B. Vyalev will be used for the treatment of motor fluctuations (changes in the ability to move) associated with Parkinson's disease
C. Therapy is prescribed by or in consultation with a neurologist (a type of brain and nervous system doctor)
D. Your disease is responsive to treatment with levodopa
E. You are currently being treated with at least 400mg of levodopa per day
F. Your motor symptoms are currently uncontrolled (defined as an average 'off' time of at least 2.5 hours per day over 3 consecutive days, with a minimum of 2 hours each day)
G. You meet ONE of the following:
    1. You are unable to swallow extended-release tablets or administer extended-release capsules through a feeding tube
    2. You have failed to adhere to (keep up with) an oral carbidopa/levodopa regimen or tolerate a carbidopa/levodopa regimen through a feeding tube

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FOSTAMATINIB DISODIUM	TAVALISSE	44895		GPI-10 (8575604010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of chronic immune thrombocytopenia (cITP) (ICD-10 D69.3) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient had a trial of or contraindication to corticosteroids or immunoglobulins, OR had an insufficient response to a splenectomy
   - The patient has a platelet count of less than 30 x 10^9/L, OR has a platelet count of less than 50 x 10^9/L and a prior bleeding event
   - Tavalisse will NOT be used concurrently with a Bruton's tyrosine kinase (BTK) inhibitor (e.g., Wayrilz [rilzabrutinib]) for the treatment of cITP

   If yes, **approve for 3 months by HICL or GPI-10 with a quantity limit of #2 per day.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FOSTAMATINIB (Tavalisse)** requires the following rule(s) be met for approval:
   A. You have chronic immune thrombocytopenia (cITP: a type of blood disorder)
   B. You are 18 years of age or older
   C. You have tried or have a contraindication to (harmful for you to use) corticosteroids or immunoglobulins, OR you did not have a good enough response to a splenectomy (spleen removal)
   D. You have a platelet (a type of blood cell) count of less than 30 x 10^9/L, OR you have a platelet count of less than 50 x 10^9/L AND had a prior bleeding event
   E. You will NOT use Tavalisse concurrently (at the same time) with a Bruton's tyrosine kinase (BTK) inhibitor (such as Wayrilz [rilzabrutinib]) for the treatment of chronic immune thrombocytopenia

RENEWAL CRITERIA

1. Does the patient have a diagnosis of chronic immune thrombocytopenia (cITP) (ICD-10 D69.3) and meet **ALL** of the following criteria?
   - The patient has shown a clinical response to therapy, defined as having an improvement in platelet count from baseline OR a reduction in bleeding events
   - Tavalisse will NOT be used concurrently with a Bruton's tyrosine kinase (BTK) inhibitor (e.g., Wayrilz [rilzabrutinib]) for the treatment of cITP

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FOSTAMATINIB (Tavalisse)** requires the following rule(s) be met for renewal:
   A. You have chronic immune thrombocytopenia (cITP: a type of blood disorder)
   B. You have shown a clinical response to therapy, defined as having an improvement in platelet (a type of blood cell) count from baseline (before starting Tavalisse) OR a decrease in bleeding events
   C. You will NOT use Tavalisse concurrently (at the same time) with a Bruton's tyrosine kinase (BTK) inhibitor (such as Wayrilz [rilzabrutinib]) for the treatment of chronic immune thrombocytopenia

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Tavalisse.

GUIDELINES FOR USE

1. Does the patient have a diagnosis of human immunodeficiency virus type 1 (HIV-1) infection (ICD-10 B20) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Rukobia will be used in combination with other antiretroviral(s)
   - The patient is treatment-experienced
   - The patient's HIV-1 infection is multidrug-resistant
   - The patient is failing their current antiretroviral regimen due to resistance, intolerance, or safety considerations

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #2 per day.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FOSTEMSAVIR (Rukobia)** requires the following rule(s) be met for approval:
   A. You have human immunodeficiency virus type 1 (HIV-1) infection (an immune system disease caused by a virus)
   B. You are 18 years of age or older
   C. Rukobia will be used in combination with other antiretroviral(s) (medications that treat HIV)
   D. You are treatment-experienced (previously treated)
   E. Your HIV-1 infection is multidrug-resistant (does not respond to more than one HIV medication)
   F. You are failing your current antiretroviral regimen due to resistance (does not respond), intolerance (side effect), or safety considerations

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Rukobia.

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FREMANEZUMAB-VFRM	AJOVY	45236		GPI-10 (6770203020)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of episodic migraines and meet **ALL** of the following criteria?
   - The patient is 6 years of age or older
   - Ajovy is prescribed for the preventive treatment of migraines
   - Ajovy will NOT be used concurrently with other CGRP inhibitors (e.g., Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine prevention

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, continue to #2.

2. Does the patient have a diagnosis of chronic migraines (ICD-10 Group G43.7, G43.E) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Ajovy is prescribed for the preventive treatment of migraines
   - Ajovy will NOT be used concurrently with other CGRP inhibitors (e.g., Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine prevention

   If yes, **approve for 6 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the initial denial text at the end of the guideline.

FREMANEZUMAB-VFRM

INITIAL CRITERIA (CONTINUED)

INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FREMANEZUMAB-VFRM (Ajovy)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Episodic migraines (a type of headache)
   2. Chronic migraines (a type of headache)

B. If you have episodic migraines (0-14 headache days per month), approval also requires:
   1. You are 6 years of age or older
   2. Ajovy is prescribed for the preventive treatment of migraines (a type of headache)
   3. You will NOT use Ajovy concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine (a type of headache) prevention

C. If you have chronic migraines (at least 15 headache days per month), approval also requires:
   1. You are 18 years of age or older
   2. Ajovy is prescribed for the preventive treatment of migraines (a type of headache)
   3. You will NOT use Ajovy concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine (a type of headache) prevention

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FREMANEZUMAB-VFRM

RENEWAL CRITERIA

1. Is the request for the preventive treatment of migraines **AND** the patient meets the following criterion?
   - Ajovy will NOT be used concurrently with other CGRP inhibitors (e.g., Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine prevention

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has experienced a reduction in migraine or headache frequency of at least 2 days per month with Ajovy therapy
   - The patient has experienced a reduction in migraine severity with Ajovy therapy
   - The patient has experienced a reduction in migraine duration with Ajovy therapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FREMANEZUMAB-VFRM (Ajovy)** requires the following rule(s) be met for renewal:
   A. The request is for the preventive treatment of migraines (a type of headache)
   B. You will NOT use Ajovy concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Aimovig [erenumab-aooe], Emgality [galcanezumab-gnlm], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant], Qulipta [atogepant]) for migraine (a type of headache) prevention
   C. You meet ONE of the following:
      1. You have experienced a decrease in migraine (a type of headache) or headache frequency of at least 2 days per month with Ajovy therapy
      2. You have experienced a decrease in migraine (a type of headache) severity with Ajovy therapy
      3. You have experienced a decrease in migraine (a type of headache) duration with Ajovy therapy

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FRUQUINTINIB

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FRUQUINTINIB	FRUZAQLA	47169		GPI-10 (2133503500)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of metastatic colorectal cancer (mCRC) (ICD-10 C19) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has received previous treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy (e.g., FOLFOX, FOLFIRI, CapeOx)
   - The patient has received previous treatment with an anti-VEGF therapy (e.g., Zaltrap [ziv-aflibercept], Cyramza [ramucirumab])

   If yes, **approve the requested strength for 12 months by GPID or GPI-14 with the following quantity limits:**
   - **1mg: #84 per 28 days.**
   - **5mg: #21 per 28 days.**

   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FRUQUINTINIB (Fruzaqla)** requires the following rule(s) be met for approval:
   A. You have metastatic colorectal cancer (mCRC: a type of digestive system cancer that has spread to other parts of the body)
   B. You are 18 years of age or older
   C. You have received previous treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy (such as FOLFOX, FOLFIRI, CapeOx)
   D. You have received previous treatment with an anti- vascular endothelial growth factor (VEGF) therapy (a type of treatment such as Zaltrap [ziv-aflibercept], Cyramza [ramucirumab])

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

FULVESTRANT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FULVESTRANT	FASLODEX FULVESTRANT	23523		GPI-10 (2140353000)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of breast cancer (ICD-10 Group C50)?

   If yes, continue to #2.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

2. Is the patient's cancer hormone receptor (HR)-positive and the patient meets **ALL** of the following criteria?
   - The patient's cancer is advanced
   - The patient is a female and postmenopausal
   - The requested medication will be used as monotherapy
   - The patient has experienced disease progression following an endocrine therapy (e.g., letrozole, anastrozole, tamoxifen)

   If yes, **approve for a total of 12 months by HICL or GPI-10. Enter two authorizations as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #30mL per 30 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #10mL per 30 days (please enter a start date of THREE WEEKS AFTER the end date of the first approval).**

   If no, continue to #3.

3. Is the patient's cancer HR-positive **AND** human epidermal growth factor receptor 2 (HER2)-negative?

   If yes, continue to #4.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

FULVESTRANT

GUIDELINES FOR USE (CONTINUED)

4. Will the requested medication be used as monotherapy and the patient meets **ALL** of the following criteria?
   - The patient's cancer is advanced
   - The patient is a female and postmenopausal
   - The patient has NOT been previously treated with an endocrine therapy (e.g., letrozole, anastrozole, tamoxifen)

   If yes, **approve for a total of 12 months by HICL or GPI-10. Enter two authorizations as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #30mL per 30 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #10mL per 30 days (please enter a start date of THREE WEEKS AFTER the end date of the first approval).**

   If no, continue to #5.

5. Will the requested medication be used in combination with Kisqali (ribociclib) and the patient meets **ALL** of the following criteria?
   - The patient's cancer is advanced or metastatic
   - The patient is a female and postmenopausal
   - The patient has NOT received a prior endocrine based therapy (e.g., letrozole, anastrozole, tamoxifen) OR the patient has experienced disease progression on endocrine therapy

   If yes, **approve for a total of 12 months by HICL or GPI-10. Enter two authorizations as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #30mL per 30 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #10mL per 30 days (please enter a start date of THREE WEEKS AFTER the end date of the first approval).**

   If no, continue to #6.

FULVESTRANT

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **FULVESTRANT (Faslodex)** requires the following rule(s) be met for approval:

A. You have breast cancer

B. If you have hormone receptor (HR: a type of protein)-positive breast cancer, approval also requires:
1. Your cancer is advanced
2. You are a female and postmenopausal (after menopause)
3. The requested medication will be used as monotherapy (one medication treatment)
4. You have experienced disease progression (worsening) following endocrine (hormone) therapy (such as letrozole, anastrozole, tamoxifen)

C. If you have hormone receptor (HR: a type of protein)-positive, human epidermal growth factor receptor 2 (HER2: a type of protein)-negative breast cancer, approval also requires ONE of the following:
1. The requested medication will be used as monotherapy (one medication treatment) and you meet ALL of the following:
   a. Your cancer is advanced
   b. You are a female and postmenopausal (after menopause)
   c. You have NOT previously been treated with an endocrine (hormone) therapy (such as letrozole, anastrozole, tamoxifen)
2. The requested medication will be used in combination with Kisqali (ribociclib) and you meet ALL of the following:
   a. Your cancer is advanced or metastatic (has spread to other parts of the body)
   b. You are a female and postmenopausal
   c. You have NOT received a prior endocrine based therapy (such as letrozole, anastrozole, tamoxifen) OR you have experienced disease progression (worsening) on endocrine therapy
3. The requested medication will be used in combination with Itovebi (inavolisib) and Ibrance (palbociclib) and you meet ALL of the following:
   a. Your cancer is locally advanced or metastatic (cancer that has spread from where it started to nearby tissue or lymph nodes or to other parts of the body)
   b. Your tumor has a PIK3CA mutation (abnormal change in a type of gene), as detected by a Food and Drug Administration (FDA)-approved test
   c. You have experienced disease recurrence (disease has returned) on or after completing adjuvant (add-on) endocrine (hormone) therapy (such as letrozole, anastrozole, tamoxifen)

(Denial text continued on the next page)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
FUTIBATINIB	LYTGOBI	48369		GPI-10 (2153222800)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of unresectable, locally advanced or metastatic intrahepatic cholangiocarcinoma (iCCA) (ICD-10 C22.1) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has been previously treated for unresectable, locally advanced or metastatic iCCA
   - The patient has fibroblast growth factor receptor 2 (FGFR2) gene fusions or other rearrangements
   - The patient will complete a comprehensive ophthalmological examination, including optical coherence tomography (OCT), prior to the initiation of Lytgobi and at the recommended scheduled intervals

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #5 per day.**
   If no, do not approve.

   DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **FUTIBATINIB (Lytgobi)** requires the following rule(s) be met for approval:
   A. You have unresectable, locally advanced or metastatic intrahepatic cholangiocarcinoma (iCCA) (a type of bile duct cancer inside the liver that is unable to be removed by surgery, has spread from where it started to nearby tissue/lymph nodes or to other parts of the body)
   B. You are 18 years of age or older
   C. You have been previously treated for unresectable, locally advanced or metastatic iCCA
   D. You have fibroblast growth factor receptor 2 (FGFR2: a type of protein) gene fusions or other rearrangements
   E. You will complete a comprehensive ophthalmological examination (eye exam), including optical coherence tomography (OCT: a type of eye imaging test), before starting Lytgobi and at the recommended scheduled times

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GALCANEZUMAB-GNLM

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
GALCANEZUMAB-GNLM	EMGALITY	45281		GPI-10 (6770203530)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of episodic migraines and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Emgality is prescribed for the preventive treatment of migraines
   - Emgality will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine prevention

   If yes, **approve for 6 months by HICL or GPI-10.**
   (PAC Note: In addition, enter a one-time proactive PA for 120mg/mL strength by GPID or GPI-14 for 1 month with a quantity limit of #2mL per 30 days. Please override the quantity limit coded on the formulary by selecting the "QL Only" override.)

   If no, continue to #2.

2. Does the patient have a diagnosis of chronic migraines (ICD-10 Groups G43.7, G43.E) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - Emgality is prescribed for the preventive treatment of migraines
   - Emgality will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine prevention

   If yes, **approve for 6 months by HICL or GPI-10.**
   (PAC Note: In addition, enter a one-time proactive PA for 120mg/mL strength by GPID or GPI-14 for 1 month with a quantity limit of #2mL per 30 days. Please override the quantity limit coded on the formulary by selecting the "QL Only" override.)

   If no, continue to #3.

GALCANEZUMAB-GNLM

INITIAL CRITERIA (CONTINUED)

3. Is the request for the treatment of episodic cluster headache (ICD-10 Group G44.01) and the patient meets **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient's symptoms were NOT adequately managed with abortive therapies (e.g., Imitrex [sumatriptan], Zomig [zolmitriptan], oxygen)

   If yes, **approve for 3 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **GALCANEZUMAB-GNLM (Emgality)** requires the following rule(s) be met for approval:
   A. You have ONE of the following:
      1. Episodic migraines (a type of headache)
      2. Chronic migraines (a type of headache)
      3. Episodic cluster headaches (a type of headache)

   B. If you have episodic migraines (0-14 headache days per month), approval also requires:
      1. You are 18 years of age or older
      2. Emgality is prescribed for the preventive treatment of migraines (a type of headache)
      3. You will NOT use Emgality concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine (a type of headache) prevention

   (Initial denial text continued on next page)

GALCANEZUMAB-GNLM

INITIAL CRITERIA (CONTINUED)

C. If you have chronic migraines (15 or more headache days per month), approval also requires:
1. You are 18 years of age or older
2. Emgality is prescribed for the preventive treatment of migraines (a type of headache)
3. You will NOT use Emgality concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine (a type of headache) prevention

D. If you have episodic cluster headaches, approval also requires:
1. You are 18 years of age or older
2. Your symptoms were not adequately managed with abortive therapies (such as Imitrex [sumatriptan], Zomig [zolmitriptan], oxygen)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GALCANEZUMAB-GNLM

RENEWAL CRITERIA

1. Is the request for the preventive treatment of migraines **AND** the patient meets the following criterion?
   - Emgality will NOT be used concurrently with other CGRP inhibitors (e.g., Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine prevention

   If yes, continue to #2.
   If no, continue to #3.

2. Does the patient meet **ONE** of the following criteria?
   - The patient has experienced a reduction in migraine or headache frequency of at least 2 days per month with Emgality therapy
   - The patient has experienced a reduction in migraine severity with Emgality therapy
   - The patient has experienced a reduction in migraine duration with Emgality therapy

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the renewal denial text at the end of the guideline.

3. Is the request for the treatment of episodic cluster headache (ICD-10 Group G44.01) **AND** the patient meets the following criterion?
   - The patient had improvement in episodic cluster headache frequency as compared to baseline

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **GALCANEZUMAB-GNLM (Emgality)** requires the following rule(s) be met for renewal:
   A. The request is for ONE of the following:
      1. Preventive treatment of migraines (a type of headache)
      2. Treatment of episodic cluster headache (a type of headache)

   (Renewal denial text continued on next page)

CONTINUED ON NEXT PAGE

Copyright © 2026 MedImpact Healthcare Systems, Inc. All rights reserved. This document is proprietary to MedImpact. MedImpact maintains the sole and exclusive ownership, right, title, and interest in and to this document.

RENEWAL CRITERIA (CONTINUED)

B. If the request is for preventive treatment of migraines, renewal also requires:
1. You will NOT use Emgality concurrently (at the same time) with other calcitonin gene-related peptide (CGRP) inhibitors (such as Ajovy [fremanezumab-vfrm], Aimovig [erenumab-aooe], Vyepti [eptinezumab-jjmr], Nurtec ODT [rimegepant orally disintegrating tablet], Qulipta [atogepant]) for migraine (a type of headache) prevention
2. You meet ONE of the following:
   a. You have experienced a decrease in migraine (a type of headache) or headache frequency of at least 2 days per month with Emgality therapy
   b. You have experienced a decrease in migraine (a type of headache) severity with Emgality therapy
   c. You have experienced a decrease in migraine (a type of headache) duration with Emgality therapy

C. If the request is for treatment of episodic cluster headaches, renewal also requires:
1. You had improvement in episodic cluster headache frequency as compared to baseline (before treatment)

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE
For further information, please refer to the Prescribing information and/or Drug Monograph for Emgality.

GARADACIMAB-GXII

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
GARADACIMAB-GXII	ANDEMBRY	50645		GPI-10 (8583203001)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of hereditary angioedema (HAE) (ICD-10 D84.1) and meet **ALL** of the following criteria?
- The patient is 12 years of age or older
- Andembry will be used for prophylaxis against HAE attacks
- Therapy is prescribed by or in consultation with an allergist, immunologist, hematologist, or pulmonologist
- Andembry will NOT be used concurrently with an alternative prophylactic agent for HAE attacks (e.g., Cinryze [C1 esterase inhibitor], Haegarda [C1 esterase inhibitor], danazol, Orladeyo [berotralstat], Takhzyro [lanadelumab-flyo], Dawnzera [donidalorsen])

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the initial denial text at the end of the guideline.

2. Does the patient have Type I or II HAE **AND** meet the following criterion?
- The diagnosis is confirmed by ONE of the following complement tests: C1-INH protein levels, C4 protein levels, C1-INH functional levels, C1q

If yes, **approve for a total of 12 months by HICL or GPI-10 as follows:**
- **FIRST APPROVAL: Approve for 1 month with a quantity limit of #2.4mL per 30 days.**
- **SECOND APPROVAL: Approve for 11 months with a quantity limit of #1.2mL per 30 days (Please enter a start date of 23 days AFTER the start date of the first approval).**

If no, continue to #3.

GARADACIMAB-GXII

INITIAL CRITERIA (CONTINUED)

3. Does the patient have HAE-nC1INH (Type III HAE) as confirmed by **ALL** of the following criteria?
   - The patient has recurrent, non-urticarial angioedema involving the skin, gastrointestinal tract, or airway, consistent with bradykinin-mediated HAE AND the attacks cannot be explained by histaminergic/urticarial angioedema
   - Other causes of angioedema have been excluded, including ACE-inhibitor/ARB-associated angioedema, acquired C1-INH deficiency, and mast-cell/histaminergic angioedema

   If yes, **approve for a total of 12 months by HICL or GPI-10 as follows:**
   - **FIRST APPROVAL: Approve for 1 month with a quantity limit of #2.4mL per 30 days.**
   - **SECOND APPROVAL: Approve for 11 months with a quantity limit of #1.2mL per 30 days (Please enter a start date of 23 days AFTER the start date of the first approval).**

   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **GARADACIMAB-GXII (Andembry)** requires the following rule(s) be met for approval:
   A. You have hereditary angioedema (HAE: a type of gene condition with severe body swelling)
   B. You are 12 years of age or older
   C. Andembry will be used for the prevention of hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks
   D. Therapy is prescribed by or in consultation with an allergist (a type of allergy doctor), immunologist (a type of immune system doctor), hematologist (a type of blood doctor), or pulmonologist (lung/breathing doctor)
   E. You will NOT use Andembry concurrently (at the same time) with an alternative preventive medication for hereditary angioedema (HAE: a type of gene condition with severe body swelling) attacks (such as Cinryze [C1 esterase inhibitor], Haegarda [C1 esterase inhibitor], danazol, Orladeyo [berotralstat], Takhzyro [lanadelumab-flyo], Dawnzera [donidalorsen])

GEPIRONE

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
GEPIRONE HCL	EXXUA	49298		GPI-10 (5812003010)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of major depressive disorder (MDD) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient had a trial of or contraindication to BOTH of the following preferred agents: Fetzima (levomilnacipran) and Trintellix (vortioxetine)
   - Exxua will NOT be used concurrently with another 5-HT1A receptor agonist (e.g., buspirone)

   If yes, **approve for 3 months by HICL or GPI-10.**
   If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **GEPIRONE (Exxua)** requires the following rule(s) be met for approval:
   A. You have major depressive disorder (MDD: a type of mental illness)
   B. You are 18 years of age or older
   C. You have tried or have a contraindication to (harmful for you to use) BOTH of the following preferred medications: Fetzima (levomilnacipran) and Trintellix (vortioxetine)
   D. You will NOT use Exxua concurrently (at the same time) with another 5-HT1A receptor agonist (such as buspirone)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GEPIRONE

RENEWAL CRITERIA

1. Does the patient have a diagnosis of major depressive disorder (MDD) and meet **ALL** of the following criteria?
   - The patient has had a response to or remission of depressive symptoms with Exxua
   - Exxua will NOT be used concurrently with another 5-HT1A receptor agonist (e.g., buspirone)

   If yes, **approve for 12 months by HICL or GPI-10.**
   If no, do not approve.

   RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **GEPIRONE (Exxua)** requires the following rule(s) be met for renewal:
   A. You have major depressive disorder (MDD: a type of mental illness)
   B. You have had a response to or remission (reduction or disappearance of the signs and symptoms of a disease) of depressive symptoms with Exxua
   C. You will NOT use Exxua concurrently (at the same time) with another 5-HT1A receptor agonist (such as buspirone)

   This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

RATIONALE

For further information, please refer to the Prescribing Information and/or Drug Monograph for Exxua.

GEPOTIDACIN

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
GEPOTIDACIN MESYLATE	BLUJEPA	50388		GPI-10 (1680001620)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of uncomplicated urinary tract infection (uUTI) (ICD-10 N39.0) and meet **ALL** of the following criteria?
   - The patient is a female
   - The patient is 12 years of age or older
   - The patient's infection is caused by susceptible *Escherichia coli, Klebsiella pneumoniae, Citrobacter freundii complex, Staphylococcus saprophyticus, or Enterococcus faecalis*

   If yes, continue to #2.
   If no, continue to #3.

2. Does the patient meet **ONE** of the following criteria?
   - Therapy is prescribed by or in consultation with an infectious disease (ID) specialist
   - The patient has a documented culture demonstrating uUTI is caused by a bacteria with sensitivity to gepotidacin AND resistance or contraindication to all alternatives (e.g. Pivya [pivmecillinam], trimethoprim-sulfamethoxazole [TMP-SMX], nitrofurantoin, fosfomycin, penicillins [e.g., amoxicillin-clavulanate], cephalosporins [e.g., cephalexin], fluoroquinolones [e.g., ciprofloxacin])
   - The request is for continuation of Blujepa therapy from an inpatient setting

   If yes, **approve for 5 days by HICL or GPI-10.**
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Does the patient have a diagnosis of uncomplicated urogenital gonorrhea (ICD-10 Group A54.0) and meet **ALL** of the following criteria?
   - The patient is 12 years of age or older
   - The patient's infection has limited or no alternative treatment options
   - The patient's infection is caused by a susceptible strain of *Neisseria gonorrhoeae*
   - The patient had a trial of or contraindication to the clinical standard of care agent: ceftriaxone

   If yes, **approve for 1 month by HICL or GPI-10 with a quantity limit of #8 for 1 fill (PAC Note: Please override the quantity limit coded on the formulary by selecting the "QL Only" override).**

   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

GEPOTIDACIN

GUIDELINES FOR USE (CONTINUED)

DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **GEPOTIDACIN (Blujepa)** requires the following rule(s) be met for approval:

A. You have ONE of the following:
   1. Uncomplicated urinary tract infection (uUTI: a type of bacterial infection)
   2. Uncomplicated urogenital gonorrhea (a type of bacterial infection)

B. If you have uncomplicated urinary tract infection, approval also requires:
   1. You are a female
   2. You are 12 years of age or older
   3. Your uncomplicated urinary tract infection (a type of bacterial infection) is caused by susceptible *Escherichia coli, Klebsiella pneumoniae, Citrobacter freundii complex, Staphylococcus saprophyticus, or Enterococcus faecalis* (types of bacteria that can be treated with the medication)
   4. You meet ONE of the following:
      a. Therapy is prescribed by or in consultation with an infectious disease specialist (a doctor who specializes in the treatment of infections)
      b. You have a documented culture demonstrating uncomplicated urinary tract infection (a type of bacterial infection is caused by a bacteria with sensitivity (lab test that shows what medications work on which bacteria) to gepotidacin AND resistance (medication will not work for that bacteria) or contraindication to (harmful for you to use) all alternatives (such as Pivya [pivmecillinam], trimethoprim-sulfamethoxazole [TMP-SMX], nitrofurantoin, fosfomycin, penicillins [such as amoxicillin-clavulanate]], cephalosporins [such as cephalexin], fluoroquinolones [such as ciprofloxacin])
      c. Your request is for continuation of Blujepa therapy from an inpatient setting

C. If you have uncomplicated urogenital gonorrhea, approval also requires:
   1. You are 12 years of age or older
   2. Your infection has limited or no alternative treatment options
   3. Your infection is caused by a susceptible strain of *Neisseria gonorrhoeae*
   4. You have tried or have a contraindication to (harmful for you to use) the clinical standard of care medication: ceftriaxone

This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GIVINOSTAT

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
GIVINOSTAT HYDROCHLORIDE	DUVYZAT	49667		GPI-10 (7460302520)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of Duchenne muscular dystrophy (DMD) (ICD-10 G71.01) and meet **ALL** of the following criteria?
   - The patient is 6 years of age or older
   - Therapy is prescribed by or in consultation with a neurologist specializing in the treatment of Duchenne muscular dystrophy (DMD) at a DMD treatment center
   - The patient's diagnosis of DMD is confirmed by genetic testing
   - The patient has been on a stable dose of corticosteroids for at least 6 months AND will continue steroid therapy with Duvyzat

   If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #12mL per day.** If no, do not approve.

   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **GIVINOSTAT (Duvyzat)** requires the following rule(s) be met for approval:
   A. You have Duchenne muscular dystrophy (DMD: a type of muscle disorder)
   B. You are 6 years of age or older
   C. Therapy is prescribed by or in consultation with a neurologist (nerve system doctor) specializing in the treatment of Duchenne muscular dystrophy (DMD) at a DMD treatment center
   D. Your diagnosis of DMD is confirmed by genetic testing
   E. You have been on a stable dose of corticosteroids for at least 6 months AND will continue steroid therapy with Duvyzat

   Your doctor told us [INSERT PT SPECIFIC INFO PROVIDED]. We do not have information showing you [INSERT UNMET CRITERIA]. This is why your request is denied. Please work with your doctor to use a different medication or get us more information if it will allow us to approve this request.

GIVINOSTAT

RENEWAL CRITERIA

1. Does the patient have a diagnosis of Duchenne muscular dystrophy (DMD) (ICD-10 G71.01) **AND** meet the following criterion?
- The patient has been on a stable dose of corticosteroids for at least 6 months AND will continue steroid therapy with Duvyzat

If yes, continue to #2.
If no, do not approve.
DENIAL TEXT: See the renewal denial text at the end of the guideline.

2. Is the patient currently ambulatory **AND** meets the following criterion?
- The patient has shown improvement since starting Duvyzat, as assessed by a standard set of ambulatory or functional status measures (e.g., 6-minute walking distance [6MWD], ascending or descending 4 stairs, rise from floor time [Gower's maneuver], 10-meter [30 feet] run/walk time, North Star Ambulatory Assessment [NSAA])

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #12mL per day.**
If no, continue to #3.

3. Is the patient currently non-ambulatory **AND** meets the following criterion?
- The patient has maintained or demonstrated a less than expected decline in pulmonary function or upper limb strength since starting Duvyzat, as assessed by standard measures (e.g., pulmonary function [FVC, PFTs], upper limb strength)

If yes, **approve for 12 months by HICL or GPI-10 with a quantity limit of #12mL per day.**
If no, do not approve.

RENEWAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

Our guideline named **GIVINOSTAT (Duvyzat)** requires the following rule(s) be met for renewal:
A. You have Duchenne muscular dystrophy (DMD: a type of muscle disorder)
B. You have been on a stable dose of corticosteroids for at least 6 months AND will continue steroid therapy with Duvyzat
C. If you are currently ambulatory (can walk), approval also requires:
1. You have shown improvement since starting Duvyzat, as measured by a standard set of ambulatory or functional status measures (such as 6-minute walking distance [6MWD], going up or down 4 stairs, time to rise from the floor [Gower's maneuver], 10-meter [30 feet] run/walk time, North Star Ambulatory Assessment [NSAA: a tool for evaluating Duchenne muscular dystrophy])

GIVOSIRAN (NSA)

Generic	Brand	HICL	GCN	Medi-Span	Exception/Other
GIVOSIRAN	GIVLAARI	46222		GPI-10 (8508002520)	

GUIDELINES FOR USE

INITIAL CRITERIA (NOTE: FOR RENEWAL CRITERIA SEE BELOW)

1. Does the patient have a diagnosis of acute hepatic porphyria (AHP) (to include acute intermittent porphyria [AIP], variegate porphyria [VP], hereditary coproporphyria [HCP], ALA dehydratase- deficient porphyria [ADP/ALAD]) and meet **ALL** of the following criteria?
   - The patient is 18 years of age or older
   - The patient has genetic confirmation of AHP mutation OR elevated (beyond reference range) urinary or plasma PBG (porphobilinogen) or ALA (aminolevulinic acid)
   - The patient has or is experiencing 4 or more recurrent attacks per year
   - The requested medication is prescribed by or given in consultation with a geneticist, hepatologist, hematologist, gastroenterologist, neurologist, dermatologist, or a healthcare provider experienced in managing AHP
   - Documentation of patient's current weight (to the nearest 0.1 kg)

   If yes, **approve for 6 months by HICL or GPI-10 at a dose of 2.5 mg/kg actual body weight as follows:**
   - **Weight ≤ 75.6 kg: #1mL (1 vial) per month.**
   - **Weight 75.7 kg to 151.2 kg: #2mL (2 vials) per month.**
   - **Weight 151.3 to 226.8 kg: #3mL (3 vials) per month (and so forth).**

   APPROVAL TEXT: Renewal requires: 1) patient has achieved or maintained clinical benefit compared to baseline, 2) patient has not received a liver transplant, and 3) documentation of patient's current weight.

   If no, do not approve.
   INITIAL DENIAL TEXT: *Some terms are already pre-defined in parenthesis. Please use these definitions if the particular text you need to use does not already have definition(s) in it.

   Our guideline named **GIVOSIRAN (Givlaari)** requires the following rule(s) be met for approval:
   A. You have acute hepatic porphyria (enzyme deficiency which leads to buildup of materials in the liver) (to include acute intermittent porphyria [AIP], variegate porphyria [VP], hereditary coproporphyria [HCP], ALA dehydratase-deficient porphyria [ADP/ALAD])
   B. You are 18 years of age or older
   C. You have genetic confirmation of AHP mutation (a change in your DNA that make up your gene), OR high (beyond reference range) urinary or plasma porphobilinogen (PBG), or aminolevulinic acid (ALA) (PBG and ALA: urine or blood tests that measure the level of porphyrins – a chemical that helps make hemoglobin in your body)

GLECAPREVIR/ PIBRENTASVIR	MAVYRET	44453		GPI-10 (1235990235)	

GUIDELINES FOR USE

1. Does the patient have a diagnosis of acute hepatitis C virus (HCV) (ICD-10 B17.1) and meet **ALL** of the following criteria?
   - The patient is 3 years of age or older
   - The patient has genotype 1, 2, 3, 4, 5, or 6 infection

   If yes, continue to #2.
   If no, continue to #4.

2. Does the patient have an HCV RNA level within the past 6 months?

   If yes, continue to #3.
   If no, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

3. Does the patient meet **ANY** of the following criteria?
   - The patient has a limited life expectancy (less than 12 months) due to non-liver related comorbid conditions
   - The patient has moderate or severe hepatic impairment (decompensated cirrhosis; Child-Pugh B or C)
   - Mavyret will be used concurrently with any medication with drug interactions that are contraindicated or not recommended per the prescribing information (e.g., rifampin, atazanavir, carbamazepine, phenytoin, efavirenz, darunavir, lopinavir, ritonavir, atorvastatin, lovastatin, simvastatin, rosuvastatin at doses greater than 10mg, cyclosporine at doses greater than 100mg/day, medications containing more than 20mcg of ethinyl estradiol, St. John's wort)
   - Mavyret will be used concurrently with Epclusa (velpatasvir/sofosbuvir), Harvoni (ledipasvir/sofosbuvir), Vosevi (velpatasvir/sofosbuvir/voxilaprevir), or Zepatier (elbasvir/grazoprevir)

   If yes, do not approve.
   DENIAL TEXT: See the denial text at the end of the guideline.

   If no, **approve for 12 weeks by GPID or GPI-14 for all strengths as follows:**
   - **100mg-40mg tablet: #3 per day.**
   - **50mg-20mg pellets: #5 per day.**
